

1 IPP Notification New Model

2 From: Tom Hastings
3 Date: 8/1107/99
4 File: ipp-notification-new-model-99081107.doc

5 This document is a new proposal to simplify the IPP Notification Model. It uses Harry Lewis's suggested
6 terminology of Per-Job subscriptions and Per-Printer subscriptions. The Subscription object is defined only
7 for use as Per-Printer subscriptions. Per-Job subscriptions are done entirely with Job attributes and use an
8 exclude event mask (like SNMPv3 trap subscriptions) in order to allow different recipients to get different
9 events. I've also added conformance requirements for operations and attributes, so that we can more
10 properly reason about the model, before updating the specification document.

11 This document also includes the results of the 8/114/99 IPP telecon.

12 **There are 14 issues highlighted like this that need to be resolved.**

13 This paper uses object modeling techniques to describe the current IPP Notification Specification object
14 model (July 22, 1999):

15 ftp://ftp.pwg.org/pub/pwg/ipp/new_NOT/ipp-notification-990722.pdf

16 Review of this object model before writing the complete spec will help speed up the production of the spec
17 and will also help with the understanding of the semantics. I suggest that this modeling be kept in the final
18 spec in some form similar to this paper.

19 This paper also gives an outline of how the final spec might be presented, including being divided into two
20 parts. After describing the additional object attributes for the Job, Printer, and Subscription objects, the
21 order of the spec is suggested to be:

- 22 1. the REQUIRED first part (sections 5, 6, and 7) defines the extensions to the Job and Printer object
23 and its operations for Per-Job subscriptions of Job and Printer events and their notification content.
- 24 2. the OPTIONAL second part (section 8) defines the Per-Printer subscription mechanism and the
25 Subscription object and its operations and attributes.

26 ***NOTE - Throughout this model document, the notation [] indicates that the sender (client in a
27 request, IPP object in a response, Notification Sender in a notification) MAY omit the attribute
28 inside the square brackets if there is not data to send. In addition, IPP Printer conformance
29 requirements for operation and attribute support are indicated in this document with the words and
30 codes:***

31 ***REQUIRED (R) to support notification at all***
32 ***CONDITIONALLY REQUIRED (C) - REQUIRED if Per-Printer subscription is supported***
33 ***OPTIONAL (O) - not required for either Per-Job or Per-Printer Subscriptions.***

34 ***Therefore, the [] do NOT mean OPTIONAL support and should not be confused with support***
35 ***requirements.***

71

72 1 Current IPP Notification Operations

73 The current IPP Notification specification (July 22, 1999) consists of the Job object and the Printer object.
74 A Job object contains zero or one Per-Job Subscription which specifies Job and/or Printer events. The Job
75 events apply only to this Job. The Printer events apply no matter which job. A Printer object contains zero
76 or more Per-Printer Subscriptions which specify Job and/or Printer events. The Job and Printer events
77 apply no matter which job.

78 The following operations are defined for Per-Job Subscriptions and Per-Printer Subscriptions:

79 1.1 Per-Job Subscriptions - previous model

Job object related:	salient inputs besides printer-uri:
job creation operations	recipients, [events,] [user-data]
Subscribe-Job	job-id, recipients, [events]
Get-Job-Attributes	job-id, [requested-attributes]
Unsubscribe-Job	job-id, subscription-id

80 1.2 Per-Printer Subscriptions - previous model

Printer object related:	salient inputs beside printer-uri:
Get-Printer-Attributes	[requested-attributes]
Renew-Printer-Subscription	[lease time]
Get-Printer-Subscriptions	[my-subscriptions]

81 2 New IPP Notification Operations

82 This new proposed IPP object model add the Subscription object (to the Job and Printer objects), but only
83 for the Per-Printer subscriptions.

84 The following operations are defined for Per-Job Subscriptions and Per-Printer Subscriptions:

85 2.1 Per-Job Subscriptions - new model

Job object related:	salient inputs besides printer-uri
job creation operations	recipients, [events,] [user-data,] [exclude-event-mask]
Get-Job-Attributes	job-id, [requested-attributes]
Replace Set-Job-Subscription	job-id, [recipients,] [events,] [user-data,] [exclude-event-mask]

86

87 **2.2 Per-Printer Subscriptions - new model**

Printer object related:	salient inputs beside printer-uri:
Get-Printer-Attributes	[requested-attributes]
Subscription object related:	salient inputs besides printer-uri:
Create-Printer-Subscription	recipients, [events,] [user-data,] [exclude-event-mask,] [lease-time- <u>requested</u>]
Get-Printer-Subscription-Attributes	subscription-id, [requested-attributes]
Get-Printer-Subscriptions	[my-printer-subscriptions,] [requested-attributes]
Renew-Printer-Subscription	subscription-id, [lease time- <u>requested</u>]
Cancel-Printer-Subscription	subscription-id

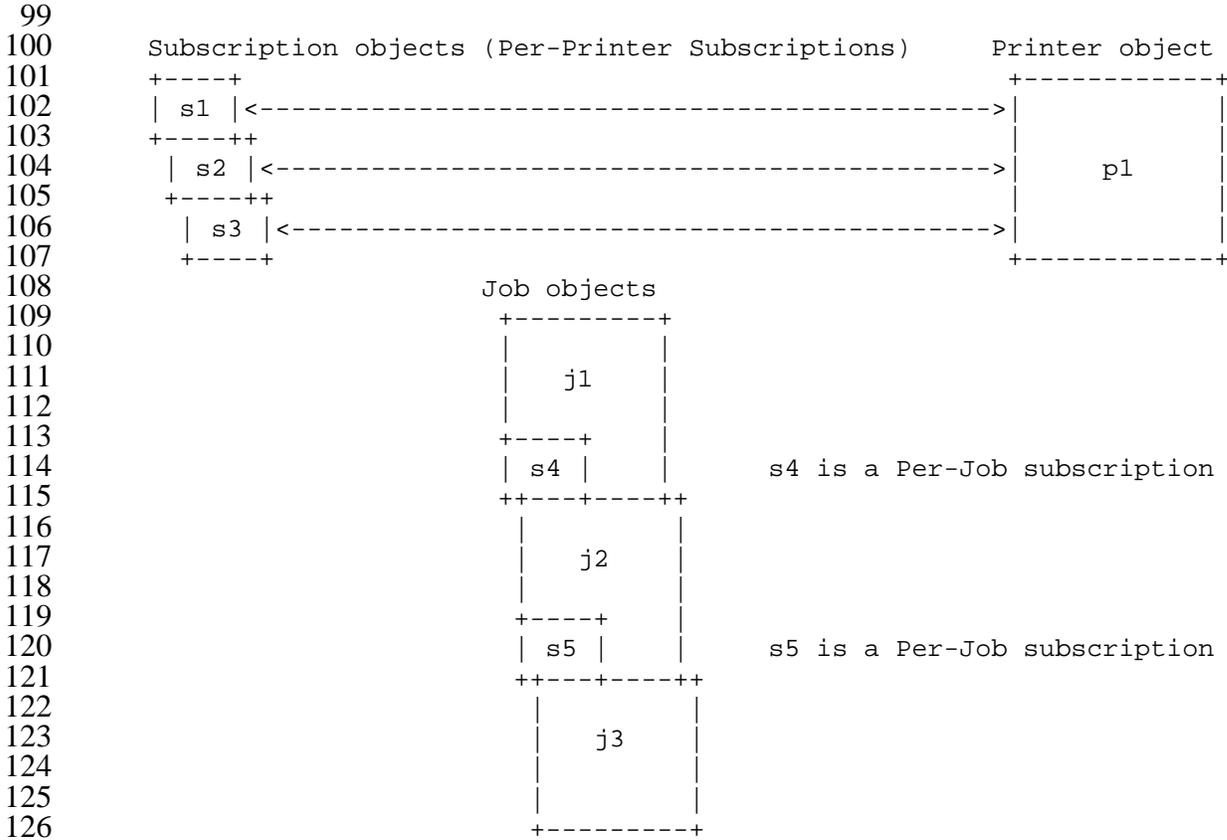

88 **ISSUE 1 - If IPP is generalized to multi-function devices, will we regret having "Printer" in the names of**
89 **these operations that could work for any type of device?**

90 **3 Job, Printer, and Subscription object relationships**

91 This section describes the new notification object model that adds a Subscription object which together
92 with the Job and Printer object provide the complete notification semantics. The Subscription object is
93 OPTIONAL. The Subscription object MUST be supported if Per-Printer subscriptions are supported and
94 vice-versa.

