# The Printer Working Group (PWG) Proposed Standard for The Internet Printing Protocol (IPP): Document eObject

648 ISSUES are highlighted like this.  
~~ISSUE 01: Need to add all new attributes to CIP4/PODi/FSG IPP mapping document. When?~~

Draft 0.4 for 5100.5-2002

Version 0.5, October 25<sup>th</sup>, 2002

# The Printer Working Group (PWG) Proposed Standard for The Internet Printing Protocol (IPP): Document Object

**Version 0.5, October 25, 2002**

**Abstract:** This IPP specification extends the IPP Model and Semantics [RFC2911] object model by defining a Document object. The [RFC2911] Job object is extended to contain one or more Document objects which are passive objects operated on by the Job. The Document object is created by the [RFC2911] Send-Document and Send-URI operations and represents an Input Document to the Job. This specification also adds a Document Attributes group (and tag) to these Send-Document and Send-URI requests. The Document Attributes group contains any Document Template attributes to be applied to this Document object being created, overriding any corresponding Job Template attribute supplied at the job level (including the "document-overrides" operation attributes at the Job or Document level). A new Create-Document operation allows a client to supply the Document Attributes without the data (like Create-Job does for a Job object). Then the client sends the data content to that Document object using the new Send-Data operation. The client can also supply Document Attributes with the existing Send-Document and Send-URI operations to create Document objects with content data or a document reference, respectively.

This specification also defines seven new operations for Document objects once they have been created: Cancel-Current-Document, Cancel-Document, Get-Document-Attributes, Get-Documents, Delete-Document, Set-Document-Attributes, and Validate-Document.

This specification also lists all of the attributes defined in other IPP specifications to show their relationship to corresponding attributes defined in this IPP specification for use with the Document object. The full semantics of the "document-state", "document-state-reasons", and "document-state-message" Document Description attributes are given along side of the corresponding [RFC2911] "job-state", "job-state-reasons", and "job-state-message" Job Description attributes.

The purpose for specifying the Document object is so that the print industry can have a common semantic specification for use in IPP, the PWG Semantic Model, the PWG Print Service Interface (PSI) project, and the Free Standards Group Job Ticket API which all have a Document object.

This [version of the PWG Proposed Standard document](#) is available electronically at:

[ftp://ftp.pwg.org/pub/pwg/ipp/new\\_DOC/IPPpwg-ipp-document-object-v05-021025.pdf](ftp://ftp.pwg.org/pub/pwg/ipp/new_DOC/IPPpwg-ipp-document-object-v05-021025.pdf), .doc, .rtf

[This document is an IEEE-ISTO PWG Proposed standard. For a definition of a "PWG Proposed Standard" and its transition to a "PWG Draft Standard", see: <ftp://ftp.pwg.org/pub/pwg/general/pwg-process.pdf>. After approval by the PWG \(by a Last Call\) to transition this Proposed Standard to a Draft Standard, an IEEE-ISTO number will be assigned and this PWG Draft Standard will be available electronically at:](#)

92 ways to produce, test, measure, purchase, market, or provide other goods and services related to its scope.

93

### 93 **About the IEEE-ISTO**

94

95 The IEEE-ISTO is a not-for-profit corporation offering industry groups an innovative and flexible operational forum  
96 and support services. The IEEE-ISTO provides a forum not only to develop standards, but also to facilitate activities  
97 that support the implementation and acceptance of standards in the marketplace. The organization is affiliated with  
98 the IEEE (<http://www.ieee.org/>) and the IEEE Standards Association (<http://standards.ieee.org/>).

99

100 For additional information regarding the IEEE-ISTO and its industry programs visit <http://www.ieee-isto.org>.

101

102

### 103 **About the IEEE-ISTO PWG**

104 The Printer Working Group (or PWG) is a Program of the IEEE Industry Standards and Technology Organization  
105 (ISTO) with member organizations including printer manufacturers, print server developers, operating system  
106 providers, network operating systems providers, network connectivity vendors, and print management application  
107 developers. The group is chartered to make printers and the applications and operating systems supporting them  
108 work together better. All references to the PWG in this document implicitly mean "The Printer Working Group, a  
109 Program of the IEEE ISTO." In order to meet this objective, the PWG will document the results of their work as open  
110 standards that define print related protocols, interfaces, procedures and conventions. Printer manufacturers and  
111 vendors of printer related software will benefit from the interoperability provided by voluntary conformance to these  
112 standards.

113 In general, a PWG standard is a specification that is stable, well understood, and is technically competent, has  
114 multiple, independent and interoperable implementations with substantial operational experience, and enjoys  
115 significant public support.

116 For additional information regarding the Printer Working Group visit: <http://www.pwg.org>

117

255

## 256 1 Introduction and Summary

257 **Abstract**—This IPP specification extends the IPP Model and Semantics [RFC2911] object model by defining a  
258 Document object. The [RFC2911] Job object is extended to contain one or more Document objects which are  
259 passive objects operated on by the Job. The Document object is created by the [RFC2911] Send-Document and  
260 Send-URI operations and represents an Input Document to the Job. This specification also adds a Document  
261 Attributes group (and tag) to these Send-Document and Send-URI requests. The Document Attributes group  
262 contains any Document Template attributes to be applied to this Document object being created, overriding any  
263 corresponding Job Template attribute supplied at the job level (including the “document-overrides” operation  
264 attributes at the Job or Document level). A new Create-Document operation allows a client to supply the Document  
265 Attributes without the data (like Create-Job does for a Job object). Then the client can send the data content to that  
266 Document object using the new Send-Data operation.

267 This specification also defines seven new operations for Document objects once they have been created: Cancel-  
268 Current-Document, Cancel-Document, Get-Document-Attributes, Get-Documents, Delete-Document, Set-Document-  
269 Attributes, and Validate-Document.

270 This specification also lists all of the attributes defined in other IPP specifications to show their relationship to  
271 corresponding attributes defined in this IPP specification for use with the Document object. The full semantics of the  
272 “document-state”, “document-state-reasons”, and “document-state-message” Document Description attributes are  
273 given along side of the corresponding [RFC2911] “job-state”, “job-state-reasons”, and “job-state-message” Job  
274 Description attributes.

275 The intent is to propose this specification as an IPP extension and which will be referenced as part of the PWG  
276 Semantic Model. The purpose for specifying the Document object is so that the print industry can have a common  
277 semantic specification for use in IPP, the PWG Semantic Model [pwg-sm], the PWG Print Service Interface (PSI)  
278 project [pwg-psi], and the Free Standards Group Job Ticket API [fsg-jt] which all have a Document object.

### 279 1.1 Scope

280 Part of the extension is to allow the client to supply printing instructions, called Document Template attributes, when  
281 creating each Document object. An IPP Printer object implementation MAY support most of the existing Job  
282 Template attributes as Document Template attributes as well. (The PWG Semantic Model [pwg-sm] currently calls  
283 the Job Template attributes and Document Template attributes simply “Job Processing” and “Document Processing”  
284 attributes). Note: There are a number of footnotes which relate this IPP specification to the PWG Semantic model  
285 and other PWG projects, such as the Print Service Interface (PSI) [pwg-psi].

286 The Document object is a passive object<sup>1</sup> and is operated upon by the Job. The client uses the new Create-  
287 Document operation or either of the existing Send-Document and Send-URI operations to create a Document object.  
288 In addition there are 8 new operations that affect the Document object after it has been created as summarized in  
289 Table 1.

---

<sup>1</sup> The Document object is *not* a sub-job. If Job trees are desired where sub-jobs can be on different network nodes, such as in JDF, then a separate specification should be generated for Job trees.

290

Table 1 - List of Document operations

Operation Name	Printer support	Brief Description
Create-Document <sup>2</sup>	REQUIRED	Creates a Document object with Document attributes, but no data.
Send-Data	REQUIRED	Sends data to the Document object created by Create-Document.
Send-Document *	REQUIRED	Creates a Document object with Document attributes and data.
Send-URI *	OPTIONAL	Creates a Document object with Document attributes and a URL reference to the data (print-by-reference).
Validate-Document	REQUIRED	Validate that the supplied Document attributes are supported.
Get-Document-Attributes	REQUIRED	Get requested attributes of specified Document in the specified Job.
Get-Documents	REQUIRED	Get requested attributes of all of the Documents in the specified Job.
Set-Document-Attributes	OPTIONAL	Set the supplied Document attributes on the specified Document.
Cancel-Document	OPTIONAL REQUIRED	Cancel the specified Document in the specified Job, but don't remove it.
Cancel-Current-Document	OPTIONAL	Cancel the current document that the Printer is printing.
Delete-Document	OPTIONAL	Remove the specified Document object and its data from the Job.

291 \* The existing IPP/1.1 operations defined in [RFC2911] with an extension so the client can supply Document

292 Template attributes in a new attribute Group in the request.

293 This specification also specifies the life cycle of the Document object by defining the "document-state", "document-  
294 state-reasons", and "document-state-message" attributes. Finally, the analogous Document Descriptions attributes  
295 that correspond to the Job Description attributes are defined.

## 296 2 Terminology

297 This section defines terminology used throughout this document.

### 298 2.1 Conformance Terminology

299 Capitalized terms, such as **MUST**, **MUST NOT**, **REQUIRED**, **SHOULD**, **SHOULD NOT**, **MAY**, **NEED NOT**, and  
300 **OPTIONAL**, have special meaning relating to conformance as defined in RFC 2119 [RFC2119] and [RFC2911]  
301 section 12.1. If an implementation supports the extension defined in this document, then these terms apply;  
302 otherwise, they do not. These terms define conformance to *this document (and [RFC2911]) only*; they do not affect  
303 conformance to other documents, unless explicitly stated otherwise. To be more specific:

304 **REQUIRED** - an adjective used to indicate that a conforming IPP Printer implementation **MUST** support the indicated  
305 operation, object, attribute, attribute value, status code, or out-of-band value in requests and responses. See  
306 [RFC2911] "Appendix A - Terminology for a definition of "support". *Since support of this entire Document Object*  
307 *specification is OPTIONAL for conformance to IPP/1.1, the use of the term REQUIRED in this document means*  
308 *"REQUIRED if this OPTIONAL Document Object specification is implemented".*

309 **RECOMMENDED** - an adjective used to indicate that a conforming IPP Printer implementation is recommended to  
310 support the indicated operation, object, attribute, attribute value, status code, or out-of-band value in requests and  
311 responses. *Since support of this entire Document Object specification is OPTIONAL for conformance to IPP/1.1, the*  
312 *use of the term RECOMMENDED in this document means "RECOMMENDED if this OPTIONAL Document Object*  
313 *specification is implemented".*

<sup>2</sup> The Create-Document operation maps to the PWG PSI Send-Document-By-Post operation and the Send-Data maps to the HTTP Post operation.

314 **OPTIONAL** - an adjective used to indicate that a conforming IPP Printer implementation MAY, but is NOT  
315 REQUIRED to, support the indicated operation, object, attribute, attribute value, status code, or out-of-band value in  
316 requests and responses.

## 317 2.2 Other Terminology

318 This document uses the same terminology as [RFC2911], such as “**client**”, “**Printer**”, “**attribute**”, “**attribute value**”,  
319 “**keyword**”, “**Job Template attribute**”, “**Operation attribute**”, “**operation**”, “**request**”, “**response**”, and “**support**”  
320 with the same meaning. In addition, the following terms are defined for use in this document:

321 **Document object** - the object to represent the logical concept of a document in a Job. A **Job object** can contain  
322 one or more **Document objects**.

323 **Job Creation operation** - operations that create Job objects, specifically: Print-Job, Print-URI, and Create-Job as  
324 defined in [RFC2911].

325 **Document Creation operation** - operations that create Document objects. Specifically: Create-Document, Print-  
326 Job, Print-URI, Send-Document and Send-URI. Note: the Print-Job and Print-URI are both **Job Creation** and  
327 **Document Creation** operations, since they create both Job and a **Document object** at the same time. Also this  
328 specification does not extend the Print-Job and Print-URI operations. However, this specification does extend the  
329 Send-Document and Send-URI operations to allow the client to supply **Document Template** attributes in each  
330 request.

331 **Job Level** - attributes supplied in the Print-Job, Print-URI, and Create-Job are referred to as being supplied at the  
332 **Job Level**. Attributes supplied at the **Job Level** are a mixture of **Job attributes** and **Document attributes**. **Job**  
333 **attributes** apply to the Job as a whole, while **Document attributes** provide defaults for the **Document objects** in  
334 case the client does not supply a **Document attribute** at the **Document Level** for a **Document object**. Put another  
335 way, **Document objects** *inherit* **Document attributes** from the **Job object** which are used if the client didn't supply  
336 a corresponding attribute for the **Document object**.

337 **Document Level** - attribute supplied in the Send-Document, Send-URI, and Create-Document operations are  
338 referred to as being supplied at the **Document Level**. Note: attribute supplied in the Print-Job and Print-URI  
339 requests are considered as being supplied at the **Job Level** only, *not* also at the **Document Level**, even though  
340 Print-Job and Print-URI also create **Document objects**.

