PWG WIMS
Conference Call Minutes (Corrected)
November 23, 2009

1 Attendees
Lee Farrell  Canon
Rick Landau  Dell
Ira McDonald  High North (Samsung)
Peter Zehler  Xerox
Bill Wagner  TIC

2 General
➢ Meeting was convened at 2:00 PM EDT on 23 November, 2009.
➢ Bill Wagner agreed to take minutes
➢ Notice was made that the meeting was held in accord with the PWG Intellectual Property Policy
➢ The November 2 minutes ([ftp://ftp.pwg.org/pub/pwg/wims/minutes/cim-wims_091102.pdf]). were accepted without objection.

3 Action Items Review
➢ Change requests for corrections to CIM Print Classes.
  o No progress has been made on this item
  o Rick observed that acceptance of changes for CIM 2.24 were almost closed. Any Printer-related changes would come under no version earlier than 2.25
  o The DMTF is requiring use of a new interactive change tool for changes to 2.25 and later. Although it might make creation of CRs easier, Ira notes that it was one more tool to learn
  o Rick will take on learning the tool and creating the change requests. Ira needs to create the updated MOFs.
➢ Progress on CIM Print Service Classes change requests
  o No progress has been made on this item.
  o The observations above relative to the use of a new change request tool apply also to Print Service change requests.
➢ Device ID "COMMAND SET" PWG spec draft.
  o No progress has been made on this item.
  o Ira indicated that he will attempt to get an updated draft out before the December Face-to-face.

4 Power Management Spec draft
➢ The changes noted in the [ftp://ftp.pwg.org/pub/pwg/wims/wd/wd-wimspower10-20091112-rev.pdf] redline draft were reviewed. All changes were accepted, with the follow additional observations:
  o Para 4.2.4. Standby should refer to transition to On State, not On Mode
  o Para 3.2. Issue note relative to more use cases is removed, since these do not appear to be forthcoming
  o Para 3.3. Issue note is removed since the issue is resolved in this draft
  o Section 9. Need to add statement that Standby, Suspend and Hibernate states needed to be added to Other in IANA prtAlertCode definitions
➢ Next Steps
  o Ira will have updated draft in time for the December face-to-face meeting
5 Imaging Power MIB

➢ The ftp://ftp.pwg.org/pub/pwg/wims/wd/wd-wimspowermib10-20091112.mib version was reviewed.
  o The only clarification was relative to the powMonitorIndex, which was created to flatten the multi-dimensionality of the monitored components (type of component, instance of component, hrDevice). Each powMonitorIndex references the system (representing the overall device) or a specific monitored subunit, with the entries in the PowMonitor table giving the component type and ID.
  o The powMonitorIndex the appears as a index though the rest of the MIB tables, uniquely identifying the particular component be addressed
  o Ira agreed to make the description more clear

➢ Next Steps
  o Ira indicated that he had checked the MIB against various compilers, but asked that anyone with a MIB compiler also check the MIB to make sure that there is no incompatibility with as many compliers as is possible
  o Ira will have updated draft in time for the December face-to-face meeting

6 Next Teleconference

➢ November 30, 2:00 PM Eastern Time.
  o Bill indicated that he would have drafts of the December Face to Face slides available this week
  o The next concall is devoted to a discussion of these slides.

Bill Wagner, 24 November, 2009