95 Per-Job subscriptions do not use the Subscription object. Instead, a Job can have one Per-Job subscription
96 which is represented entirely as Job attributes. A "notify-event-exclude-mask" attribute allows some of the
97 specified events to be excluded from some of the specified Notification Recipients in the Job subscription.

98 The object relationships can be seen pictorially as:

127 s1, s2, and s3 are Per-Printer Subscription objects and can identify Printer and/or Job events.

128 s4 and s5 are Per-Job subscriptions (not objects) and can identify Printer and/or Job events.

129 3.1 Object relationships

130 The object relationships can be stated as follows:

- 131 1. The Printer object contains zero or more Subscription objects (p1 contains s1-s3 Subscription
- 132 objects).
- 133 2. Each Subscription object (s1, s2, and s3) is contained in one Printer object (p1) and represents one
- 134 Per-Printer subscription.

135 ~~Each Subscription object (s1, s2, and s3) represents one Per-Printer subscription.~~

- 136 3. Each "Per-Printer" Subscription object identifies one or more Job and/or Printer events. Such Job
- 137 events are for *all* jobs on the Printer. Such Printer events are for *any* Printer event, no matter which
- 138 job is processing and when no jobs are processing.
- 139 4. The "Per-Job" subscription (not an object by itself, but is attributes of the Job object) identifies one
- 140 or more Job and/or Printer events. Such Job events are only for *this* job (different than "per-Printer"

141 Subscriptions). Such Printer events are for *any* Printer event, no matter which job and when no jobs
 142 are processing (same as for "per-Printer" Subscriptions).

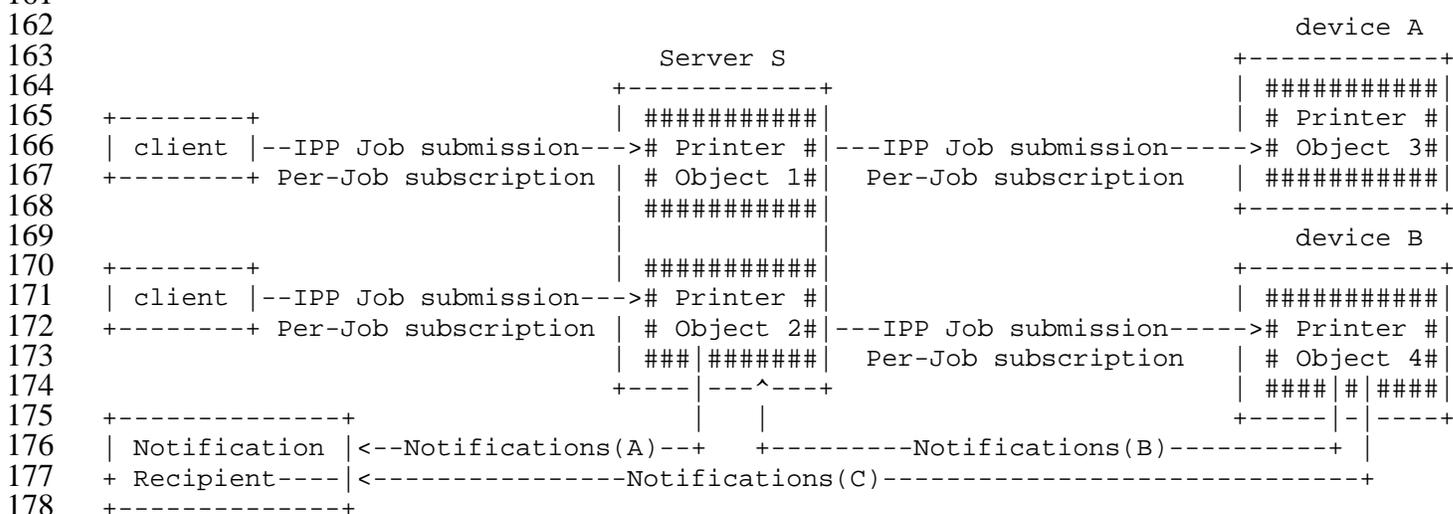

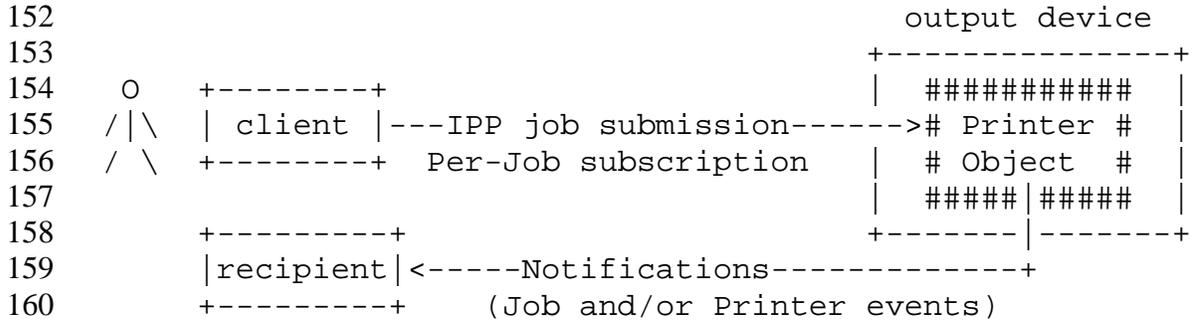

143 5. A Job object contains zero or one Per-Job subscriptions (not an object). (Job j1 contains Per-Job
 144 subscription s4, Job j2 contains Per-Job subscription s5, and Job j3 does not contain a Per-Job
 145 subscription.

146 6. A Subscription object cannot be contained in or associated with more than one Printer object.

147 **3.2 Notification Configurations for Per-Job Subscriptions**

148 This section describes several configurations of IPP Printer objects that are intended to be able to make use
 149 of Per-Job subscriptions. Per-Printer Subscriptions may be used in addition, but are not shown to simplify
 150 the pictures and understanding.

151 embedded printer:

179 The first configuration show a simple Client - Printer relationship. The Printer delivers the Notifications to
 180 the Notification Recipient(s) supplied by the Client.