341 **Attribute Precedence** - the precedence rules which dictate which attribute value takes precedence when the same  
342 attribute is supplied at different points in the work flow with different values, such as at both the **Job Level** and the  
343 **Document Level**. See section 5.

344 **Job Attribute** - an **Operation attribute** or a **Job Template** attribute that applies to the Job (object) as a whole. For  
345 example, “job-name” is an **Operation attribute** and “job-priority” is a **Job Template attribute**.

346 **Document Template attribute** - an attribute that the client supplies in a Create-Document, Send-Document, or  
347 Send-URI operation request in the Document Attributes group. For example, “media”.

348 **Document attribute** - an **Operation attribute** or a **Document Template attribute** that applies to a **Document**  
349 **object** as a whole. For example, “document-format” is an Operation attribute and “media” is a Document Template  
350 attribute.

351 Table 2 shows this terminology as applied to the six operations. Note that Print-Job and Print-URI are both Job  
352 Creation operations and Document Creation operations, though they only create single Document jobs. In other  
353 words, for Print-Job and Print-URI, there is only one document per job, so whether the attributes are considered to be  
354 submitted at the Job Level and then inherited by the Document object, is moot, since these operations do not have a

355 separate Document group in which the client can supply Document attributes. Note also that for the “Level” concept,  
356 no operation supplies attributes at more than one level.<sup>3</sup>

357 **Table 2 - Job Creation and Document Creation operations**

Job Creation operation	Document Creation operation	Operation	Attribute Group in Request		Level
			Job	Document	
yes		<b>Create-Job</b>	Job attributes and Document attributes		Job Level
yes	yes	<b>Print-Job</b>	Job attributes and Document attributes		
yes	yes	<b>Print-URI</b>	Job attributes and Document attributes		
	yes	<b>Create-Document</b>		Document attributes	Document Level
	yes	<b>Send-Document</b>		Document attributes	
	yes	<b>Send-URI</b>		Document attributes	

358

359 **Document Overrides** - a way for a client to specify attributes to apply to specified documents in a multi-document  
360 job. Specifically, as member attributes of the “document-overrides” **Job Template attribute** in a **Job Creation**  
361 operation or the “document-overrides” **operation attribute** in a **Document Creation operation** as defined in  
362 [override]. Note: The **Document Template attributes** supplied in a Create-Document, Send-Document, or Send-  
363 URI operation also “override” any Document Template attributes supplied in the Job Creation operation.

### 364 **3 Document Operations**

365 The Document object semantics are as parallel to the Job object semantics as possible. Therefore, most of the Job  
366 operations have analogous Document operations as shown in Table 14 in section “Appendix A: Document operations  
367 compared to Job operations”. Operations that can apply only to an entire job, have no analogous document  
368 operation as indicated. This extension adds 8 new Document operations that operate on the Document object once  
369 it is created by the new Create-Document operation or either of the existing two operations: Send-Document and  
370 Send-URI operations.

371 Note: By Document object we mean the object once it become a contained part of a Job object, not before or after.  
372 So in this specification a Document object does not represent data in a repository.

373 The signatures of the operation requests that create and/or validate Document objects are very similar as shown in  
374 Table 3 and defined in section 3.1 through section 3.5. The entries in the table show what a client MUST, MAY, or  
375 MUST NOT supply in the indicated operation requests.

<sup>3</sup> The PWG Semantic Model [pwg-sm] calls the Operation attributes supplied by the client: Job Description attributes or Document Description attributes for the Job Creation and Document Creation operations, respectively. The [pwg-sm] also calls Job Template attributes and Document Template attributes: Job Processing and Document Processing attributes, respectively. Each Processing attribute is defined to be a Job Processing or a Document Processing attribute, but is not both. The client can supply both Job Processing and Document Processing attributes in a Job Creation operation, in which case the Document Processing attributes server as defaults for the Document objects. The Printer copies all of these client’s supplied attributes to the Job or Document object. Read-only Job and Document attributes that the system sets are called Job State and Document State attributes (instead of Description attributes).

376

**Table 3 - Client-supplied Document Creation and Validation Request Signatures**

	<u>Create-Document</u>	<u>Send-Data</u>	<u>Send-Document</u>	<u>Send-URI</u>	<u>Validate-Document</u>
<u>Target job</u>	<u>MUST</u>	<u>MUST</u>	<u>MUST</u>	<u>MUST</u>	<u>MAY</u>
<u>"input-document-number"</u>	<u>MAY</u>	<u>MUST</u>	<u>MAY</u>	<u>MAY</u>	<u>MAY</u>
<u>"document-uri"</u>	<u>MUST NOT</u>	<u>MUST NOT</u>	<u>MUST NOT</u>	<u>MUST</u>	<u>MAY</u>
<u>Document Template attributes</u>	<u>MAY</u>	<u>MUST NOT</u>	<u>MAY</u>	<u>MAY</u>	<u>MAY</u>
<u>Data</u>	<u>MUST NOT</u>	<u>MUST</u>	<u>MUST</u>	<u>MUST NOT</u>	<u>MUST NOT</u>

377

378 The entries in Table 4 show what a Printer MUST, MAY, or MUST not support and return in the indicated operations  
 379 responses.

380

**Table 4 - Printer-returned Document Creation and Validation Response Signatures**

	<u>Create-Document</u>	<u>Send-Data</u>	<u>Send-Document</u>	<u>Send-URI</u>	<u>Validate-Document</u>
<u>Status code/message</u>	<u>MUST</u>	<u>MUST</u>	<u>MUST</u>	<u>MUST</u>	<u>MUST</u>

<u>"document-state-message"</u>	<u>MAY</u>	<u>MAY</u>	<u>MAY</u>	<u>MAY</u>	<u>MUST NOT</u>

381

382 **3.1 Create-Document Operation**

383 This REQUIRED operation allows a client to create a Document object, supply Document attributes, and have the  
 384 Printer validate those attributes without sending any document content data. If the Printer rejects the request, the  
 385 client won't have sent the possibly time-consuming data. The client MUST perform the operations in the following  
 386 order: (1) Create-Job to create the Job object, (2) Create-Document to create the Document object, (3) Send-Data  
 387 (see section 3.2) to send the content data for the Document object.

388 The client can supply multiple documents for a single Job using pairs of Create-Document and Send-Data  
 389 operations. The order of the corresponding Send-Data operations is not important, so that the client can send pairs  
 390 of Create-Document and Send-Data operations or can send a number of Create-Document operations followed by  
 391 the corresponding Send-Data operations. The latter approach is useful if the client wants to make sure that all  
 392 Documents will be accepted by the Printer before sending any of the Document data to the Printer.

393 If a Printer supports the Document object, the Printer:

- 394 1. MUST also support the Create-Document and Send-Data operations
- 395 2. MUST support the "multiple-operation-time-out" Printer Description attribute (see [RFC2911] section 4.4.31).

- 396 3. MUST support the "multiple-document-jobs-supported" Printer Description attribute (see [RFC2911] section  
397 4.4.16) with a 'true' value, that is the Printer MUST support multiple document jobs.
- 398 4. MUST support the "multiple-document-handling" Job Template job attribute with at least one value (see  
399 [RFC2911] section 4.2.4) and the associated "multiple-document-handling-default" and "multiple-document-  
400 handling-supported" Job Template Printer attributes (see [RFC2911] section 4.2). ~~ISSUE 02: Do we want  
401 to say which values of "multiple-document-handling" a Printer MUST support? The defined values are:  
402 'single-document', 'single-document-new-sheet', 'separate-documents-uncollated-copies', and 'separate-  
403 documents-collated-copies'.~~
- 404 5. MUST support the Attribute Precedence semantics specified in section 5 for the levels that the Printer  
405 supports.

406 The Printer sets the value of the Document's "document-state" Document Description attribute to 'pending', if the  
407 Printer accepts the Create-Document request. A Printer MAY set the 'job-data-insufficient' value of the Document's  
408 "document-state-reason" Document Description attribute to indicate that processing cannot begin until sufficient data  
409 has arrived and set the "document-state" to 'pending'. A non-spooling printer that doesn't implement the 'pending'  
410 document state may even set the "document-state" to 'processing', even though there is not yet any data to process.  
411 See sections 8.5 and 8.7.

412 *Access Rights:* The authenticated user (see [RFC2911] section 8.3) performing this operation must either be the job  
413 owner (as determined in the Create-Job operation) or an operator or administrator of the Printer object (see  
414 [RFC2911] sections 1 and 8.5). Otherwise, the Printer MUST reject the operation and return: 'client-error-forbidden',  
415 'client-error-not-authenticated', or 'client-error-not-authorized' as appropriate.

### 416 3.1.1 Create-Document Request

417 The client supplies the following groups as part of the Create-Document Request:

#### 418 Group 1: Operation Attributes

##### 419 Natural Language and Character Set:

420 First, the client MUST supply the "attributes-charset" and "attributes-natural-language" Operation attributes  
421 as described in [RFC2911] section 3.1.4.1. The Printer object MUST copy these values to the corresponding  
422 Job Description attributes described in [RFC2911] sections 4.3.19 and 4.3.20.

##### 423 Target:

424 Next, the client MUST supply either (1) the "printer-uri" (uri) plus "job-id" (integer(1:MAX)) or (2) the "job-uri"  
425 (uri) operation attribute(s) which define the target Job object for this operation as described in [RFC2911]  
426 section 3.1.5. The client MAY supply the remaining Operation attributes in any order following:

##### 427 Requesting User Name:

428 The "requesting-user-name" (name(MAX)) attribute SHOULD be supplied by the client as described in  
429 [RFC2911] section 8.3.

#### 430 3.1.1.1 input-document-number ~~"document-number"~~(integer(1:MAX)) \_\_\_\_\_ operation attribute:

431 The client MAY supply the "input-document-number" Operation attribute to indicate which Document object  
432 in the Job to which this Create-Document request is to apply. If the Printer supports this attribute, the Printer  
433 MUST also support the corresponding "document-number" (text(127)) Document Description attribute (see  
434 section 8.1) and copy this value to the "document-number" Document Description attribute. Usually the  
435 client omits this Operation attribute, so that the Printer assigns the next integer value starting at 1 for each  
436 Job. A client that is creating multiple Document objects in parallel MAY wish to supply this attribute in order  
437 to control the order of the Documents in the job. If supplied, the Printer MUST copyies the value to the

438 Document object's "document-number" Document Description attribute. If the Job already contains a  
 439 Document with the same "document-number" value as the one supplied by this attribute, the Printer MUST  
 440 reject the request and return the 'client-error-client-error-conflicting-attributes (see [RFC2911] section  
 441 13.1.4.15) and the "input-document-number" and "document-number" attributes.

### 442 **3.1.1.2 last-document (boolean):** operation attribute

443 The client MUST supply this attribute (as in the Send-Document and Send-URI operation requests). The  
 444 Printer object MUST support this attribute. This attribute is a boolean flag that the client supplies with a 'true'  
 445 value if this is the last document for the Job, 'false' otherwise.

### 446 **3.1.1.3 document-message (text(127))** operation attribute

447 The client MAY supply this operation attribute. If the Printer supports this attribute, the Printer MUST also  
 448 support the corresponding "document-message" (text(127)) Document Description attribute (see section  
 449 8.10) and copy this value to the "document-message" Document Description attribute. The end user can use  
 450 this Document Description attribute as a message to the operator and the operator can use it as a message  
 451 to the user. The Printer MAY print this message on a document start sheet for this document, if any.

### 452 **Additional Operation attributes in any order:**

453 Any of the other Operation attributes indicated in the "Level Supplied" column labeled with a "y" in the "Doc"  
 454 column in Table 6, such as "document-name" and "document-format". These operation attributes are said to  
 455 be supplied at the Document Level and apply to the Document object, overriding any operation attributes  
 456 supplied at the Job Level. For example, if "document-format" = 'application/postscript' at the Job Level and  
 457 "document-format" = 'text/plain' in this Create-Document request, this Document will be 'text/plain'. If the  
 458 next Create-Document request for this Job omits the "document-format" operation attribute, that Document  
 459 will be 'application/postscript'.

## 460 **Group 2: Document Template Attributes**

### 461 **Any Document Template attributes in any order:**

462 The client OPTIONALLY supplies a set of Document Template attributes, that is any attributes indicated in  
 463 Table 8 in the "Defined for use" column labeled with a "y" in the "D" column. These Document Template  
 464 attributes are said to be supplied at the Document Level and apply to the Document object, overriding any  
 465 Document Template attributes supplied at the Job Level. For example, if "media" = 'na-letter-white' at the  
 466 Job Level and "media" = 'na-letter-transparency' in this Create-Document request, this Document will be 'na-  
 467 letter-transparency'. If the next Create-Document operation for this Job omits the "media" operation attribute,  
 468 that Document will be 'na-letter-white' which it inherits from the Job.

