

Internet Printing Protocol Workgroup Meeting Minutes August 17, 2017

Meeting was called to order at approximately 3:00pm ET on August 17, 2017.

Attendees

Smith Kennedy (HP)
Ira McDonald (High North)
Bill Wagner (TIC)
Rick Yardumian (Canon)

Agenda Items

1. IP Policy and Minute Taker
 - IP policy accepted, Smith taking minutes
2. Previous Minutes
 - <http://ftp.pwg.org/pub/pwg/ipp/minutes/ippv2-concall-minutes-20170803.pdf>
 - Approved as posted
 - <http://ftp.pwg.org/pub/pwg/ipp/minutes/ippv2-f2f-minutes-20170809.pdf>
 - Approved? Not 100% --> Bill was concerned about the IEEE organization information and its correctness
 - Action: Ira, Mike, and Paul to check and fix the IEEE organizations listed in the August F2F minutes
3. Side discussion about IPP Presets - should storing a Preset be done via Set-Printer-Attributes or should it be a resource or both? Will be discussed later in the meeting
 - Q: Should storing a Preset be done via Set-Printer-Attributes or should it be a resource or both?
 - Ira thinks it should be treated as a resource and the attributes should be 1setOf integer where the integer is a resource ID
 - The minutes from August F2F made it sound like both were legitimate
4. Approval of PJT3D process
 - Smith to send email to sc@pwg.org requesting approval of formal vote process
5. Approval of JDFMAP process
 - Will approve at SC meeting
6. "job-password" and "job-save-disposition" issue
 - Smith posted to August 9
 - Discussion of use case and requirements
 - Both "job-password" and "document-password" are inappropriate and don't do what we want
 - Maybe Smith's pending "document encryption" doc should be "job encryption" and pursue solving the problem that way...

- Smith to rewrite the use case using words that don't collide with PWG terminology (document, job, etc.) and make it more user-centric and stay away from solutions
7. Presets and resources
- Smith suggested that Ira write up his notions on making Presets and Triggers first class resource objects and post to the reflector
 - Treating Presets as resources would allow much better ACL control
 - Set-Printer-Attributes is an administrator operation, not an end user operation, and so that really isn't the right way to do this

Next Steps / Open Actions

- Next IPP WG conference calls on Thursday, August 31 and September 14, 2017 from 3:00-4:30pm ET
 - Smith won't be able to attend the September 14 meeting (or SC on that day either)
- Review white paper template
- Action: Ira, Mike, and Paul to check and fix the IEEE organizations listed in the August F2F minutes
- Action: Mike/Ira to request IESG change of status for RFC 8010/8011 to Internet Standard (PENDING)
- Action: Mike to send summary of IPP registration document process to SC (PENDING)
- Action: Paul to forward the AWS liaison process to the SC (PENDING)
- Action: Paul to send copy of ISO working document to SC list (DONE)
- Action: Mike to update document templates to use "this document" instead of "this spec" or "this standard" (PENDING)
- Action: Mike to review document template boilerplate and recommend changes and simplifications (PENDING)
- Action: Smith to write up job-password/job-save-disposition/resubmit use cases/requirements (PENDING)
- Action: Mike to document ippserver setup on Raspberry Pi for 3D (IN PROGRESS)
- Action: Mike to look at document template to fix level 3 headings which are not bold (ONGOING - template is correct, Mike will look at the System Service document instead)