181 The second configuration shows a (spooling or non-spooling) Server that implements two Printer objects (1
 182 and 2) that represent two devices that in turn each implement an IPP Printer object (3 and 4, respectively).
 183 The server implements one IPP Printer object (1 and 2) for each such device. The Server implementation
 184 has three choices for how to support Per-Job subscriptions to the client (and itself):

- 185 1. forward the Per-Job subscriptions to the down stream IPP Printer and let it perform the
 186 notification directly to the Notification Recipients supplied by the Client (Notifications(C)) and
 187 use Per-Printer Subscriptions for the Server's own purposes.
- 188 2. save the client-supplied Per-Job subscription on the Job object in the server and substitute its
 189 own Per-Job subscription with the Server as the Notification Recipient (Notifications(B)). Then
 190 the Server relays Notifications to the client-supplied Notification Recipients (Notifications(A)).
- 191 3. A combination of 1 and 2 in which the Server adds its own Per-Job subscriptions to those
 192 supplied by the client. Thus the IPP Job that goes to Printer object 4 has a combination of
 193 subscription information from both the Client and the Server. This latter approach is sometimes
 194 called "piggy-backing" because the Server is adding its Per-Job subscription information to that
 195 supplied by the client. Piggy-backing is especially useful, if device B also accepts (IPP or non-
 196 IPP) requests from other servers. Then when all the jobs from Server S have been completed by
 197 device B, there will be no more Job events sent to Server S. (Server S could still maintain a
 198 long term Per-Printer subscription with Printer D to that Server S can have Printer B's state track
 199 (shadow) that of Printer D or Server S could poll Printer D when queried about Printer B).

200 4 Object attributes defined for Notification

201 The following notification attributes are defined for each of the Printer, Job, and (new, but OPTIONAL)
 202 Subscription objects. The explanations about some of the object attributes are collected here so that they
 203 can be referred to from the operations that set them. All Job, Printer, and Subscription object attributes are
 204 READ-ONLY, i.e., they MUST NOT be settable with the Set-Job-Attributes or Set-Printer-Attributes
 205 operations. Instead, all of them are set as a side effect of another operation or when an event notification is
 206 delivered. Attributes and objects not in the current, July 22, spec are labeled as "new":

207 4.1.1 Job object attributes related to notification

Job object attributes:	Printer support	READ-ONLY, set by:
notify-recipients (1setOf uri)	R	job creation operation
notify-events (1setOf type2 keyword)	R	job creation operation
notify-user-data (octetString(63255))	R	job creation operation
notify-exclude-event-masks (1setOf octetString(8))	R \emptyset	job creation operation
<u>notify-natural-languages</u> (1setOf naturalLanguage)	<u>O</u>	<u>job creation operation</u>

208

job-trigger-event (type2 keyword)	<u>R</u>	Printer - event occurring
job-trigger-message (text(255))	R	Printer - event occurring
job-trigger-time (integer(MIN:MAX))	R	Printer - event occurring
job-trigger-date-time (dateTime)	O	Printer - event occurring
<u>notify-request-ids</u> (1setOf integer(0:MAX))	<u>C</u>	<u>Printer - event occurring</u>
previous-job-state (type1 enum)	R	Printer - event occurring
job-state-reasons-added (1setOf type2 keyword)	R	Printer - event occurring
job-state-reasons-deleted (1setOf type2 keyword)	R	Printer - event occurring

209 ISSUE 2 - Is there value for a Notification Recipient (or other client) to be able to query the Job and
210 determine the most recent sent Event Notification and the time (and date-time) that it was sent or should
211 these three Job Description attributes (job-trigger-event (type2 keyword), job-trigger-time
212 (integer(MIN:MAX)), and job-trigger-date-time (dateTime)) be removed from the spec?

213 Attribute Notes:

214 "notify-user-data" (octetString(63255)) - information being sent from the Subscriber to the Notification
215 Recipient(s), such as the identify of the Subscriber or a path or index to some Subscriber
216 information or a key that the Notification Recipient needs in order to process the Notification. This
217 information is the same for all Notification Recipients. Per-Notification Recipient data should be
218 specified in the URL registration so that they may be sent as parameters in each URL ~~could identify~~
219 ~~the real recipient, in case the Notification Recipient is a general recipient tool, such as Tool Talk or~~
220 ~~an Instant Message Service.~~
221 ~~ISSUE 1 is 255 octets too long for "notify-user-data (octetString(255))", since it also has to be sent~~
222 ~~in the notification content? How about 64 octets?~~

223 "notify-exclude-event-masks" (1setOf octetString(8)) - an ~~OPTIONAL~~ **REQUIRED** per-recipient event
224 mask whose values are parallel to the "notify-recipients" attribute. Each 1 bit indicates that the
225 corresponding recipient is not to receive the 'i'-th event specified in the "notify-events" attribute.
226 The first event in "notify-events" is numbered '1' which corresponds to the first bit (Big Endian
227 network order) of the event mask octetString. If an implementation only supports n events, then the
228 maximum number of octets that an implementation need support for this attribute is not really 8
229 octets, but is n mod 8.
230 ~~The exclude event mask concept is also used in SNMPv3 trap registration (RFC2573).~~ **ISSUE 2 -**
231 ~~Should "notify-exclude-event-masks (1setOf octetString(8))" be REQUIRED if the number of~~
232 ~~Notification Recipients supported in a Per Job (or Per Printer) Subscription is greater than 1 (as~~
233 ~~specified in the Printer's "max-notification-recipients-supported" attribute)?~~

234 "notify-natural-languages" (1setOf naturalLanguage) - an **OPTIONAL** per-recipient natural language
235 specification whose values are parallel to the "notify-recipients" attribute.

236 **ISSUE 3** - OK to add the **OPTIONAL** "notify-natural-languages" (1setOf naturalLanguage) to the Job
237 object and the Job Creation operations, as long as it is **OPTIONAL** for a Printer to support?

238 "job-trigger-event" (type2 keyword) - the last Job event that was sent in a Notification for this Job's Per-Job
239 subscription. A value of 'none' is used if the job has not yet had a Job event Notification sent.

240 "job-trigger-time" (integer(MIN:MAX)) - the time (using the "printer-up-time" form) that the last Job event
241 was sent in a Notification for this Job's Per-Job subscription. A value of 0 is used if the job has not
242 yet had a Job event Notification sent.

243 "job-trigger-date-time" (dateTime) - the date-time that the last Job event was sent in a Notification for this
244 Job's Per-Job subscription. A value of 0 is used if the job has not yet had a Job event Notification
245 sent.

246 "notify-request-ids" (1setOf integer(0:MAX)) - the most recent request-ids delivered in a Job Notification
247 content for a Per-Job Subscription for this Job for each of the Job's Notification Recipients. In other

words, the "notify-request-ids" is a parallel attribute to the Job's "notify-recipients (1setOf uri) attribute. A value of 0 indicates that no Notifications have been sent for this Job. The first request-id sent for a job MUST be 1. The reason to have a separate request-id for each recipient is so that when more than one Notification Recipient is specified in a subscription, each recipient will have its own monotonically increasing set of request-ids, i.e., no gaps, in order to be able to detect a missing notification

~~job-state-reasons-added (1setOf type2 keyword) and job-state-reasons-deleted (1setOf type2 keyword) – ISSUE 3 – why not just "previous-job-state-reasons" instead of "job-state-reasons-added" and "job-state-reasons-deleted" attributes as Job Description attributes?~~

4.1.2 Printer object attributes related to notification

Printer object attributes:	Printer support	READ-ONLY, set by:
notify-schemes-supported (1setOf uriScheme)	R	Administrator/implementation
max-notification-recipients-supported (integer(1:MAX))	R	Administrator/implementation
notify-events-default (1setOf type2 keyword)	R	Administrator/implementation
notify-events-supported (1setOf type2 keyword)	R	Administrator/implementation
<u>max-recipients-supported (integer(0:MAX))</u>	<u>R</u>	<u>Administrator/implementation</u>
max-events-supported (integer(5:MAX))	R	Administrator/implementation
notify-lease-time-supported (rangeOfInteger(0:MAX))	C	Administrator/implementation
notify-lease-time-default (integer(0:MAX))	C	Administrator/implementation
max-printer-subscriptions-supported (integer(0:MAX))	C	Administrator/implementation
<u>persistent-subscriptions-supported (boolean)</u>	<u>O</u>	<u>Administrator/implementation</u>

Attribute Notes:

"notify-schemes-supported" (1setOf uriScheme) - the schemes that are supported in Per-Job and Per-Printer "notify-recipients" operation attributes.