469 If the client is not supplying any Document Template attributes in the request, the client SHOULD omit Group  
 470 2 rather than sending an empty group. However, a Printer object MUST be able to accept an empty group.

471 The client MUST NOT supply the document data in this operation request. See Send-Data operation.

### 472 **Group 3: Subscription Attributes (see [ntfy] section 11.1.3.1): MUST NOT be present. Notification is only at** 473 **the Job Level.**

474 In addition to the MANDATORY parameters required for every operation request (see [RFC2911]), the simplest  
 475 Create-Document request consists of just the "attributes-charset" and "attributes-natural-language" operation  
 476 attributes; either (1) the "printer-uri" target operation attribute and the "job-id" or (2) the "job-uri" and nothing else. In  
 477 this simple case, the Printer object:

478 - creates a new Document object and adds it to the specified Job object,

- 479 | - assigns the lowest document number not yet used by this Job, if the client did not supply an "input-document-  
480 | number" operation attribute (see section 3.1.1.1). Copy the document number assigned or supplied to the  
481 | Document object's "document-number" Document Description attribute.
- 482 | - stores a generated Document name in the "document-name" Document Description attribute in the natural  
483 | language and charset requested (see [RFC2911] section 3.1.4.1) (if those are supported, otherwise using  
484 | the Printer object's default natural language and charset), and
- 485 | - at job processing time, uses its corresponding default value attributes for the supported Document Template  
486 | attributes that were (1) not supplied by the client as IPP attributes and (2) not embedded instructions in the  
487 | document data.

### 488 3.1.2 Create-Document Response

489 The Printer object MUST return the following sets of attributes to the client as part of the Create-Job response:

#### 490 Group 1: Operation Attributes

##### 491 Status Message:

492 In addition to the REQUIRED status code returned in every response, the response OPTIONALLY includes a  
493 "status-message" (text(255)) and/or a "detailed-status-message" (text(MAX)) operation attribute as described  
494 in [RFC2911] sections 13 and 3.1.6. ~~If the client supplies unsupported or conflicting Job Template attributes~~  
495 ~~or values, the Printer object MUST reject or accept the Print-Job request depending on~~

##### 496 The Printer MUST reject the operation:

497 If the client supplies the "ipp-attribute-fidelity" operation attribute (see section 6.2.1) with a 'true'  
498 value and the client supplies any unsupported and/or conflicting Job Template or Document  
499 Template attributes.

500 If the client omits or supplies the "ipp-attribute-fidelity" operation attribute (section 6.2.3) with a 'false'  
501 value and supplies keyword values of the "document-mandatory-attributes" operation attribute that  
502 are unsupported and/or conflicting.

503 Otherwise, the Printer MUST accept the operation and ignore or substitute unsupported and/or conflicting  
504 attribute values supplied by the client. ~~the whether the client supplied a 'true' or 'false' value for the "ipp-~~  
505 ~~attribute-fidelity" operation attribute or the name of one of the attributes with unsupported values in the "job-~~  
506 ~~mandatory-attributes" operation attribute.~~ See the Implementer's Guide [RFC3196] for a complete  
507 description of the suggested steps for processing the attributes in a create request.

##### 508 Natural Language and Character Set:

509 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section  
510 3.1.4.2.

#### 511 Group 2: Unsupported Attributes

512 See [RFC2911] section 3.1.7 for details on returning Unsupported Attributes.

513 | The value of the "ipp-attribute-fidelity" and "job document-mandatory-attributes" operation attributes supplied  
514 | by the client does not affect what attributes the Printer object returns in this group. The value of these two  
515 | operation attributes only affects whether the Create-Job operation is accepted or rejected. If the Document  
516 | is accepted, the client may query the Document object using the Get-Document-Attributes operation (see  
517 | section 3.5) requesting the unsupported attributes that were returned in the create response to see which

518 attributes were ignored (not stored on the Document object) and which attributes were stored with other  
 519 (substituted) values.

520 **Group 3: Job Object Attributes**

521 In addition, the Printer MUST return the same Job status attributes that [RFC2911] REQUIRES for the Send-  
 522 Document and Send-URI operation responses (which are the same as for the Print-Job response -  
 523 [RFC2911] section 3.2.1.2):

- 524 "job-uri" (uri) - see [RFC2911] section 4.3.1
- 525 "job-id" (integer(1:MAX)) - see [RFC2911] section 4.3.2
- 526 "job-state" (type1 enum) - see [RFC2911] section 4.3.7
- 527 "job-state-reasons" (1setOf type2 keyword) - see [RFC2911] section 4.3.8

528 The Printer MAY return:

- 530 "job-state-message" (text(MAX)) - see [RFC2911] section 4.3.9
- 531 "number-of-intervening-jobs" (integer(0:MAX)) - see [RFC2911] section 4.3.15

532 **Group 43: Document Object Attributes**

533 The Printer returns the following Document Description Attributes and Job Description Attributes:

534 **3.1.2.1 document-number (integer(1:MAX)) Document Description attribute**

535 The Printer MUST return the document number of this Document object that was either assigned by the  
 536 Printer (see section 3.1.1) or supplied by the client (see section 3.1.1.1).  
 537

538 **3.1.2.2 document-id-uri (uri) Document Description attribute**

539 The Printer MUST return the document id of this Document object as a URI as assigned by the Printer (see  
 540 section 8.2).

541 **3.1.2.3 document-state (type1 enum) Document Description attribute**

542 The Printer MUST return the state of this Document object (see section 8.5).

543 **3.1.2.4 document-state-reasons (1setOf type2 keyword) Document Description attribute**

544 The Printer MUST return the associated state reasons for this Document (see section 8.7).

545 **3.1.2.5 document-state-message (text(MAX)) Document Description attribute**

546 The Printer MAY return the localized description of the "document-state" and "document-state-reasons"  
 547 values for this Document (see section 8.9).

548 In addition, the Printer MUST return the same attributes that [RFC2911] REQUIRES for the Send Document and  
 549 Send-URI operations (which is the same as for the Print Job response): "job-uri" (uri), "job-id" (integer(1:MAX)),  
 550 "job-state" (type1 enum), "job-state-reasons" (1setOf type2 keyword). The Printer MAY return: "job-state-  
 551 message" (text(MAX)) and/or "number-of-intervening-jobs" (integer(0:MAX)).

## 552 3.2 Send-Data Operation

553 This REQUIRED operation allows the client to create a Document object using the Create-Document operation (see  
554 section 3.1) that the Printer validates before the client sends any document content data. Then the client can skip  
555 sending the data to the Printer, if the Printer rejects the Document Creation operation.

556 Since the Create-Document and the Send-Data operation that follows could occur over an arbitrarily long period of  
557 time for a particular Document, a client MUST send the Send-Data operation within an IPP Printer defined minimum  
558 time interval after the receipt of the previous request for the job. If a Printer object supports the Document object, the  
559 Printer object MUST support the "multiple-operation-time-out" attribute (see [RFC2911] section 4.4.31). This  
560 attribute indicates the minimum number of seconds the Printer object will wait for the next send operation before  
561 taking some recovery action. See the description under Send-Document in [RFC2911] section 3.3.1, for the possible  
562 Printer actions, if the client does not supply a Send-Data request in time.

563 *Access Rights:* The authenticated user (see [RFC2911] section 8.3) performing this operation must either be the job  
564 owner (as determined in the Create-Job operation) or an operator or administrator of the Printer object (see  
565 [RFC2911] sections 1 and 8.5). Otherwise, the Printer MUST reject the operation and return: 'client-error-forbidden',  
566 'client-error-not-authenticated', or 'client-error-not-authorized' as appropriate.

### 567 3.2.1 Send-Data request

568 The following attribute sets are part of the Send-Data Request:

#### 569 Group 1: Operation Attributes

##### 570 Natural Language and Character Set:

571 The "attributes-charset" and "attributes-natural-language" attributes as described in section [RFC2911]  
572 3.1.4.1.

##### 573 Target:

574 The "document-number" (integer(1:MAX)) operation attribute MUST be supplied along with immediately after  
575 either (1) the "printer-uri" (uri) plus "job-id" (integer(1:MAX)) or (2) the "job-uri" (uri) and "operation attribute(s)"  
576 which define the target Document object for this operation as described in section [RFC2911] 3.1.5. If the  
577 client omits the "document-number" operation attribute, the Printer MUST reject the request and return the  
578 'client-error-bad-request' status code.

##### 579 Requesting User Name:

580 The "requesting-user-name" (name(MAX)) attribute SHOULD be supplied by the client as described in  
581 [RFC2911] section 8.3.

#### 582 Group 2: Document Content

583 The client MUST supply the document data in-line to be processed for this Document, just like supplying  
584 data in the Send-Document and Print-Job requests.

### 585 3.2.2 Send-Data Response

586 The following sets of attributes are part of the Send-Data Response:

## 587 Group 1: Operation Attributes

### 588 Status Message:

589 In addition to the REQUIRED status code returned in every response, the response OPTIONALLY includes a  
590 "status-message" (text(255)) and/or a "detailed-status-message" (text(MAX)) operation attribute as described  
591 in [RFC2911] sections 13 and 3.1.6.

### 592 Natural Language and Character Set:

593 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section  
594 3.1.4.2.

## 595 Group 2: Unsupported Attributes

596 See [RFC2911] section 3.1.7 for details on returning Unsupported Attributes.

## 597 Group 3: Job Object Attributes

598 The Printer MUST return This is the same set of Job status attributes as for the Print-Job, Send-Document,  
599 and Create-Document responses (see section 3.1.2) ~~described in the Create-Job response (see [RFC2911]~~  
600 ~~section 3.2.1.2).~~

## 601 Group 4: Document Object Attributes

602 The Printer MUST return the same set of Document status attributes as for the Create-Document operation  
603 response (see section 3.1.2)

604 ISSUE 01: OK for the Send-Data operation to return Document status attributes (as well as Job status  
605 attributes) so at to be like the other Document operations?

## 606 3.3 Send-Document Operation

607 This REQUIRED<sup>4</sup> operation allows a client to submit multiple documents in a single Job by making a Send-Document  
608 request for each Document. In this specification, the Send-Document creates a Document object ([RFC2911] did not  
609 have a Document object). A Printer MUST support this operation with the semantics specified in [RFC2911] and with  
610 the extension defined in this specification, since this specification REQUIRES the Printer to support multiple  
611 document jobs.

612 See [RFC2911] section 3.3.1 for the semantics of the Send-Document operation not reproduced here.

613 *Access Rights:* The authenticated user (see [RFC2911] section 8.3) performing this operation must either be the job  
614 owner (as determined in the Create-Job operation) or an operator or administrator of the Printer object (see  
615 [RFC2911] sections 1 and 8.5). Otherwise, the Printer MUST reject the operation and return: 'client-error-forbidden',  
616 'client-error-not-authenticated', or 'client-error-not-authorized' as appropriate.

### 617 3.3.1 Send-Document Request

618 The following attribute sets are part of the Send-Document Request:

---

<sup>4</sup> The Send-Document operation is REQUIRED in this specification while it was OPTIONAL in [RFC2911]. This difference is because this specification REQUIRES Printer support of multiple document jobs, while [RFC2911] did not.

**619 Group 1: Operation Attributes (as in [RFC2911])**

620 As specified in [RFC2911] section 3.3.1 [Send-Document request](#), plus any extensions indicated in Table 6.  
621 For example, "compression", "document-format", and "document-name". [So this group is the same as for](#)  
622 [Create-Document \(see section 3.1.1\)](#).

**623 Group 2: Document Attributes (new - not in [RFC2911])**

624 The client OPTIONALLY supplies a set of Document Template attributes as listed in Table 8. For example,  
625 "media" and "number-up". If the client is not supplying any Document Template attributes in the request, the  
626 client SHOULD omit Group 2 rather than sending an empty group. However, a Printer object MUST be able  
627 to accept an empty group.

**628 Group 3: Document Content (as in [RFC2911] [Group 2](#))**

629 The client MUST supply the document data in-line to be processed for this Document if the "last-document"  
630 flag is set to 'false'. However, since a client might not know that the previous Document object created with a  
631 Create-Job, Send-Document, or Send-URI operation was the last document (i.e., the "last-document"  
632 attribute was set to 'false'), it is legal to send a Send-Document request with no document data where the  
633 "last-document" flag is set to 'true'. For this case, the Printer MUST NOT increment the value of the Job  
634 object's "number-of-documents" attribute, since no Document object was added to the job. In addition, it is  
635 not an error for a client to submit a job with no actual document data, i.e., only a single Create-Job and  
636 Send-Document request with a "last-document" operation attribute set to 'true' with no document data; it is  
637 only an empty job which is scheduled and processed normally.

**638 3.3.2 Send-Document Response**

639 The following sets of attributes are part of the Send-Document Response:

**640 Group 1: Operation Attributes (as in [RFC2911] [Group 1](#))****641 Status Message:**

642 In addition to the REQUIRED status code returned in every response, the response OPTIONALLY includes a  
643 "status-message" (text(255)) and/or a "detailed-status-message" (text(MAX)) operation attribute as described  
644 in [RFC2911] sections 13 and 3.1.6.

