

# PWG IPP Printer State Extensions Working Group Meeting Lexington Face-to-Face Minutes October 27, 2006

Craig Whittle - PWG IPP-PSX Co-chair

## Attendees

Bill Wagner	TIC
Ira McDonald	High North
Rick Landau	Dell
Pete Zehler	Xerox
Harry Lewis	IBM
Lee Farrell	Canon
Ron Bergman	Ricoh
Jerry Thasher	Lexmark
MPI Tech	Ole Skov
Mike Fenerlan	Microsoft
Chris Story	Ricoh
Glen Petrie	Epson
Joseph Spillner	KDE

## General Discussion

- Ira went over the proposed specification (see <ftp://ftp.pwg.org/pub/pwg/ipp/wd/wd-ippstate10-20061011.pdf>). The comments follow:
  - Remove “subunit-turned-on” and “subunit-turned-off” below power-up and power-down in Section 5.1.3
  - Fix the numbering of the enum values x 1,000 (to avoid collision with other objects and allow for expansion)
  - Add “staple almost empty”. Also consider other “almost empty” values.
- Group was reminded that the target is operational status not management.

- Craig pointed out that the process with IPP-SPX (responding to a real requirement from BMLinkS, followed by making small changes to the existing specification allowing for additional capabilities, working toward a reference implementation) worked well.
- Ira indicated that Paul Danbold (Apple) has talked with Michael Sweet about putting IPP-PSX in CUPS.
- Best practice: specification should provide a rationale for work “not done” for future reference.

### **Next Steps / Open Actions:**

- The specification will be revised next week (incorporating the changes above) by Ira.
- No discussion was held on the next teleconference.