~~"max-notification-recipients-supported"~~ (integer(1:MAX)) - the maximum number of Notification Recipients that are supported in a Per-Job Subscription and in each Per-Printer Subscription, if supported are supported this same number applies. A value of 0 indicates no effective maximum. An implementation MUST support at least 3+ Notification Recipients per subscription, so that clients can depend on at least that number of recipients in a single subscription. If notification is not supported, this attribute MUST NOT be supported.

"max-events-supported" (integer(~~0~~5:MAX)) - the maximum number of events that are supported in a Per-Job subscription and in each Per-Printer Subscription object, if supported. A value of 0 indicates no effective maximum. If Per-Printer subscriptions are supported this same number applies. An implementation MUST support at least 5 events per subscription, so that clients can depend on at least 5 events in a single subscription. If notification is not supported, this attribute MUST NOT be supported.

273 "notify-lease-time-supported" (rangeOfInteger(0:MAX)) - the minimum and maximum lease time values
 274 supported for "notify-lease-time-requested" operation attributes. When the lease time expires for a
 275 Per-Printer Subscription without renewing, the Printer MUST delete the Subscription object. A
 276 value of 0 indicates an infinite amount of time, i.e., no lease. No lease MAY require authorization.

277 "max-printer-subscriptions-supported" (integer(0:MAX)) - the maximum number of Per-Printer
 278 subscription supported. 0 means there is no limit, if Per-Printer subscriptions are supported. An
 279 implementation MUST support at least 8 Per-Printer Subscription object instances, if it supports
 280 Per-Printer subscriptions, so that clients can depend on at least 8 Per-Printer Subscriptions. If
 281 notification is not supported, this attribute MUST NOT be supported.

282 "persistent-subscriptions-supported" (boolean) - indicates whether or not the Printer supports persistent Per-
 283 Printer Subscriptions, i.e., subscriptions that are preserved across power cycles. If the value is
 284 'false' or that attribute is not supported, Per-Printer Subscriptions MUST NOT be persistent.

285 4.1.3 Subscription object attributes (new and OPTIONAL)

Subscription object attributes:	Printer support	READ-ONLY, set by:
notify-recipients (1setOf uri)	C	client - Create-Printer-Subscription
notify-events (1setOf type2 keyword)	C	client - Create-Printer-Subscription
notify-user-data (octetString(255))	C	client - Create-Printer-Subscription
notify-exclude-event-mask (1setOf octetString(8))	R⊖	client - Create-Printer-Subscription
<u>notify-natural-languages (1setOf naturalLanguage)</u>	<u>O</u>	<u>client - Create-Printer-Subscription</u>

<u>subscription-id (integer(1:MAX))</u>	<u>C</u>	<u>Printer - Create-Printer-Subscription</u>
notify-lease-time-remaining (integer(0:MAX))	C	Printer - Create-Printer-Subscription
notify-lease-time-granted (integer(0:MAX))	C	<u>client-Printer</u> - Create-Printer-Subscription
subscriber-user-name (name(MAX))	C	Printer - Create-Printer-Subscription

<u>most-recent</u> notify-request-ids (1setOf integer(0:MAX))	C	Printer - event occurring
delivery-failure-count (integer(0:MAX))	C	Printer - event occurring

288 ISSUE 4 - It isn't necessary to add a "persistence (boolean)" attribute to the Subscription object in order to
 289 record the value passed in the Create-Printer-Subscription operation and to allow it to be queried?

290 Attribute Notes:

291 "notify-user-data" (octetString(255)) - same as the "notify-user-data" Job Description attribute (see section
 292 4.1.1).

293 "notify-exclude-event-mask" (1setOf octetString(8)) - same as the "notify-exclude-event-mask" Job
 294 Description attribute (see section 4.1.1).

295 "notify-natural-languages (1setOf naturalLanguage)" - same as the "notify-natural-languages" Job
296 Description attribute (see section 4.1.1).

297 **ISSUE 5 - OK to add the OPTIONAL "notify-natural-languages" (1setOf naturalLanguage) to the**
298 **Subscription object and the Create-Printer-Subscription operation, as long as it is OPTIONAL for a**
299 **Printer to support?**

300 "subscription-id (integer(1:MAX)) - the subscription id of this Subscription object instance.

301 "notify-lease-time-remaining" (integer(0:MAX)) - the time in the future when the subscription lease will
302 expire, i.e., the "printer-up-time" value number of seconds remaining in at which the lease will
303 expire. When the Printer counts the value down to 0 indicated time arrives, the Printer MUST delete
304 the Per-Printer Subscription object. A client is able to extend a lease using the Renew-Printer-
305 Subscription operation (see section 8.4). Internally, the implementation may have a more absolute
306 representation of when the lease expires, but this relative value is returned to help the client know
307 how much more time is remaining in the lease. —A value of 0 indicates an infinite name time, if such
308 a policy is supported as indicated in the "notify-lease-time-supported (integer(0:MAX)) Printer
309 Description attribute and the subscriber is authorized to request an infinite lease.

311 Note: In order to compute the number of seconds remaining in a Per-Printer Subscription lease, a
312 client can subtract the "printer-up-time" Printer object attribute from the "notify-lease-time"
313 Subscription object attribute.

314 **ISSUE 6 - Should we provide a way for the client to get the "printer-up-time" in a Get-Printer-**
315 **Subscriptions operation, so that the client doesn't have to make two requests?**

316 "notify-lease-time-granted" (integer(0:MAX)) - the number of seconds granted for the subscription when it
317 was created. It is used to restore the subscription on the Restart-Job and Reprocess-Job operations.
318 A 0 value indicates infinite time was granted.

319 "most-recent-notify-request-ids" (1setOf integer(0:MAX)) - the request-ids that was/were delivered in the
320 most recent Notifications for the Per-Printer subscription for each of the Notification Recipients in
321 the corresponding parallel "notify-recipients" (1setOf uri) attribute. A value of 0 indicates that no
322 Notifications have been sent for this Per-Printer Subscription to the corresponding recipient. The
323 first request-id sent to a Recipient for this Per-Printer Subscription MUST be 1. The reason to have
324 a separate request-id for each recipient is so that when more than one Notification Recipient is
325 specified in a subscription, each recipient will have its own monotonically increasing set of request-
326 ids, i.e., no gaps, in order to be able to detect a missing notification. If an implementation doesn't
327 support more than one Notification Recipient then this attribute only has one value as well.

328 "delivery-failure-count" (integer(0:MAX)) - the number of transport delivery failures in delivering a
329 notification to any of the "notify-recipients" using the transport indicated. Note: for the current
330 delivery methods envisioned (see Notification Requirements [ipp-req], Notification Recipients do
331 not respond to the Notification Source, so this count is not the number of unacknowledged
332 notifications.