**645 Natural Language and Character Set:**

646 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section  
647 3.1.4.2.

**648 Group 2: Unsupported Attributes (as in [RFC2911] [Group 2](#))**

649 See [RFC2911] section 3.1.7 for details on returning Unsupported Attributes.

**650 Group 3: Job Object Attributes (as in [RFC2911] [Group 3](#))**

651 The Printer [MUST](#) return the same set of [Job status](#) attributes as [described in for](#) the Print-Job, [Send-](#)  
652 [Document, and Create-Document](#) responses (see [\[RFC2911\]](#) section 3.1.23-2.1.2).

**653 Group 4: Document Object Attributes (new - as in Create-Document Group 3 - see section 3.1.2)**

654 The Printer [MUST](#) return the same set of [Document status](#) attributes as [described in for](#) the Create-  
655 Document [operation](#) response (see section 3.1.2).

### 656 3.4 Send-URI Operation

657 This OPTIONAL operation ~~is identical~~ has the same request and response semantics as the Send-Document  
658 operation (see section 3.3.2) except that a client MUST supply a URI reference ("document-uri" operation attribute)  
659 rather than the document data itself. If a Printer object supports this operation, clients can use both Send-URI or  
660 Send-Document operations to add new documents to an existing multi-document Job object. However, if a client  
661 needs to indicate that the previous Send-URI or Send-Document was the last document, the client MUST use the  
662 Send-Document operation with no document data and the "last-document" flag set to 'true' (rather than using a Send-  
663 URI operation with no "document-uri" operation attribute).

664 If a Printer object supports this operation, it MUST also support the Print-URI operation (see [RFC2911] section  
665 3.2.2).

666 The Printer object MUST validate the syntax and URI scheme of the supplied URI before returning a response, just  
667 as in the Print-URI operation. The IPP Printer MAY validate the accessibility of the document as part of the operation  
668 or subsequently (see [RFC2911] section 3.2.2).

### 669 3.5 Validate-Document Operation

670 This REQUIRED operation allows the client to verify capabilities of a Printer against whatever attributes the client  
671 supplies in the Validate-Document request in combination with the previously submitted partial Job, if any. This  
672 operation ~~is has~~ has the same inputs as the Create-Document operation request (section 3.1) except the Printer does not  
673 create a new Document object. The Printer object returns the same status codes, Operation Attributes (Group 1)  
674 and Unsupported Attributes (Group 2) as the Create-Document operation (see section 3.1.2). However, no Job  
675 Object Attributes (Group 3) and no Document Object Attributes (Group 43) are returned, since no Document object is  
676 created.

677 ~~The Printer performs the same validation for the Validate-Document operation as for the Create-Document operation~~  
678 ~~(section 3.1), with the addition that the client MAY supply the "document-uri" operation attribute (defined in the Send-~~  
679 ~~URI operation in [RFC2911] section 3.3.2). If the client supplies the "document-uri" operation attribute, the Printer~~  
680 ~~MUST validate that the URI scheme is supported and that the referenced data is accessible.~~

681 The client MAY supply a Job object Target, that ~~is,~~ MUST be either (1) a "printer-uri" and a "job-id" operation attribute  
682 or (2) a "job-uri" operation attribute. If supplied, the Job Target MUST identify a job that has been created by Create-  
683 Job ([RFC2911] section 3.2.4), but not yet closed, that is, the client hasn't yet supplied the "last-document" operation  
684 attribute with a 'true' value. When the client supplies the Job object Target, the Printer MUST validate that an  
685 identical Create-Document, Send-Document, or Send-URI operation would have been accepted in the context of the  
686 specified Job and its other Document objects.

687 If the client omits the Job Target by including only the "printer-uri" operation attribute, the Printer performs the same  
688 validation as for a Create-Document in which there were no Job attributes supplied in the Create-Job and no other  
689 Documents. The Printer MUST support the Validate-Document operation with ~~or~~ and without the Job object Target  
690 being present.

691 In addition to the attributes and groups defined for a Create-Document request (see section 3.1.1), the client MAY  
692 supply the "document-uri" operation attribute (defined in the Send-URI operation in [RFC2911] section 3.3.2). If the  
693 client supplies the "document-uri" operation attribute, the Printer MUST validate that the URI scheme is supported  
694 and that the referenced data is accessible<sup>5</sup>.

<sup>5</sup> The PWG PSI [pwg-psi] specification includes a Validate-Document operation with the "document-uri" operation attribute that the Printer MUST validate.

695 If the client discovers that a Validate-Document operation fails, it has the choice of (1) canceling the entire partially  
696 created job, if any, (2) closing the partially created Job as is (with a Send-Document supplying the "last-document"  
697 with a 'true' value) so that the Printer will process the Job, or (3) adding other Document objects (with Create-  
698 Document, Send-Document, and/or Send-URI) and then closing the Job.

699 By using the Validate-Document operation a client can validate that an identical Create-Document operation (or a  
700 Send-Document operation with the document data or a Send-URI operation) would be accepted by the Printer in the  
701 context of the partially submitted Job. The Validate-Document operation also performs the same security negotiation  
702 as the Create-Document operation (see [RFC2911] section 8), so that a client can check that the client and Printer  
703 object security requirements can be met before performing a Create-Document, Send-Document, or Send-URI  
704 operation.

### 705 3.6 Get-Document-Attributes Operation

706 This REQUIRED operation allows a client to request the values of selected attributes of a Document object. This  
707 operation is almost identical to the Get-Job-Attributes operation (see [RFC2911] section 3.3.4). The only differences  
708 are that the operation is directed at a Document object rather than a Job object and the returned attribute group is a  
709 set of Document object attributes rather than a set of Job object attributes.

710 The Printer MUST return the attributes that a client supplied in the Create-Document, Send-Document, or Send-URI  
711 operations, plus any Document Description attributes that the Printer has generated. The Printer MUST NOT return  
712 any Job Level attributes that the Document object inherits, including "document-overrides" (1setOf collection)  
713 member attributes (see [override]), and MUST NOT factor out common Document object attributes and return them  
714 as Job object attributes. Thus the Get-Document-Attributes returns to clients the attributes that clients submitted with  
715 the Job object and with the Document object.

716 The client MAY display to the user any Document attributes inherited from the Job object. However, such a client  
717 MUST query both the Job object using Get-Job-Attributes and the Document object using Get-Document-Attributes  
718 in order to be able to merge the inherited attributes with the explicitly-supplied Document attributes. Furthermore, the  
719 client MAY factor out common explicitly-supplied Document object attributes and display them once as Job object  
720 attributes, instead of with each Document object. However, any such regularization of the display for users is the  
721 policy of the client and is outside the scope of this client-Printer protocol specification. Note: specify any such  
722 regularization or canonicalization policy in the Printer response would have been impossible to agree to.

723 For Document objects, the possible names of attribute groups are:

724 - 'document-template': the subset of the Document Template attributes that apply to a Document object (the "D"  
725 column in Table 8) that the implementation supports for Document objects.

726 - 'document-description': the subset of the Document Description attributes specified in the "Doc" column of  
727 Table 9 that the implementation supports for Document objects.

728 - 'all': the special group 'all' that includes all attributes that the implementation supports for Document objects.

729 Since a client MAY request specific attributes or named groups, there is a potential that there is some overlap. For  
730 example, if a client requests, 'document-name' and 'document-description', the client is actually requesting the  
731 "document-name" attribute once by naming it explicitly, and once by inclusion in the 'document-description' group. In  
732 such cases, the Printer object NEED NOT return the attribute only once in the response even if it is requested  
733 multiple times. The client SHOULD NOT request the same attribute in multiple ways.

734 It is NOT REQUIRED that a Document object to support all attributes belonging to a group (since some attributes are  
735 OPTIONAL). However, it is REQUIRED that the Printer support all these group names for the Document object.

### 736 3.6.1 Get-Document-Attributes Request

737 The following groups of attributes are part of the Get-Document-Attributes Request when the request is directed at a  
738 Document object:

#### 739 Group 1: Operation Attributes

##### 740 Natural Language and Character Set:

741 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section  
742 3.1.4.1.

##### 743 Target:

744 The "document-number" (integer(1:MAX)) operation attribute MUST be supplied immediately after along with  
745 either (1) the "printer-uri" (uri) plus "job-id" (integer(1:MAX)) or (2) the "job-uri" (uri) operation attribute(s)  
746 which define the target Document object for this operation as described in [RFC2911] section 3.1.5. If the  
747 client omits the "document-number" operation attribute, the Printer MUST reject the request and return the  
748 'client-error-bad-request' status code.

##### 749 Requesting User Name:

750 The "requesting-user-name" (name(MAX)) attribute SHOULD be supplied by the client as described in  
751 [RFC2911] section 8.3.

##### 752 "requested-attributes" (1setOf keyword):

753 The client OPTIONALLY supplies this attribute. The Printer MUST support this attribute. It is a set of  
754 attribute names and/or attribute group names in whose values the requester is interested. If the client omits  
755 this attribute, the Printer MUST respond as if this attribute had been supplied with a value of 'all'.

### 756 3.6.2 Get-Document-Attributes Response

757 The Printer object returns the following sets of attributes as part of the Get-Document-Attributes Response:

#### 758 Group 1: Operation Attributes

##### 759 Status Message:

760 In addition to the REQUIRED status code returned in every response, the response OPTIONALLY includes a  
761 "status-message" (text(255)) and/or a "detailed-status-message" (text(MAX)) operation attribute as described  
762 in [RFC2911] sections 13 and 3.1.6.

##### 763 Natural Language and Character Set:

764 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section  
765 3.1.4.2. The "attributes-natural-language" MAY be the natural language of the Document object, rather than  
766 the one requested.

#### 767 Group 2: Unsupported Attributes

768 See [RFC2911] section 3.1.7 for details on returning Unsupported Attributes.

769 The response NEED NOT contain the "requested-attributes" operation attribute with any supplied values  
770 (attribute keywords) that were requested by the client but are not supported by the Printer. If the Printer  
771 object does return unsupported attributes referenced in the "requested-attributes" operation attribute and that  
772 attribute included group names, such as 'all', the unsupported attributes MUST NOT include attributes  
773 described in the standard but not supported by the implementation.

### 774 Group 3: Document Object Attributes

775 This is the set of requested attributes and their current values. The Printer ignores (does not respond with)  
776 any requested attribute or value which is not supported. Furthermore, the Printer MUST NOT return  
777 Document Template attributes that were not supplied by a client in a Create-Document, Send-Document, or  
778 Send-URI request or set by a Set-Document-Attributes request. So the response reflects what was  
779 submitted. The Printer MAY omit returning attributes that are restricted by the Printer's security policy in  
780 force, including whether the requesting user is the user that submitted the job (job originating user) or not  
781 (see [RFC2911] section 8). However, the Printer MUST respond with the 'unknown' value for any supported  
782 attribute (including all REQUIRED attributes) for which the Printer does not know the value, unless it would  
783 violate the security policy. See the description of the "out-of-band" values in the beginning of [RFC2911]  
784 Section 4.1.

## 785 3.7 Get-Documents Operation

786 This REQUIRED operation allows a client to retrieve the list of Document objects belonging to the target Job object.  
787 The client MAY also supply a list of Document attribute names and/or attribute group names. A group of Document  
788 object attributes will be returned for each Document object in the Job.

789 This operation is similar to the Get-Document-Attributes operation (see section 3.5), except that this Get-Documents  
790 operation returns attributes from all Document objects contained in the Job object, instead of from a single selected  
791 Document object in the Job object. As with the Get-Document-Attributes operation the Printer MUST only return  
792 attributes that were submitted by a client when the Document object was created by the Create-Document, Send-  
793 Document, or Send-URI operations and possibly modified by the Set-Document-Attributes operation (see section  
794 3.8).

### 795 3.7.1 Get-Documents Request

796 The client submits the Get-Documents request to a Printer object. The Get-Documents is similar to the Get-Jobs  
797 operations (see [RFC2911] section 3.2.6) except that there are no equivalents to the "which-jobs" and "my-jobs"  
798 operation attributes.

799 The following groups of attributes are part of the Get-Documents Request:

#### 800 Group 1: Operation Attributes

##### 801 **Natural Language and Character Set:**

802 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section  
803 3.1.4.1.

##### 804 **Target:**

805 Either (1) the "printer-uri" (uri) plus "job-id" (integer(1:MAX)) or (2) the "job-uri" (uri) operation attribute(s)  
806 which define the target Job object for this operation as described in [RFC2911] section 3.1.5.

##### 807 **Requesting User Name:**

808 The "requesting-user-name" (name(MAX)) attribute SHOULD be supplied by the client as described in  
809 [RFC2911] section 8.3.