333 5 Events

334 Events are defined to be non-overlapping. So for example, 'job-state-changed' doesn't include creating the
335 job or completing the job. This reduces the need to batch events together, since events tends to happen at
336 different times by definition.

337 Both Job and/or Printer events may be specified for Per-Job or Per-Printer subscriptions:

338 Job events in a Per-Job subscription indicate Job events for *this* job only

339 Job events in a Per-Printer subscription indicates Job events for *all* jobs

340 Printer events in a Per-Job subscription indicate Printer events for *any* job

341 Printer events in a Per-~~Job~~ Printer subscription indicate Printer events for *any* job

342 ~~ISSUE 4—Should we disambiguate the 'job-xxx' events and double the number by renaming to 'my-~~
343 ~~job-xxx' and 'all-job-xxx' events for use in both Per-Job and Per-Printer subscriptions?~~

344 5.1 Job events

345 '**none**': REQUIRED - no notifications of any events

346 ~~ISSUE 5—Add a 'job-announce' event which is sent to the Notification Recipient(s) when the~~
347 ~~subscription is accepted to prepare/warn them?~~

348 '**job-created**': REQUIRED - the Printer object has accepted Create-Job, Print-Job, or Print-URI.

349 '**job-completed**': REQUIRED - the job has reached 'completed', 'aborted', or 'canceled'.

350 '**job-state-changed**': REQUIRED - any job state or state-reason changed, except when the job is
351 created or when the job moves to 'completed', 'aborted', or 'canceled'.

352 '**job-config-changed**' - "job-message-from-operator" or any of the non-READ-ONLY Job attributes
353 changed, typically through the Set-Job-Attributes operation.

354 '**job-purged**' - Job-Purged operation on a 'not~~n~~-completed' job.

355 '**job-progress**' - sheet or copy completed. See separate [ipp-prog] spec.

356 5.2 Printer events

357 '**none**' - REQUIRED - no notification of any events

358 'printer-announce' - a Per-Job or Per-Printer subscription has been accepted. Specified by a
359 Subscriber that wishes to warn the Notification Recipient that other Printer events are forth
360 coming.

361 ~~ISSUE 6—Add a 'printer-announce' event which is sent to the Notification Recipient(s) when the~~
362 ~~subscription is accepted to prepare/warn them?~~

363 '**printer-restarted**' - device powered up or Restart-Printer operation is performed (see [ipp-adm]).

364 '**printer-shutdown**' - device is being powered down or the Shutdown-Printer operation [ipp-adm]).

365 '**printer-state-changed**' - REQUIRED - "printer-state", "printer-state-reasons", and/or "printer-is-
366 accepting-jobs" attributes changed, except when the Printer starts up or is shutdown.

367 '**printer-media-changed**' - when the media loaded ("media-ready") on a printer has been changed.

368 '**printer-config-changed**' - "printer-message-from-operator" or any non-READ-ONLY Printer
369 attributes changed, except for "media-ready" (which has its own event), whether through the
370 Set-Printer-Attributes operation or by other means and whether initiated by a human or not.

371 'printer-queue-changed' - the order of jobs in the Printer's queue has changed, so that an
372 application that is monitoring the queue can perform a Get-Jobs operation to determine the new
373 order. This event does not include when a job enters the queue (the 'job-created' event covers
374 that) and does not included when a job leaves the queue (the 'job-completed' event covers that).

375 'printer-no-longer-full' - the Printer may still be printing but has acquired more buffer space to
376 accept jobs. This event only occurs when the Printer did not have room to accept jobs
377 previously and rejected a Print-Job, Print-URI, Create-Job, Send-Document, or Send-URI
378 operation from any client (desktop or Server).
379 'printer-almost-idle' - the Printer needs another Job in order to stay busy. Typically sent to a
380 Server that has subscribed.

381 **6 Notification Content**

382 **ISSUE 7** - How is the User Friendly notification represented, such as is used with the 'mailto:' notification
383 delivery scheme? What parts gets translated into the Natural Language of the subscriber (presumed to be
384 the same as the recipient), besides the "job-trigger-message" and "printer-trigger-message"? The idea of
385 using multipart/report has problems going through firewalls because of attachments, so maybe we need a
386 single text message that can be read by humans, and still be parsed by programs for some of the (un-
387 translated) keywords attribute names. Perhaps, the trigger-message contains user friendly stuff like job-
388 name, printer-name, and the translated job-state and state-reasons values and the rest of the message is a
389 series of lines of the form:

390 `keyword: text`

391 where 'keyword' is the un-translated (i.e, U.S. English) attribute keyword name and the text is the
392 representation of the attribute values. Which attributes would be required beside the "job-trigger-message"
393 and "printer-trigger-message"?

394 The notification content is the same for the current and new models. All attributes indicated are
395 REQUIRED for *all* events, unless inside [] or the comment indicates otherwise:

396 **6.1 Job Event Notification content**

397 The following notification content is sent for both Per-Job and Per-Printer Subscriptions when a Job event
398 occurs (see section 5.1 for Job events):

ISSUE 8 - Most transports only allow 500 to 1000 octets in a packet we have too much stuff.

version-number (integer (0:32767))
status-code (integer (0:32767)) - with the value: basic-job-event(600)
request-id (integer (1:MAX)) - used as notification delivery sequence number for each recipient
attributes-charset (charset)
attributes-natural-language (naturalLanguage) from "notify-natural-languages" if supported
[subscription-id (integer(1:MAX))] MUST if from a Per-Printer subscription
job-printer-uri (uri)
printer-name (name(127))
job-id (integer(1:MAX))
job-name (name(MAX))
job-trigger-event (type2 keyword)
~~[job-trigger-message (text(255))]~~
ISSUE 9 - is 255 too long for "job-trigger-message (text(255))", since it also has to be sent in the notification content?
ISSUE 10 - How to include user friendly data, like job name, job owner, printer name, date, time, and event name in a Job event notification?
ISSUE 11 - Should we REQUIRE the "printer-trigger-message" to contain the user friendly data localized information about this event, namely: like job name, job owner, printer name, date, time, and event name and REQUIRE "printer-trigger-message"?
job-trigger-time (integer(1:MAX)) SNMP traps automatically includes
[job-trigger-date-time (dateTime)]
job-state (type1 enum)
~~previous-job-state (type1 enum) not for 'job-completed' event~~
job-state-reasons (1setOf type2 keyword)
~~job-state-reasons-added (1setOf type2 keyword) not for 'job-completed' event~~
~~job-state-reasons-deleted (1setOf type2 keyword) not for 'job-completed' event~~
ISSUE 12 - in a Job notification why not just "previous-job-state-reasons" instead of "job-state-reasons-added" and "job-state-reasons-deleted"?
[job-impressions-completed (integer(0:MAX))] only for 'job-completed' event
[job-media-sheets-completed (integer(0:MAX))] only for 'job-completed' event
job-collation-type (type2 enum) only for 'job-progress' event
sheet-completed-copy-number (integer(-2:MAX)) only for 'job-progress' event
sheet-completed-document-number(integer(-2:MAX)) only for 'job-progress' event
impressions-interpreted (integer(-2:MAX)) only for 'job-progress' event
impressions-completed-current-copy (integer(-2:MAX)) only for 'job-progress' event

6.2 Printer Event Notification content:

The following notification content is sent for both Per-Job and Per-Printer Subscriptions when a Job event occurs (see section 5.2 for Printer events):

ISSUE 10 - Most transports only allow 500 to 1000 octets in a packet so we have too much stuff here.

version-number (integer (0:32767))
status-code (integer (0:32767)) - with the value: basic-job-event(601)
request-id (integer (1:MAX)) - used as notification delivery sequence number for each recipient
attributes-charset (charset)
attributes-natural-language (naturalLanguage) from "notify-natural-languages" if supported
[subscription-id (integer(1:MAX))] MUST if from a Per-Printer subscription
printer-uri (uri)
printer-name (name(127))
[job-id (integer(1:MAX))] MUST if from a Per-Job subscription
[job-name (name(MAX))] MUST if from a Per-Job subscription
printer-trigger-event (type2 keyword)
~~[printer-trigger-message (text(255))]~~
ISSUE 14 - is 255 too long for "printer-trigger-message (text(255))", since it also has to be sent in the notification content?
ISSUE 15 - How to include user friendly data, like printer name, date, time, and event name in a Printer event notification?
ISSUE 16 - Should we REQUIRE the "printer-trigger-message" to contain the user friendly data localized information about this event, namely: printer name, date, time, and event name and REQUIRE "printer-trigger-message"?
printer-trigger-time (integer(1:MAX)) SNMP traps automatically includes
[printer-trigger-date-time (dateTime)]
printer-state (type1 enum)
~~previous-printer-state (type1 enum)~~
printer-state-reasons (1setOf type2 keyword)
printer-is-accepting-jobs (boolean)
~~printer-state-reasons-added (1setOf type2 keyword)~~
~~printer-state-reasons-deleted (1setOf type2 keyword)~~
ISSUE 17 - in a Printer notification why not just "previous-printer-state-reasons" instead of "printer-state-reasons-added" and "printer-state-reasons-deleted"?

7 REQUIRED Per-Job Subscription mechanism

This section lists the REQUIRED operation requests and response that have some relation to notification, i.e., that are related to Per-Job subscription. Section 8 lists the OPTIONAL operation requests and responses associated with the OPTIONAL Per-Printer subscription and its Subscription object.

474 **7.1 Job Creation Operations (Create-Job, Print-Job, Print-URI) and Validate-Job**

475 As in the current notification spec (July 22, 1999), the usual method for a client to associate one
476 subscription with a Job is to specify the subscription when the job is created. For a Per-Job Subscription,
477 the client supplies the following notification operation attributes with any of the job creation operations
478 (Create-Job, Print-Job, Print-URI), plus Validate-Job (which doesn't create a job or subscription):

479	notify-recipients (1setOf uri)	REQUIRED for Printer to support
480	[notify-events (1setOf type2 keyword)]	REQUIRED for Printer to support
481	[notify-user-data (octetString(255))]	REQUIRED for Printer to support
482	[notify-exclude-event-mask (octetString(8))]	OPTIONAL REQUIRED for Printer to
483	support	
484	[notify-natural-languages" (1setOf naturalLanguage)]	OPTIONAL for Printer to support

485 [See section 4.1.1 for a definition of these operation attributes, since they are copied to the Job object as Job](#)
486 [Description attributes.](#)

487 **7.2 Get-Printer-Attributes operation**

488 The Get-Printer-Attributes can be used to request the additional Printer Description attributes that indicate
489 the notification supported. See section 4.1.2.

490 **7.3 Get-Job-Attributes operation**

491 The Get-Job-Attributes can be used to request the additional Job Description attributes that relate to
492 notification. See section 4.1.1.

493 **7.4 Set-Job-Subscription operation**

494 The Set-Job-Subscription operation allows a client to change the Job attributes of the Job's Per-Job
495 subscription, including to add them in the first place and to remove them from the Job object. This
496 operation replaces all the values of the supplied notification attributes: "notify-recipients", "notify-events",
497 "notify-user-data", and "notify-exclude-event-mask" Job attributes. Any notification attributes not supplied
498 are not affected. In order to cancel a Per-Job subscription, the client supplies the "notify-events" with a
499 'none' value. ISSUE 11 - or should canceling a Per-Job subscription be done by supplying the out-of-band
500 'no-value' value for "notify-recipients" in a Set-Job-Subscription operation, instead of 'none' to "notify-
501 events", since "notify-recipients" is the attribute that indicates that there is notification in a job creation
502 operation? In order to remove the user-data (octetString(63)), the client supplies an
503 octetString with zero length. In order to remove the "notify-exclude-event-mask (octetString(8))", the
504 client supplies a octetString with zero length.

505 Request :

<u>Group 1: Operation Attributes</u>	<u>Printer support</u>
<u>"attributes-charset"</u>	<u>R</u>
<u>"attributes-natural-language"</u>	<u>R</u>
<u>"printer-uri" (uri)</u>	<u>R</u>
<u>"requesting-user-name" (name(MAX))</u>	<u>RECOMMENDED</u>
<u>["notify-recipients" (1setOf uri)]</u>	<u>R</u>
<u>["notify-events" (1setOf type2 keyword)]</u>	<u>R</u>
<u>["notify-user-data" (octetString(255))]</u>	<u>R</u>
<u>["notify-exclude-event-mask" (1setOf octetString(8))]</u>	<u>R</u>
<u>["notify-natural-languages" (1setOf naturalLanguage)]</u>	<u>O</u>

506 Response :

<u>Group 1: Operation Attributes</u>	<u>Printer support</u>
<u>"status-code" (type2 enum)</u>	<u>R</u>
<u>"attributes-charset"</u>	<u>R</u>
<u>"attributes-natural-language"</u>	<u>R</u>
<u>["status-message" (text(255))]</u>	<u>O</u>
<u>["detailed-status-message" (text(MAX))]</u>	<u>O</u>
<u>Group 2: Unsupported Attributes</u>	<u>R</u>

507 See section 4.1.1 for a definition of these operation attributes, since they are copied to the Job object as Job
508 Description attributes.

509 **8 OPTIONAL Per-Printer Subscriptions and the Subscription object**

510 This section lists the operation requests and responses that MUST be supported if the OPTIONAL Per-
511 Printer Subscriptions are supported which REQUIRES that the Subscription object be supported and vice
512 versa.

513 **8.1 Create-Printer-Subscription operation**

514 The Create-Printer-Subscription operation creates a Per-Printer subscription by creating a Per-Printer
515 Subscription object which is added to the Printer object.

516 Request :

Group 1: Operation Attributes	Printer support
"attributes-charset" (charset)	R
"attributes-natural-language" (naturalLanguage)	R
"printer-uri" (uri)	R
["requesting-user-name" (name(MAX))]	RECOMMENDED
"notify-recipients" (1setOf uri)	R
["notify-events" (1setOf type2 keyword)]	R
["notify-user-data" (octetString(255))]	R
["notify-exclude-event-mask" (1setOf octetString(8))]	<u>R</u> ⊖
<u>["notify-natural-languages" (1setOf naturalLanguage)]</u>	<u>O</u>
["notify-lease-time-requested" (integer(0:MAX))]	R
<u>["notify-persistence" (boolean)]</u>	<u>O</u>

517 Response :

Group 1: Operation Attributes	Printer Support
"status-code" (type2 enum)	R
"attributes-charset" (charset)	R
"attributes-natural-language" (naturalLanguage)	R
["status-message" (text(255))]	O
["detailed-status-message" (text(MAX))]	O
"subscription-id" (integer(1:MAX))	R
"notify-lease-time" (integer(0:MAX))	R
"notify-lease-time-remaining-granted" (integer(0:MAX))	R
Group 2: Unsupported Attributes	R

518 Attribute Notes:

519 "notify-lease-time-requested" (integer(0:MAX)) - the number of seconds requested for the Per-Printer
520 subscription lease. A value of 0 indicates a request that the Per-Printer Subscription lease never
521 expire. Supplying a 0 value MAY require authentication in order to be used, if 0 is supported at all.