##### 810 **"limit" (integer(1:MAX)):**

811 The client OPTIONALLY supplies this attribute. The Printer object MUST support this attribute. It is an  
812 integer value that determines the maximum number of Documents that a client will receive from the Printer.  
813 The limit is a "stateless limit" in that if the value supplied by the client is 'N', then only the first 'N' Documents  
814 are returned in the Get-Documents Response. There is no mechanism to allow for the next 'M' Documents

815 after the first 'N' Documents. If the client does not supply this attribute, the Printer object responds with all  
816 Documents.

817 **"requested-attributes" (1setOf type2 keyword):**

818 The client OPTIONALLY supplies this attribute. The Printer object MUST support this attribute. It is a set of  
819 Document attribute names and/or attribute groups names in whose values the requester is interested. This  
820 set of attributes is returned for each Document object that is returned. The allowed attribute group names  
821 are the same as those defined in the Get-Document-Attributes operation in section 3.6.1.

822 If the client does not supply this attribute, the Printer MUST respond as if the client had supplied this attribute  
823 with the ~~three~~two values:

824 'document-number' (see section 8.1)  
825 '~~document-id-uri~~' (see section 8.2), '~~document-state~~', and '~~document-state-reasons~~'. ~~ISSUE 03: Are~~  
826 ~~the 3 attributes: 'document-number', 'document-state', and 'document-state-reasons' the right~~  
827 ~~attributes to return when the client does not supply the "requested-attributes" operation attribute?~~  
828 ~~Should we include the "document-id-uri" (uri) attribute that the Printer generates as well?~~  
829

830 **3.7.2 Get-Documents Response**

831 The Printer object returns all of the Document objects up to the number specified by the "limit" attribute that match  
832 the criteria as defined by the attribute values supplied by the client in the request. If the client requests any  
833 Document attributes at all, there is a set of Document Object Attributes returned for each Document object.

834 It is not an error for the Printer to return 0 Documents. If the response returns 0 Documents because there are no  
835 Documents in the Job, then the status code for 0 Documents MUST be 'successful-ok'.

836 **Group 1: Operation Attributes**

837 **Status Message:**

838 In addition to the REQUIRED status code returned in every response, the response OPTIONALLY includes a  
839 "status-message" (text(255)) and/or a "detailed-status-message" (text(MAX)) operation attribute as described  
840 in [RFC2911] sections 13 and 3.1.6.

841 **Natural Language and Character Set:**

842 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section  
843 3.1.4.2.

844 **Group 2: Unsupported Attributes**

845 See [RFC2911] section 3.1.7 for details on returning Unsupported Attributes.

846 The response NEED NOT contain the "requested-attributes" operation attribute with any supplied values  
847 (attribute keywords) that were requested by the client but are not supported by the ~~IPP object~~Printer. If the  
848 Printer object does return unsupported attributes referenced in the "requested-attributes" operation attribute  
849 and that attribute included group names, such as 'all', the unsupported attributes MUST NOT include  
850 attributes described in the standard but not supported by the implementation.

851 **Groups 3 to N: Document Object Attributes**

852 The Printer object responds with one set of Document Object Attributes for each returned Document object.  
853 The Printer object ignores (does not respond with) any requested attribute or value which is not supported or  
854 which is restricted by the security policy in force, including whether the requesting user is the user that  
855 submitted the job (job originating user) or not (see [RFC2911] section 8). However, the Printer object MUST

856 respond with the 'unknown' value for any supported attribute (including all REQUIRED attributes) for which  
857 the Printer object does not know the value, unless it would violate the security policy. See the description of  
858 the "out-of-band" values in the beginning of [RFC2911] section 4.1.

859 The Printer MUST return the Groups [for the requested Job](#) in order of increasing "document-number"  
860 [Document Description](#) attribute value.

### 861 3.8 Set-Document-Attributes Operation

862 This OPTIONAL operation allows a client to set the values of the attributes of a Document object after the Document  
863 object was submitted to the Printer. In the request, the client supplies the set of Document keyword attribute names  
864 and values that are to be set. In the response, the [IPP object Printer](#) returns success or rejects the entire request  
865 with indications of which attribute or attributes could not be set.

866 This operation is almost identical to the Set-Job-Attributes operation and follows the same rules for validation (see  
867 [set-ops] section 4.2). The only differences are that the Set-Document-Attributes operation is directed at a Document  
868 object rather than a Job object. As with the Set-Job-Attributes operation, The Set-Document-Attributes operation  
869 can add an attribute to the Target object, accepts the 'delete-attributes' out-of-band value to remove an attribute from  
870 the Target object. In addition the validation is the same as the Create-Document, Send-Document, and Send-URI  
871 operations that create Document objects, i.e., the Printer validation depends on the "xxx-supported" Printer  
872 Description attributes (see [RFC2911] section 3.1).

873 If a client supplies a document attribute in a Set-Document-Attributes request that the Printer supports, and the  
874 document was originally submitted without supplying that attribute, the Printer adds the attribute to the Document  
875 object.

876 If the client supplies a document attribute with the "out-of-band" value 'delete-attribute' (see [set-ops] section 8.2),  
877 then the Printer MUST remove the attribute and all of its values from the Document object, if present. The semantic  
878 effect of the client supplying the 'delete-attribute' value in a Set-Document-Attributes operation MUST be the same as  
879 if the attribute had not been supplied with the Document object in the Document Creation operation, i.e., the Printer  
880 applies its default attribute or behavior with lower precedence than the PDL (see the beginning of [RFC2911] section  
881 4.2 and [RFC2911] 3.2.1.1). Any subsequent query of the Document object using Get-Document-Attributes or Get-  
882 Documents MUST NOT return any attribute that has been deleted using the 'delete-attribute' out-of-band value.  
883 However, a client can re-establish such a deleted Document attribute with any supported value(s) using a  
884 subsequent Set-Document-Attributes operation.

885 If the client supplies an attribute in a Set-Document-Attributes request with the 'delete-attribute' value and that  
886 attribute is not present on the Document object, the Printer ignores that supplied attribute in the request, does not  
887 return the attribute in the Unsupported Attributes group, and returns the 'successful-ok' status code, if there are no  
888 other problems with the request.

889 The validation of the Set-Document-Attributes request is performed by the Printer as if the document had been  
890 submitted originally with the new attribute values (and the deleted attributes removed) and with "ipp-attribute-fidelity"  
891 set to 'true', i.e., all modified attributes Document attributes and values MUST be supported in combination with the  
892 Document attributes not modified. If such a Document Creation operation would have been accepted, then the Set-  
893 Document-Attributes MUST be accepted. If such a Document Creation operation would have been rejected, then the  
894 Set-Document-Attributes MUST be rejected and the Document MUST be unchanged. In addition, if any of the  
895 supplied attributes are not supported, are not settable, or the values are not supported, the Printer object MUST  
896 reject the entire operation; the Printer object MUST NOT partially set some of the supplied attributes. In other words,  
897 after the operation, all the supplied attributes MUST be set or none of them MUST be set, thus making the Set-  
898 Document-Attributes an atomic operation.

899 The [IPP object Printer](#) MUST accept or reject this operations when the Document's READ-ONLY "document-state"  
900 attribute has the values shown in Table 5. The document's current state MUST affect whether the [IPP object Printer](#)

901 accepts or rejects the request. However, the Set-Document-Attributes operation MUST NOT change the state of the  
 902 Document object (since the Document is a passive object and the Document state is a subset of the Job State). For  
 903 example, in the case where the operation creates a request for unavailable resources, the Job (but not the  
 904 Document) transitions to a new state. Table 5 shows the allowed behaviors in each document state.

905 **Table 5 - Document State Table for the Set-Document-Attributes operation**

Current "document-state"	New "document-state" (no change)	IPP object Printer's response status code and "action":
'pending'	'pending'	'successful-ok'
'pending'	'pending'	'successful-ok' - needed resources are not ready (the Job MAY change state, but the Document MUST NOT).
'processing'	'processing'	'successful-ok' or 'client-error-not-possible' depending on implementation, including the attributes being set, whether the document has started marking media, etc.
'completed'	'completed'	'client-error-not-possible'
'canceled'	'canceled'	'client-error-not-possible'
'aborted'	'aborted'	'client-error-not-possible'

906

907 This operation MUST NOT change the value of attributes not specified in the operation unless the definition of the  
 908 attribute explicitly specifies such side-effects. In general, Document attribute definitions that are settable will not  
 909 define side-effects on other attributes that are settable, only side effects on READ-ONLY attributes, if any.

910 **3.8.1 Settable and READ-ONLY Document Description attributes**

911 If the Printer supports the Set-Document-Attributes operation, then it SHOULD support setting of:  
 912 all Document Template document ("xxx") attributes  
 913 that the implementation supports (see the column labeled "D" in Table 8).

914 Almost all Document Description attributes (see [RFC2911] section 4.3) MUST NOT be settable, i.e., they are  
 915 defined to be READ-ONLY. Only Document Description attributes marked with "(r/w)" in Table 8 MAY be settable  
 916 using Set-Document-Attributes. The Printer MUST reject a Set-Document-Attributes request that attempts to set any  
 917 attributes in Table 8 that is not marked "(r/w)".

918 Note: From now on, all extensions that define new object attributes will indicate whether or not the attributes are  
 919 READ-ONLY, by including the "READ-ONLY" adjective in their descriptions and/or explicitly stating whether they  
 920 MAY be settable.

921 *Access Rights:* The authenticated user (see [RFC2911] section 8.3) performing this operation must either be the job  
 922 owner (as determined in the Job Creation operation) or an operator or administrator of the Printer object (see  
 923 [RFC2911] Sections 1 and 8.5).

924 **3.8.2 Set-Document-Attributes Request**

925 The following sets of attributes are part of the Set-Document-Attributes Request:

926 **Group 1: Operation Attributes**

927 **Natural Language and Character Set:**

928 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section  
 929 3.1.4.1.

930 **Target:**

931 The client MUST supply the "document-number" (integer(1:MAX)) ~~MUST be supplied operation attribute~~  
932 immediately after along with either (1) the "printer-uri" (uri) plus "job-id" (integer(1:MAX)) or (2) the "job-uri"  
933 (uri) operation attribute(s) which define the target Document object for this operation as described in  
934 [RFC2911] section 3.1.5. If the client omits the "document-number" operation attribute, the Printer MUST  
935 reject the request and return the 'client-error-bad-request' status code.

936 Note: There is no way in a single operation for the client to set all of a Job's Document objects to the same  
937 attribute value. Either (1) the client sets the corresponding attribute in each Document object in the Job with  
938 separate Set-Document-Attributes requests, or (2) the client sets the corresponding attribute at the Job Level  
939 using the Set-Job-Attributes operation. Setting the corresponding attribute at the Job Level (or supplying that  
940 attribute initially in the Job Creation operation) causes each Document object to inherit the Job Level  
941 attribute value, if the Document object doesn't have a corresponding explicit attribute supplied at the  
942 Document Level. In other words, supplying an attribute at the Job Levels will affect all the Job's Document  
943 objects that don't have that attribute also explicitly supplied at the Document Level. ~~ISSUE 04: OK that we~~  
944 ~~don't have a way to set all documents in a single request? The Printer MUST reject the request with 'client-~~  
945 ~~error-bad-request', if the client does not supply the "document-number" operation attribute. There is no way~~  
946 ~~to set all documents explicitly in a single request, since a failure would require the Printer to back out all~~  
947 ~~changes in all documents. However, if the client sets the corresponding attribute at the Job Level using the~~  
948 ~~Set-Job-Attributes operation, all documents in the job will be affected that don't have that attribute explicitly~~  
949 ~~supplied at the Document Level.~~

950 **Requesting User Name:**

951 The "requesting-user-name" (name(MAX)) attribute SHOULD be supplied by the client as described in  
952 [RFC2911] section 8.3.

953 **Group 2: Document Attributes**

954 The client MUST supply a set of Document Template attributes with one or more values (including explicitly  
955 allowed out-of-band values) as listed in column labeled "D" in Table 8 - Job Template and Document  
956 Template attributes and Document Description attributes flagged with "(r/w)" and listed in the column labeled  
957 "Doc" in Table 9 - Job and Document Description attributes, and any attribute extensions supported by the  
958 Printer. The value(s) of each Document attribute supplied in Group 2 replaces the value(s) of the  
959 corresponding Document attribute on the target Document object. For attributes that can have multiple  
960 values (1setOf), all values supplied by the client replace all values of the corresponding Document object  
961 attribute.

962 In order to set the Document's "document-message" Document Description attribute (see section 8.10), the  
963 client MUST supply the attribute in Group 2, rather than supplying a "document-message" operation attribute  
964 in Group 1.

965 If the client supplies an "xxx" attribute with the 'delete-attribute' out-of-band value (see [set-ops] section 8.2),  
966 the Printer MUST remove the "xxx" attribute from the Document object, if present.