522 "notify-persistence" (boolean) - whether or not the Per-Printer Subscription is to be persistent, i.e., saved
523 across power cycles. Persistent trap registrations is a client option in SNMPv3 [RFC2573].
524 ISSUE 12 - Ok to have added the OPTIONAL "notify-persistence" (boolean) operation attribute to
525 the Create-Printer-Subscription operation?

526 "notify-lease-time" (integer(0:MAX)) - the time in the future at which the subscription lease will expire,
527 i.e., the "printer-up-time" value (in time ticks) at which the lease will expire. A value of 0 indicates
528 that the lease subscription will never expire.

529 A "notify lease time" and "notify lease time remaining" of 0 means infinite, i.e., the Per-Printer
530 Subscription has no lease. Supplying a 0 value MAY require authentication in order to be used
531 when supported at all.

532 The Printer object MUST return the "notify-lease-time-granted" - number of seconds of time actually
533 granted. The value of "notify-lease-time-granted" which may be less than the requester requested in
534 the "notify-lease-time-requested" if it was greater than the MAX supported or more than the

535 requester requested if it was less than the MIN supported, as indicated in the Printer's "lease-time-
536 supported" (rangeOfInteger(0:MAX)) attribute.

537 ~~The Printer object MUST return the "notify lease time remaining" which is the number of seconds~~
538 ~~remaining in the lease.~~

539 **8.2 Get-Printer-Subscription-Attributes operation**

540 The Get-Printer-Subscription-Attributes returns the requested attributes of the identified Per-Printer
541 Subscription object. See section 4.1.3.

542 Request:

Group 1: Operation Attributes		Printer support
	"attributes-charset"	R
	"attributes-natural-language"	R
	"printer-uri" (uri)	R
	["requesting-user-name" (name(MAX))]	RECOMMENDED
	"subscription-id" (integer(1:MAX))	R
	["requested-attributes" (1setOf type2 keyword)]	R

543 Response:

Group 1: Operation Attributes		Printer support
	"status-code" (type2 enum)	R
	["status-message" (text(255))]	O
	["detailed-status-message (text(MAX))]	O
	"attributes-charset"	R
	"attributes-natural-language"	R
Group 2: Unsupported Attributes		R
Group 3: <the requested Subscription object attributes>		R

544 This operation is similar to the Get-Printer-Attributes operation. If the client omits the "requested-
545 attributes" operation attribute, the Printer MUST respond as if the client had supplied the 'all' value, i.e.,
546 return all of the attributes supported for the Subscription object.

547 **8.3 Get-Printer-Subscriptions operation**

548 The Get-Printer-Subscriptions operation returns Per-Printer subscriptions, i.e., Subscription objects.

549 Request :

Group 1: Operation Attributes		Printer support
	"attributes-charset"	R
	"attributes-natural-language"	R
	"printer-uri" (uri)	R
	["requesting-user-name" (name(MAX))]	RECOMMENDED
	["limit" (integer(1:MAX))]	R
	["requested-attributes" (1setOf type2 keyword)]	R
	["my-subscriptions" (boolean)]	R

550 Response :

Group 1: Operation Attributes		Printer support
	"status-code" (type2 enum)	R
	"attributes-charset"	R
	"attributes-natural-language"	R
	["status-message" (text)]	O
	["detailed-status-message" (text(MAX))]	O
Group 2: Unsupported Attributes		R
Group 3 to N:<the requested Subscription Attributes for each Subscription object in a separate group>		R

551

552 Notes: This operation is similar to the Get-Jobs operation. If the client wants any attributes returned,
 553 including the "subscription-id", it must include the attribute keyword name in the "requested-attributes"
 554 operation attribute. If the "requested-attributes" operation attribute is omitted, the Printer MUST respond as
 555 if the client supplied the value: 'subscription-id'.

556 **8.4 Renew-Printer-Subscription operation**

557 The Renew-Printer-Subscription operation permits a client to request the IPP Printer to extend the lease on
 558 a Per-Printer Subscription object instance.

559 Request :

Group 1: Operation Attributes	Printer support
"attributes-charset"	R
"attributes-natural-language"	R
"printer-uri" (uri)	R
"requesting-user-name" (name(MAX))	RECOMMENDED
"subscription-id" (integer(1:MAX))	R
"notify-lease-time-requested" (integer(0:MAX))	R

560 Response :

Group 1: Operation Attributes	Printer support
"status-code" (type2 enum)	R
"attributes-charset"	R
"attributes-natural-language"	R
["status-message" (text(255))]	O
["detailed-status-message" (text(MAX))]	O
"notify-lease-time" (integer(0:MAX))	R
"notify-lease-time-remaininggranted" (integer(0:MAX))	R
Group 2: Unsupported Attributes	R

561 Notes: The Printer object MUST return the "notify-lease-time-granted" which is the number of seconds
 562 actually granted. This value which MAY be less than the requester requested if it was greater than the
 563 MAX supported or more than the requester requested if it was less than the MIN supported, as indicated in
 564 the Printer's "lease-time-supported" (rangeOfInteger(0:MAX)) attribute.

565 The Printer object MUST return the "notify-lease-time-remaininggranted" which is the number of seconds
 566 remaining in the lease and the "notify-lease-time" which is the time in the future, i.e., the value of the
 567 Printer's "printer-up-time" (time-ticks) that the notification will be canceled by the Printer.

568 Note: There is no way to change any of the Subscription object attributes, except the "notify-lease-time"
 569 attribute. In order to change other attributes, a client can create a new Subscription object and then use
 570 Cancel-Printer-Subscription operation to cancel the old one (or do this in the other order, in case there is a
 571 limit on the number of Subscription object instances, as long as a short window with no Notifications is
 572 ok).

573 ISSUE 13 - What happens if the client supplies a 0 for the "notify-lease-time-requested" operation
 574 attribute? Does that result in a canceling of the Subscription? Is that ok? Ok to keep Cancel-Printer-
 575 Subscription operation too?

576 ISSUE 14 - Ok that Renew-Printer-Subscription doesn't allow any modification of the Subscription object
 577 attributes, except the "notify-lease-time" attribute? If we need a way to change other attributes would we
 578 add it to this same operation and rename it to Set-Printer-Subscription? Having a Set-Printer-Subscription
 579 operation would allow a client/server to set the "notify-events" to 'none' and thereby reserve a slot using the

580 lease time, but not have any Notifications until a subsequence Set-Printer-Subscription operation was done
581 that set some events.

582 Note: There is no need to renew a Per-Job Subscription, since it is effectively the time that the Job has
583 documents.

584 **8.5 Cancel-Printer-Subscription operation**

585 The Cancel-Printer-Subscription operation allows a client to remove a Per-Printer Subscription object from
586 the Printer. No more Notifications are delivered for that Subscription. Once performed, there is no way to
587 use that Subscription in the future. Subscription-ids should not be reused immediately, so that a stale
588 reference situation is not created. Same as for Cancel-Job and job-ids.

589 Request :

Group 1: Operation Attributes		Printer support
	"attributes-charset"	R
	"attributes-natural-language"	R
	"printer-uri" (uri)	R
	["requesting-user-name" (name(MAX))]	RECOMMENDED
	"subscription-id" (integer(1:MAX))	R

590 Response :

Group 1: Operation Attributes		Printer support
	"status-code" (type2 enum)	R
	"attributes-charset"	R
	"attributes-natural-language"	R
	["status-message" (text(255))]	O
	["detailed-status-message" (text(MAX))]	O
Group 2: Unsupported Attributes		R

604 **10 Change History**

605 The following changes have been made to this Notification Model document, in reverse chronological
606 order:

607 **10.1 Changes made from 99/08/07 version to make the 99/08/11 version**

608 The following changes were made from the 99/08/07 version to make the 99/08/11 version as result of the
609 IPP telecon, 9908/11:

- 610 1. Changed the name of the Replace-Job-Subscription operation to Set-Job-Subscription, since it can add,
611 remove or change Job notification attributes, not just replace them.
- 612 2. Added the configuration pictures.
- 613 3. Reduced the size of "notify-user-data" from 255 octets to 63 octets, since it is also send in the
614 Notification content which has a limit of 480 or so octets on some transports.
- 615 4. Changed the conformance requirements for the "notify-exclude-event-masks (1setOf octetString(8))"
616 operation attributes in Job creation and Create-Printer-Subscription operations from OPTIONAL to
617 REQUIRED, since their implementation means that clients can count on it. Also the minimum number
618 of Per-Printer Subscriptions can be less, since a client won't be forced to use multiple subscriptions
619 when recipients have different events. Finally, SNMPv3 has the exclude mask mechanism.
- 620 5. Added the OPTIONAL "notify-natural-languages" (1setOf naturalLanguage) Job Description attribute
621 so that each Notification Recipient could get a requested natural language, instead of the one in the Job
622 creation request.
- 623 6. Deleted the "job-trigger-message" Job Description attribute from Job object attribute. The client can
624 localize the remaining Job attributes on its slow scan in case Notifications are dropped.
- 625 7. Added the "notify-request-ids (1setOf integer(0:MAX))" Job Description attribute to the Job object to
626 indicate (and remember) the most recent request-id delivered for each Notification Recipient.
- 627 8. Deleted "previous-job-state (type1 enum)" and "job-state-reasons-added (1setOf type2 keyword)" and
628 "job-state-reasons-deleted (1setOf type2 keyword)" from the Job object. The "job-state-reasons" value
629 has enough information about why the Job is in the current state, so that we don't need the previous
630 state and state reasons for the slow scan polling Notification Recipient that is attempting to overcome
631 possible dropped Notifications.
- 632 9. Added REQUIRED "max-recipients-supported (integer(0:MAX))" Printer Description attribute to the
633 Printer object to indicate the max number of Per-Job and Per-Printer Notification Recipients supported
634 in each subscription. REQUIRE a minimum of 3 recipients.
- 635 10. Added the requirement that at least 8 Per-Printer Subscription object instances MUST be supported, if
636 Per-Printer subscriptions are supported. With the exclude mask, such a low number as 8 isn't too
637 restrictive on clients and isn't too expensive for low end devices.

- 638 11. Added the OPTIONAL "persistent-subscriptions-supported" (boolean) Printer Description attribute to
639 the Printer object to indicate whether or not the Printer supports persistent Per-Printer Subscriptions.
- 640 12. Changed the Printer support requirements for the "notify-exclude-event-mask" (1setOf octetString(8))
641 from OPTIONAL to REQUIRED, so that clients can count on it and to reduce the number of
642 Subscription objects that a Printer MUST support.
- 643 13. Added the OPTIONAL "notify-natural-languages" (1setOf naturalLanguage) Subscription object
644 attribute so that each Notification Recipient could get a requested natural language, instead of the one in
645 the Create-Printer-Subscription request.
- 646 14. Added the "subscription-id" attribute to the Subscription object so that each object instance is identified
647 in a manner analogous to Job objects.
- 648 15. Changed the name of "most-recent-request-id" to "notify-request-ids" for consistency in naming and to
649 be the same as the corresponding Job Description attribute ("notify-request-ids").
- 650 16. Changed the name of the "notify-lease-time-remaining" Subscription object attribute to "notify-lease-
651 time". Changed the semantics from the lease time interval requested to the "printer-up-time" (time
652 ticks) that the lease expires. The client can subtract the "printer-up-time" from the "notify-lease-time"
653 to find out how much time is left on the lease. This change makes the attribute value be a constant,
654 instead of having to be recomputed on each Get-Printer-Subscription-Attribute request.
- 655 17. Changed the name of the "notify-lease-time (integer(0:MAX))" Subscription object attribute to "notify-
656 lease-time-granted (integer(0:MAX))" and indicated that it is set by the Printer not the client.
- 657 18. Added 'printer-announce' event, so that the Subscriber can have the Notification Recipient be warned
658 that other Printer events are forth coming.
- 659 19. Added 'printer-queue-changed' - so that an application that is monitoring the queue can re-fetch the
660 queue with Get-Jobs.
- 661 20. Added "attributes-charset" and "attributes-natural-language" to the Job and Printer Notification content,
662 since the content is an 'application/ipp' MIME type for an IPP response.
- 663 21. Added "printer-name (name(127))" and "job-name (name(MAX))" to Job and Printer Notification
664 Content. These are helpful to end users to identify from whence came a notification.
- 665 22. Deleted the "job-trigger-message (text(255))" from the Job Notification content since the data is already
666 available in other attributes that the recipient should localize to present to a human. Also the Human
667 Consumable form will have many of the attributes when it is used.
- 668 23. Deleted "previous-job-state (type1 enum)" and "job-state-reasons-added (1setOf type2 keyword)" and
669 "job-state-reasons-deleted (1setOf type2 keyword)" from the Job Notification content. The current
670 "job-state-reasons" value has enough information about why the Job is in the current state, so that we
671 don't need the previous state and state reasons.

- 672 24. Deleted the "printer-trigger-message (text(255))" from the Printer Notification content, since the data is
673 already available in other attributes that the recipient should localize to present to a human. Also the
674 Human Consumable form will have many of the attributes when it is used.
- 675 25. Added [job-id (integer(1:MAX))] and [job-name (name(MAX))] to the Printer Notification content for
676 when the event is from a Per-Job subscription.
- 677 26. Deleted "previous-printer-state (type1 enum)" and "printer-state-reasons-added (1setOf type2
678 keyword)" and "printer-state-reasons-deleted (1setOf type2 keyword)" from the Printer Notification
679 content. The current "printer-state-reasons" value has enough information about why the Printer is in
680 the current state, so that we don't need the previous state and state reasons.
- 681 27. Added "printer-is-accepting-jobs (boolean)" attribute to the Printer Notification content, since it is a
682 state variable and its change causes the 'printer-state-change' event.
- 683 28. Added the definition of the Set-Job-Subscription operation.
- 684 29. Changed the name of "notify-lease-time" operation attribute in the Create-Printer-Subscription
685 operation to "notify-lease-time-requested" to distinguish it from the "notify-lease-time" (uptime ticks)
686 and "notify-lease-time-granted" returned in the response.
- 687 30. Added the "notify-persistence (boolean)" operation attribute to the Create-Printer-Subscriptions to
688 indicate whether the notification content delivery is to make the Per-Printer Subscription be permanent.