967 **3.8.3 Set-Document-Attributes Response**

968 The ~~IPP object~~ Printer returns the following sets of attributes as part of the Set-Document-Attributes Response:

969 **Group 1: Operation Attributes**970 **Status Message:**

971 In addition to the REQUIRED status code returned in every response, the response OPTIONALLY includes a  
972 "status-message" (text(255)) and/or a "detailed-status-message" (text(MAX)) operation attribute as described  
973 in [RFC2911] sections 13 and 3.1.6.

974 **Natural Language and Character Set:**  
 975 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section  
 976 3.1.4.2.

977 **Group 2: Unsupported Attributes**

978 See [RFC2911] section 3.1.7 for details on returning Unsupported Attributes.

979 If some of the attributes in the operation fail to validate, the Printer MUST reject the operation, MUST NOT  
 980 change any Document attributes, and MUST return the indicated status code below. In this group, the  
 981 Printer MUST also return all attributes that fail to validate. The following are the reasons that an attribute  
 982 fails to validate and the value returned for the attribute, along with the indicated status code and order of  
 983 detection:

- 984 1. The number of attributes supplied by the client exceeds the maximum number that the Printer  
 985 supports in a Set-Printer-Attributes request: return the 'client-error-request-entity-too-large' (see  
 986 [RFC2911] section 13.1.4.9).
- 987 2. The Printer doesn't support the attribute: return the attribute with the 'unsupported' out-of-band  
 988 attribute value (see [RFC2911] section 3.1.7 and [RFC2910]) and the 'client-error-attributes-or-  
 989 values-not-supported' (see [RFC2911] section 13.1.4.12).
- 990 3. The attribute is READ-ONLY (in its definition) or is not-settable in this implementation: return the  
 991 attribute with the 'not-settable' out-of-band attribute value (see [set-ops] section 8.1) and the  
 992 'client-error-attributes-not-settable' status code (see [set-ops] section 7.1).
- 993 4. The Printer doesn't support the value: if the attribute in the operation has a single value return it.  
 994 If the attribute in the operation is multi-valued, return only those values in a 1setOf that are not  
 995 supported. Return the 'client-error-attributes-or-values-not-supported' status code (see [RFC2911]  
 996 section 13.1.4.12).
- 997 5. The values of some of the supplied attributes conflict with one another and/or other Document  
 998 attribute values not being set: if the conflicting attribute in the operation has a single value return  
 999 the attribute and the value. If the attribute in the operation is multi-valued, return only the attribute  
 1000 and those values in a 1setOf that are conflicting with other attributes. Return the 'client-error-  
 1001 conflicting-attributes' status code (see [RFC2911] section 13.1.4.15).

1002 **3.9 Cancel-Document Operation**

1003 This ~~REQUIRED~~ ~~OPTIONAL~~<sup>6</sup>-operation allows a client to cancel a specified Document in a specified Print Job from  
 1004 the time the Document is created up to, but not including, the time it is completed, canceled, or aborted. Since a  
 1005 Document might already be printing by the time a Cancel-Document is received, some media sheet pages might be  
 1006 printed before the document processing is actually terminated.

1007 ~~ISSUE 05: OK, that Cancel-Document operation is OPTIONAL, while the Cancel-Job operation is REQUIRED by~~  
 1008 ~~[RFC2911]?~~

1009 The Cancel-Document operation does not remove the Document from the Job and Printer, but only sets the specified  
 1010 Document's "document-state" Document Description attribute to 'canceled' and the Document's "document-state-  
 1011 reasons" Document Description attribute to 'canceled-by-user' or 'cancel-by-operator'. If the Job object is printed  
 1012 again using operations such as the Reprocess-Job operation (see [adm-ops] section 4.1) or the Restart-Job  
 1013 operation (see [RFC2911] section 3.3.7), any canceled Documents are also printed again. Thus Cancel-Document

<sup>6</sup> The Cancel-Document operation is OPTIONAL, whereas the corresponding Cancel-Job is REQUIRED.

1014 has the same semantics as Cancel-Job (see [RFC2911] section 3.3.3), which only cancels the processing of the job,  
 1015 and doesn't delete the Job object itself. See the Delete-Document operation (section 3.11) to remove the Document  
 1016 object itself immediately from the Job and Printer.

1017 The Cancel-Document operation does not affect the states of any of the other Document objects in the job. If the Job  
 1018 was processing and there are more Documents to be processed, the Printer does so. If there are no further  
 1019 Documents to process, the Job moves to the 'completed' state as usual whenever there is no more processing to be  
 1020 done.

1021 The **IPP object Printer** MUST accept or reject the request based on the document's current state and transition the  
 1022 document to the indicated new state as follows:

Current "document-state"	New "document-state"	Printer object's response status code and action:
'pending'	'canceled'	'successful-ok'
'processing'	'canceled'	'successful-ok'
'processing'	'processing'	'successful-ok' See Rule 1
'processing'	'processing'	'client-error-not-possible' See Rule 2
'completed'	'completed'	'client-error-not-possible'
'canceled'	'canceled'	'client-error-not-possible'
'aborted'	'aborted'	'client-error-not-possible'

1023 Rule 1: If the implementation requires some measurable time to cancel the document in the 'processing' document  
 1024 states, the Printer object MUST add the 'processing-to-stop-point' value to the document's "document-state-reasons"  
 1025 attribute and then transition the document to the 'canceled' state when the processing ceases (see [RFC2911]  
 1026 section 4.3.8).

1027 Rule 2: If the Document object already has the 'processing-to-stop-point' value in its "document-state-reasons"  
 1028 attribute, then the Printer object MUST reject a Cancel-Document operation.

1029 *Access Rights:* The authenticated user (see [RFC2911] section 8.3) performing this operation must either be the job  
 1030 owner or an operator or administrator of the Printer object (see [RFC2911] sections 1 and 8.5). Otherwise, the **IPP**  
 1031 **object Printer** MUST reject the operation and return: 'client-error-forbidden', 'client-error-not-authenticated', or 'client-  
 1032 error-not-authorized' as appropriate.

### 1033 3.9.1 Cancel-Document Request

1034 The following groups of attributes are part of the Cancel-Document Request:

#### 1035 Group 1: Operation Attributes

##### 1036 Natural Language and Character Set:

1037 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section  
 1038 3.1.4.1.

##### 1039 Target:

1040 The **client MUST supply the** "document-number" (integer(1:MAX)) **operation attribute MUST be supplied**  
 1041 **immediately after along with** either (1) the "printer-uri" (uri) plus "job-id" (integer(1:MAX)) or (2) the "job-uri"  
 1042 (uri) operation attribute(s) which define the target Document object for this operation as described in section  
 1043 [RFC2911] 3.1.5. **If the client omits the "document-number" operation attribute, the Printer MUST reject the**  
 1044 **request and return the 'client-error-bad-request' status code.**

**Requesting User Name:**

The "requesting-user-name" (name(MAX)) attribute SHOULD be supplied by the client as described in [RFC2911] section 8.3.

**3.9.1.1 document-message (text(127)) operation attribute:**

The client ~~OPTIONALLY MAY~~ supplies this operation attribute. ~~The Printer object OPTIONALLY supports this attribute. If the Printer supports this attribute, the Printer MUST also support the corresponding "document-message" (text(127)) Document Description attribute (see section 8.10) and copy this value to the "document-message" Document Description attribute. The end user can use this Document Description attribute as a message to the operator and the operator can use it as a message to the user. The Printer MAY print this message on a document start sheet for this document, if any.~~

~~It is a message to the operator. This "message" attribute is not the same as the "job-message-from-operator" attribute. The "job-message-from-operator" attribute is used to report a message from the operator to the end user that queries that attribute. This "message" operation attribute is used to send a message from the client to the operator along with the operation request. It is an implementation decision of how or where to display this message to the operator (if at all). ISSUE 06: OK to have the "message" operation attribute supplied in the Cancel-Document operation be sent to the operator in some unspecified way, like Cancel-Job, which could include setting the Job's "message-to-operator" Job Template Job attribute or should we just do away with the "message" operation attribute in the Cancel-Document operation?~~

The Printer MUST ignore the new "job-message-from-operator" operation attribute (see [adm-ops] section 6) for this operation, since that is a job only attribute and Cancel-Document is a Document operation.

**3.9.2 Cancel-Document Response**

The following sets of attributes are part of the Cancel-Document Response:

**Group 1: Operation Attributes**

**Status Message:**

In addition to the REQUIRED status code returned in every response, the response OPTIONALLY includes a "status-message" (text(255)) and/or a "detailed-status-message" (text(MAX)) operation attribute as described in [RFC2911] sections 13 and 3.1.6.

**Natural Language and Character Set:**

The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section 3.1.4.2.

**Group 2: Unsupported Attributes**

See [RFC2911] section 3.1.7 for details on returning Unsupported Attributes.

Once a successful response has been sent, the implementation guarantees that the Document will eventually end up in the 'canceled' state. Between the time of the Cancel-Document operation is accepted and when the document enters the 'canceled' document-state (see section 8.5), the "document-state-reasons" attribute (see section 8.7) SHOULD contain the 'processing-to-stop-point' value which indicates to later queries that although the Document might still be 'processing', it will eventually end up in the 'canceled' state, not the 'completed' state.

## 1082 3.10 Cancel-Current-Document Operation<sup>7</sup>

1083 This OPTIONAL operation allows a client to cancel either (1) any current Document of the current Job on the target  
 1084 Printer or (2) the specified document in a specified job if they are the current document and job on the Printer. One  
 1085 of the uses of this operation is by operators in an emergency, where the job-id and document-number might be  
 1086 unknown to the operator. See section 3.9 for the semantics of canceling a Document and what values the Printer  
 1087 sets the Document's Document Description attributes. Since a Document might already be marking by the time a  
 1088 Cancel-Current-Document is received, some media sheet pages might be printed before the document is actually  
 1089 terminated.

1090 If the client does not supply a "job-id" and "document-number" operation attributes, the Printer MUST accept the  
 1091 request and cancel the current document if there is a current document in the 'processing' state; otherwise, it MUST  
 1092 reject the request and return the 'client-error-not-possible' status code. If more than one document is in the  
 1093 'processing' or 'processing-stopped' states, the one that is marking is canceled and the others are unaffected.

1094 Warning: On a shared printer, there is a race condition. Between the time that a user issues this operation and its  
 1095 acceptance, the current document might change to a different document or even a different job. If the user or  
 1096 operator is authenticated to cancel the new job, the wrong document is canceled. To prevent this race from  
 1097 canceling the wrong document, the client MAY supply the "job-id" and "document-number" operation attributes which  
 1098 is checked against the current job's "job-id" and the current Document's "document-number". If the job identified by  
 1099 the "job-id" attribute is not the current job on the Printer and the "document-number" is not the current Document in  
 1100 that current Job, i.e., is not in the 'processing' state, the Printer MUST reject this operation and return the 'client-  
 1101 error-not-possible' status code. Otherwise, the Printer cancels the specified document.

1102 *Access Rights:* The authenticated user (see [RFC2911] section 8.3) performing this operation must either be the job  
 1103 owner (as determined in the Job Creation operation) or an operator or administrator of the Printer object (see  
 1104 [RFC2911] Sections 1 and 8.5).

1105 The Cancel-Current-Document Request and Cancel-Current-Document Response have the same attribute groups  
 1106 and attributes as the Pause-Printer operation (see [RFC2911] section 3.2.8) with the addition of the following Group  
 1107 1 Operation attributes in the request:

### 1108 3.10.1 job-id (integer(1:MAX)) operation attribute

1109 The client OPTIONALLY supplies this Operation attribute in order to verify that the identified job is still the  
 1110 current job on the target Printer object. The [IPP-objectPrinter](#) MUST supports this operation attribute, if it  
 1111 supports this operation.

### 1112 3.10.2 document-number (integer(1:MAX)) operation attribute

1113 The client OPTIONALLY supplies this Operation attribute in order to verify that the identified document is still  
 1114 the current document on the target Printer object. The [IPP-objectPrinter](#) MUST supports this operation  
 1115 attribute, if it supports this operation.

### 1116 3.10.3 document-message (text(127)) operation attribute

1117 The client MAY supply this operation attribute. If the Printer supports this attribute, the Printer MUST also  
 1118 support the corresponding "document-message" (text(127)) Document Description attribute (see section  
 1119 8.10) and copy this value to the "document-message" Document Description attribute. The end user can use  
 1120 this Document Description attribute as a message to the operator and the operator can use it as a message  
 1121 to the user. The Printer MAY print this message on a document start sheet for this document, if any.

<sup>7</sup> In some modeling regimes, the Cancel-Current-Document operation might be a Device method, rather than a Job or Document method.

1122 The Printer MUST ignore the new “job-message-from-operator” operation attribute (see [adm-ops] section 6) [for this](#)  
 1123 [operation](#), since that is a job only attribute and Cancel-Current-Documents is a Document operation. ~~ISSUE 07: OK~~  
 1124 ~~not to have a “document-message-from-operator” for use with Document operations, like with the Cancel-Current-~~  
 1125 ~~Document operation that an operator is likely to use?~~

### 1126 3.11 Delete-Document Operation

1127 This OPTIONAL operation removes the specified Document object and its data immediately from the specified Job.  
 1128 The Printer MUST reject the request if the Document is in any state, but ‘pending’ (there is no ‘pending-held’ state for  
 1129 Documents). The Printer does not reassign the “document-number” Document Description attribute values of the  
 1130 remaining Document objects in the Job, so that the deleted Document object leaves a gap in the document  
 1131 numbering space for the Job. The Printer MUST return a ‘client-error-not-found’ status code, in a subsequent Get-  
 1132 Document-Attributes operation for this Document object specifying its former “document-number”. This operation is  
 1133 similar to the Purge-Jobs operation which immediately deletes all jobs from the Printer. However, the Delete-  
 1134 Document operation only deletes a single Document from the specified Job.

1135 *Access Rights:* The authenticated user (see [RFC2911] section 8.3) performing this operation MUST be an operator  
 1136 or administrator of the Printer object (see [RFC2911] sections 1 and 8.5). Otherwise, the Printer MUST reject the  
 1137 operation and return: ‘client-error-forbidden’, ‘client-error-not-authenticated’, or ‘client-error-not-authorized’ as  
 1138 appropriate. This operation requires operator/administrator privileges, otherwise a rogue client could submit, then  
 1139 delete, at will using up valuable spooling space. [Instead of using this operation,](#) Unprivileged users use Cancel-  
 1140 Document which goes through the normal accounting, if any.

1141 The Delete-Document request and Delete-Document response have the same attribute groups and attributes as the  
 1142 Cancel-Document operation (see section 3.9).

## 1143 4 Semantic extensions to Job operations

1144 This section defines effects that Job operations have on the Document object. Printer and Subscription object (Event  
 1145 Notification [ntfy]) operations MUST have no effect on the Document object and the Document object has no effect  
 1146 on the semantics of the Printer and Subscription operations. The Job operations that MUST NOT have any effect on  
 1147 the Document object because they are defined to affect the Job object as a whole are: **Get-Job-Attributes**<sup>8</sup>  
 1148 ([RFC2911] section 3.3.4), **Get-Jobs**<sup>9</sup> ([RFC2911] section 3.2.6), **Hold-Job** ([RFC2911] section 3.3.5), **Promote-Job**  
 1149 ([adm-ops] section 4.4.1), **Release-Held-New-Jobs** ([adm-ops] section 3.3.2), **Resume-Job** ([adm-ops] section  
 1150 4.3.2), **Schedule-Job-After** ([adm-ops] section 4.4.2), **Set-Job-Attributes** ([set-ops] section 4.2), and **Validate-Job**  
 1151 ([RFC2911] section 3.2.3).

1152 The Job operations that affect Document objects or that Document objects affect the semantics of the Job operations  
 1153 are, in alphabetical order:

### 1154 4.1 Cancel-Current-Job ([adm-ops] section 4.2)

1155 The Printer sets the “document-state” Document Description attribute to ‘canceled’ and the “document-state-reasons”  
 1156 Document Description attribute to ‘canceled-by-xxx’ for any documents in the current Job that have not yet reached a  
 1157 terminal state (‘completed’, ‘canceled’, or ‘aborted’), where “xxx” is ‘user’ or ‘operator’. See [adm-ops] section 4.2.

<sup>8</sup> The Printer MUST NOT copy up to the Job object any Document attributes supplied at the Document Level in Create-Document, Send-Document, or Send-URI to the Job object as observable by the client in any Get-Job-Attributes operation responses.

<sup>9</sup> The Printer MUST NOT copy up to the Job object any Document attributes supplied at the Document Level in Create-Document, Send-Document, or Send-URI to the Job object as observable by the client in any Get-Job-Attributes operation responses.

## 1158 4.2 Cancel-Job ([RFC2911] section 3.3.3)

1159 The Printer sets "document-state" Document Description attribute to 'canceled' and the "document-state-reasons"  
1160 Document Description attribute to 'canceled-by-user' or 'canceled-by-operator' for *all* Document objects in the  
1161 identified Job that have not yet reached a terminal state ('completed', 'canceled', or 'aborted').

## 1162 4.3 Create-Job ([RFC2911] section 3.2.4)

1163 The Printer creates the Job object with all of the mixture of Job and Document attributes supplied in the Create-Job  
1164 operation. The Document objects that are subsequently created for the specified Job inherit the Document attributes  
1165 from the Job object. However, the Printer **MUST NOT** copy down any Job Level attributes, including "document-  
1166 overrides" ([override]) to the Document object as observable by a client in any Get-Documents or Get-Documents-  
1167 Attributes operation responses.

## 1168 4.4 Print-Job ([RFC2911] section 3.2.1)

1169 The Printer creates one Document object as a side effect of the Print-Job operation. All of the attributes supplied by  
1170 the client **MUST** remain at the Job Level as part of the Job object. Any Document attributes supplied have affect on  
1171 the Document object because the Document object inherits them from the Job object. The Printer **MUST** populate  
1172 the single Document object's "document-state", "document-state-reasons", and "document-number" Document  
1173 Description attributes with appropriate values. Thus a Get-Documents or Get-Documents-Attributes for a Job created  
1174 by Print-Job will return no attributes supplied by the client, but will return the populated Document Description  
1175 attributes.

## 1176 4.5 Print-URI ([RFC2911] section 3.2.2)

1177 The Printer creates one Document object as a side effect of the Print-URI operation. All of the attributes supplied by  
1178 the client **MUST** remain at the Job Level as part of the Job object. Any Document attributes supplied have affect on  
1179 the Document object because the Document object inherits them from the Job object. The Printer **MUST** populate  
1180 the Document object's "document-state", "document-state-reasons", and "document-number" Document Description  
1181 attributes with appropriate values. Thus a Get-Documents or Get-Documents-Attributes for a Job created by Print-Job  
1182 will return no attributes supplied by the client, but will return the populated Document Description attributes.

## 1183 4.6 Purge-Jobs ([RFC2911] section 3.2.9)

1184 The Printer removes all Job and all of their contained Document objects.

## 1185 4.7 Release-Job ([RFC2911] section 3.3.6)

1186 The Printer moves the job to the 'pending' state, if there are no other "job-state-reasons" to hold the job. The values  
1187 of the "document-state-reasons" attributes **MUST NOT** affect job scheduling (see Table 11), only the Job's "job-state-  
1188 reasons" values. ~~ISSUE 08: Should a Document's "document-state-reasons" keep a Job from being released with~~  
1189 Release-Job? Or should there be no such reasons for the "document-state-reasons" Document Description  
1190 attribute? For example, what about the 'resources-are-not-ready' value of the "document-state-reasons" Document  
1191 Description attribute? Or maybe the 'resources-are-not-ready' is only for the "job-state-reasons" Job Description  
1192 attribute. Then there wouldn't be any "document-state-reasons" that affect job scheduling.

## 1193 4.8 Reprocess-Job ([adm-ops] section 4.1)

1194 The Printer processes the Job again by processing *all* Documents in the Job, including ones that have been  
1195 canceled by a previous Cancel-Document operation. Therefore, the Printer removes any 'canceled-by-xxx' values  
1196 from any of the "document-state-reasons" attributes and the Job's "job-state-reasons" attributes.

## 1197 4.9 Restart-Job ([RFC2911] section 3.3.7)

1198 The Printer starts the Job over again by processing *all* Documents in the Job, including ones that have been  
1199 canceled by a previous Cancel-Document operation. Therefore, the Printer removes any 'canceled-by-xxx' values  
1200 from any of the "document-state-reasons" attributes and the Job's "job-state-reasons" attributes and

## 1201 4.10 Send-Document ([RFC2911] section 3.3.1)

1202 The Printer accepts a new Document Attributes group ([Group 4](#)) that the client can supply Document Template  
1203 attribute and creates a Document object (see section 3.3).

## 1204 4.11 Send-URI ([RFC2911] section 3.3.2)

1205 The Printer accepts a new Document Attributes group ([Group 4](#)) that the client can supply Document Template  
1206 attribute and creates a Document object (see section 3.4).

## 1207 4.12 Suspend-Current-Job ([adm-ops] section 4.3.1)

1208 The Printer suspends the current job and sets the Job's "job-state" Job Description attribute to 'processing-stopped'  
1209 and "job-state-reasons" to 'job-suspended-by-xxx', where 'xxx' is 'user' or 'operator'. The Documents' "document-  
1210 state" and "document-state-reasons" Document Description attributes are unaffected (but the Documents are not  
1211 processed any further, since the Job is stopped).

## 1212 5 Attribute Precedence

1213 This section defines the Attribute Precedence rules for Queue Override attributes, Page Override attributes,  
1214 Document Object attributes, Document Override attributes, Job Object attributes, PDL instructions, PDL Interpreter  
1215 initialization files, and Printer object defaults. Since each attribute can be specified for all of these levels, it is  
1216 important to define which level takes precedence when the same attribute occurs at different levels with differing  
1217 values.

1218 The attribute precedence model has the following features:

- 1219 1) In principle, each defined attribute can occur at each of the precedence levels.
- 1220 2) Attributes can be introduced and modified at different points in the job workflow, e.g., in the application, print  
1221 driver, submission client, protocol, and Printer:
- 1222 • Attributes are supplied by different agents in the system: application, user, print driver, administrator,  
1223 operator, Printer object, and the output device hardware.
  - 1224 • Attributes are supplied at different points in time: PDL generation, job submission, job acceptance, job  
1225 pending, job processing.

1226 3) Attributes can be introduced and modified at different points in the job workflow, e.g., in the application, print  
1227 driver, submission client, protocol, and Printer.

1228 4) The later that an attribute is introduced into the work flow or the closer the specified scope of the attribute is  
1229 to the affected object, the higher the precedence is assigned to that attribute, since precedence is intended  
1230 to reflect the user's wishes.

1231 The following levels of Attribute Precedence are defined in order of decreasing priority:

- 1232 1. **queue override** - The value that the Printer enforces for any job submitted to it (see [prod-print2] section  
1233 3.1). Set by the administrator when configuring the Printer by setting an "xxx-supported" Printer attribute  
1234 to contain a single value, i.e., the override value. Example: the administrator sets the Printer's "sides" =  
1235 'two-sided-long' so that all jobs submitted to that (logical) Printer are printed two-sided flipped along the  
1236 long edge.

1237 Note: The **queue override** level is only available for Printers that support the 'guaranteed' value for  
1238 its "pdl-override-supported" attribute (see [prod-print2] section 8). All other levels are available for all  
1239 Printers independent of the "pdl-override-supported" value.

- 1240 2. **Document Level - page override programming** - The special "page-overrides" collection Document  
1241 Template attribute (see [override]) supplied at the Document Level, i.e., that is, in a Create-Document,  
1242 Send-Document, or Send-URI operation, that contains the attributes that are to have the page override  
1243 status for the specified ranges of pages in the Input-Document or the Output-Document. Supplied by the  
1244 client when submitting a Document object, or set by the user or operator after the Document has been  
1245 accepted either using the Set-Document-Attributes operation, or by the operator using means local to the  
1246 Printer. Example: "page-overrides" = {"page-number" = '1'; "media" = 'letterhead'}

- 1247 3. **Job Level - page override programming** - The special "page-overrides" collection Job Template  
1248 attribute (see [override]) supplied at the Job Level, that is, in a Job Creation operation, that contains the  
1249 attributes that are to have the page override status for the specified ranges of pages in the Input-  
1250 Document or the Output-Document. Supplied by the client when submitting a job either in the protocol,  
1251 or set by the user or operator after the job has been accepted either using the Set-Job-Attributes  
1252 operation, or by the operator using means local to the Printer. Example: "page-overrides" = {"page-  
1253 number" = '1'; "media" = 'letterhead'}

- 1254 3.4. **Document Level - Document object attributes** - The Document attributes supplied at the Document  
1255 Level, i.e., that is, in a Create-Document, Send-Document, or Send-URI operation to apply to the Input  
1256 Document. Supplied by the client when submitting a Document object, or set by the user or operator  
1257 after the Document has been accepted either using the Set-Job-Attributes operation, or by the operator  
1258 using means local to the Printer. Examples: "media" = 'na-letter' and "copies" = '2'.

- 1259 ~~4. **Job Level - page override programming** - A special "page-overrides" collection Job Template attribute~~  
1260 ~~(see [override]) supplied at the Job Level, i.e., in a Job Creation operation, that contains the attributes~~  
1261 ~~that are to have the page override status for the specified ranges of pages in the Input-Document or the~~  
1262 ~~Output-Document. Supplied by the client when submitting a job either in the protocol, or set by the user~~  
1263 ~~or operator after the job has been accepted either using the Set-Job-Attributes operation, or by the~~  
1264 ~~operator using means local to the Printer. Example: "page-overrides" = {"page-number" = '1'; "media" =~~  
1265 ~~'letterhead'}~~

- 1266 5. **Document Level - document override programming** - The special "document-overrides" collection  
1267 operation attribute (see [override]) supplied by the client in the Send-Document or Send-URI request.  
1268 The collection contains the member attributes that are to override attributes specified at lower  
1269 precedence for the specified range of documents, including the current Document and subsequently  
1270 created Documents. Clients that support the Document object SHOULD supply the attributes as

1271  
1272  
1273

Document Template attributes directly when creating the Document, instead of using the operation attribute mechanism. Example: "document-overrides" = {"input-documents" = '5:5'; "media" = 'transparency'}

1274  
1275  
1276  
1277  
1278  
1279

- 6. **Job Level - document override programming** - The special "document-overrides" collection Job Template attribute (see [override]) that contains the attributes that are to have the document override status for the specified Input-Documents or Output-Documents. Supplied by the client when submitting a job either in the protocol, or set by the user or operator after the job has been accepted either using the Set-Job-Attributes operation, or by the operator using means local to the Printer. Example: "document-overrides" = {"input-documents-number" = '5:5'; "media" = 'transparency'}

1280  
1281  
1282  
1283  
1284

- 7. **Job Level - Job object and Document object attributes** - The Job attributes and Document attributes supplied at the Job Level, i.e., with a Create-Job, Print-Job, or Print-URI operation. Supplied by the client when submitting a Job in the protocol, or set by the user or operator after the job has been accepted either using the Set-Job-Attributes operation, or by the operator using means local to the Printer. Examples: "media" = 'na-letter' and "copies" = '2'.

1285  
1286  
1287  
1288  
1289  
1290

- 8. **PDL document data** - an instruction in the PDL document data. Supplied by the application or print driver that created the PDL. Example: PostScript setPageDevice specifying na-letter media. Whether PDL document data is actually lower precedence than the preceding levels depends on the implementation as expressed in the "pdl-override-supported" Printer Description attribute (see [RFC2911] section 4.4.28 and [prod-print2] section 8.1).

1291  
1292  
1293  
1294  
1295  
1296

Job Template and Document Template attributes of the form "xxx-requested", such as "orientation-requested" (see [RFC2911] section 4.2.10) have a lower priority than the PDL. If the PDL contains a corresponding instruction, that PDL instruction will be used instead of the supplied "xxx-requested" attribute. For example, PostScript PDL data always has a well-defined orientation, so that "orientation-requested" never affects the result. On the other hand, PDLs such as text/plain never has orientation and PCL NEED NOT have orientation, in which case, "orientation-requested" takes affect.

1297  
1298  
1299  
1300

- 9. **PDL Init File data** - a file that the Printer uses to initialize the PDL Interpreter before it starts interpreting each document in a Job. See description of "pdl-init-file" Job Template attribute in [prod-print2] Section 5.8. It is immaterial how this file is specified, whether it be by a queue override, job object attribute or printer default – the precedence of the contents of this file is at this level.

1301  
1302  
1303  
1304  
1305  
1306  
1307  
1308  
1309

- 10. **printer default** - a Printer "xxx-default" attribute that is applied by the Printer provided that none of the higher levels have supplied a value. The Printer implementation MUST supply values for all of the Printer's "xxx-default" attributes that reflect the out-of-the-box action by the output device. For example, if the output device will use media from the large-capacity input tray if not directed otherwise, the implementation MUST supply the Printer's "media-default" attribute with the 'large-capacity' keyword value without requiring the administrator to configure that value. The implementation MUST allow the administrator to configure the Printer's "xxx-default" attributes to other values, if other value are supported by the implementation. Example: The administrator changes the Printer's "media-default" from 'large-capacity' to 'na-letter'.

1310  
1311  
1312

Note: Because of the requirement that the implementation supply pre-configured values for the Printer's "xxx-default" attributes, there is no need for a lower "hardware default" precedence level.

1313

## 6 Operation Attributes for the Job and Document Creation operations

1314  
1315  
1316

This section lists *all* the Operation attributes that have been defined in other IPP specifications that are used in Job Creation operations and extends their use to the Document Creation operations defined in the IPP specification. Operation attributes relate to the operation and do not depend on the printing capabilities of the Printer.

## 6.1 Operation Attributes supplied at the Job and Document Levels for Creation

Table 6 lists the Operation attributes that clients supply at the Job Level and/or the Document Level. The value of the “ipp-attribute-fidelity” operation attribute ([see section 6.2.1](#)) does *not* affect the Printer’s handling of the other operation attributes, only its handling of the [Job Template](#) and [Document Template](#) attributes (see section 7).

The “Level Supplied” column indicates whether the Operation attribute can be supplied at the Job Level (Print-Job, Print-URI, and Create-Job) and at the Document Level (Create-Document, Send-Document, and Send-URI) . The Conformance column indicates the conformance requirements for what the client supplies in a request and the Printer supports in a request. The Reference and Section columns list the IETF or IEEE-ISTO specification which defines the semantics of the attribute.

### Legend:

**[job-]** indicates an attribute that shouldn’t have had a “job-” prefix in its name in [RFC2911], so that the same attribute name could also be used for the Document object as a Document Description attribute. Note: For the PWG Semantic Model, the “job-” prefix is dropped.

“-” indicates that the Job or Document attribute is *not* defined.

\* these operation attributes are defined for *all* operations, not just Job Creation and Document Creation operations

\*\* the Printer **MUST** copy these operation attributes to the corresponding Job Description or Document Description attributes. See Table 9 for the corresponding Job and Document Description attributes.

**Table 6 - Operation Attributes supplied at the Job and Document Levels in Creation Requests**

Operation attribute name for Job and Document Creation requests	Attribute Syntax	Level Supplied		Conformance		Reference
		Job	Doc	Client supply	Printer support	
<b>attributes-charset</b> * **	charset	y	y	MUST	MUST	[RFC2911] §3.1.4
<b>attributes-natural-language</b> * **	naturalLanguage	y	y	MUST	MUST	[RFC2911] §3.1.4
<b>compression</b> **	type3 keyword	y <sup>10</sup>	y	MAY	MUST	[RFC2911] §3.2.1.1
<b>document-format</b> **	mimeMediaType	y <sup>113</sup>	y	MAY	MUST	[RFC2911] §3.2.1.1
<b>document-mandatory-attributes</b> **	<u>1setOf type2 keyword</u>	-	y	<u>MAY</u>	<u>MAY</u>	<u>[this spec] §6.2.3</u>
<b>document-message</b> * **	<u>text(127)</u>	-	y	<u>MAY</u>	<u>MAY</u>	<u>[this spec] §8.10</u>
<b>document-name</b> **	name(MAX)	y <sup>123</sup>	y	MAY	MUST	[RFC2911] §3.2.1.1
<b>document-natural-language</b> **	naturalLanguage	y <sup>133</sup>	y	MAY	MAY	[RFC2911] §3.2.1.1

<sup>10</sup> The “compression”, “document-format”, “document-name”, and “document-natural-language” MAY be supplied in the Create-Job Job Creation operation as an extension to [RFC2911] as specified in [override]. If supplied in any Job Creation operation, the Printer copies them to corresponding Job Description attributes for subsequent Job query. These supplied attributes become defaults for the Documents in the job and used if the client does not supply the corresponding operation attribute in the Send-Document or Send-URI Document Creation operation. **ISSUE 04: With the Document object, do we want to also defines Job Description attributes for: “compression”, “document-format”, “document-name”, “document-natural-language”, since they are really Document attributes?**

<sup>11</sup> See long footnote for the “compression” operation attribute in this table.

<sup>12</sup> See long footnote for the “compression” operation attribute in this table.

<sup>13</sup> See long footnote for the “compression” operation attribute in this table.

Operation attribute name for Job and Document Creation requests	Attribute Syntax	Level Supplied		Conformance		Reference

<b>requesting-user-name</b> *	name(MAX)	y	y	SHOULD	MUST	[RFC2911] §3.2.1.1
<b>version-number</b> *	X.Y	y	y	MUST	MUST	[RFC2911] §3.1.8

1336  
1337

\* and \*\*. See Legend at the beginning of the Table. - these attributes are defined for all operations, not just Job Creation and Document Creation operations

<sup>14</sup> According to [override] section 9.2.2, the "document-overrides" (collection) attribute MAY be supplied by the client in a Send-Document or Send-URI request as an Operation attribute to apply document overrides to this and/or subsequent documents in the job. The Printer MUST merge this operation attribute into the "document-overrides" Document Template attribute, if any. See the "page-overrides" Job Template attribute in Table 8 for the listing of the member attributes. However, with the introduction of the Document object, the "document-overrides" (collection) attribute SHOULD NOT be used (either as a Job Template attribute or an Operation attribute). Instead, the client simply supplies the Document Template attributes (see Table 8) for each Document Creation request (in a new Document Template attribute group) without needing a collection.

<sup>15</sup> The "document-uri" operation attribute MUST be supplied in the Print-URI Job Creation operation and the Send-URI Document Creation operation, MAY be supplied in a Validate-Document operation, and MUST NOT be supplied in other Job Creation operations.

<sup>16</sup> The "input-document-number" operation attribute sets the Document's "document-number" Document Description attribute (see section 8.1).

<sup>17</sup> According to [override] section 9.2.3, the "page-overrides" (collection) attribute MAY be supplied by the client in a Send-Document or Send-URI request as an Operation attribute to apply page overrides to this and/or subsequent documents in the job. The Printer MUST merge this operation attribute into the "page-overrides" Document Template attribute, if any. See the "page-overrides" Job Template attribute in Table 8 for the listing of the member attributes. However, with the introduction of the Document object, the "page-overrides" (collection) attribute SHOULD be more simply supplied as one of the Document Template attributes for this document only.

<sup>18</sup> The Printer copies the "printer-uri" operation attribute to the Job's "job-printer-uri" Job Description attribute.

## 6.2 Operation Attributes defined for use ~~with the in~~ Document Object Creation operations

This section defines extensions to existing Operation attributes in Job and Document Creation operations and new Operation attributes defined for use with the in Document Creation operations object.

### 6.2.1 ipp-attribute-fidelity (boolean) (RFC2911) sections 3.2.1 and 15)

This operation attribute indicates whether or not the Printer MUST honor all supplied Job Template and Document Template attributes in the Job Creation and Document Creation operation, respectively. The client OPTIONALLY MAY supply ~~ies~~ this attribute in Job Creation and Document Creation operations. The Printer ~~object~~ MUST support this attribute in Job Creation and Document Creation operations. The value 'true' indicates that total fidelity to client supplied Job Template and Document Template attributes and values is required, else the Printer ~~object~~ MUST reject the ~~Print-Job~~ request. The value 'false' indicates that a reasonable attempt to print the Job or Document object is acceptable and the Printer object MUST accept the ~~Print-Job~~ request. If not supplied, the Printer ~~object~~ assumes the value is 'false'. All Printer ~~objects~~ implementations MUST support both types of job processing. See [RFC2911] section 1545 for a full description of "ipp-attribute-fidelity" and its relationship to other attributes, especially the Printer object's "pdl-override-supported" attribute.

### 6.2.2 job-mandatory-attributes (1setOf type2 keyword)

This operation attribute identifies which Job Template ~~and Document Template~~ attributes the Printer MUST honor, in a Job Creation operation, otherwise, the Printer MUST reject the Job Creation operation for the Job or any subsequent Document Creation operations for this Job. The client MAY supply this attribute in Job Creation operations. The Printer MUST support this attribute in Job Creation operations. The Printer MUST ignore this attribute if the client supplies the "ipp-attribute-fidelity" operation attribute (see section 6.2.1) ~~is supplied~~ with a 'true' value, since ~~that a 'true' value~~ indicates that the Printer MUST honor all supplied Job Template and Document Template attributes.

The values of the "job-mandatory-attributes" attribute are the keyword attribute names that identify Job Template attributes, for example, 'job-hold-until', 'job-finishings' (see section 7.1.4), 'copies' and 'media'. In order to identify a member attribute of a collection attribute, the keyword names of both the collection attribute and the member attribute are given separated by a period (.) character. For example, to make the "media" attribute of the "cover-front" collection attribute mandatory, supply the keyword value: 'cover-front.media'.

### 6.2.3 document-mandatory-attributes (1setOf type2 keyword)

This operation attribute identifies which Document Template attributes the Printer MUST honor in a Document Creation operation, otherwise, the Printer MUST reject the operation. The client MAY supply this attribute in Document Creation operations. The Printer MUST support this attribute in Document Creation operations. The Printer MUST ignore this attribute if the client supplies the "ipp-attribute-fidelity" operation attribute (see section 6.2.1) with a 'true' value, since a 'true' value indicates that the Printer MUST honor all supplied Job Template attributes and Document Template attributes.

The values of the "document-mandatory-attributes" attribute are the keyword attribute names that identify Document Template attributes, for example, 'copies' and 'media'. In order to identify a member attribute of a collection attribute, the keyword names of both the collection attribute and the member attribute are given separated by a period (.) character. For example, to make the "media" attribute of the "cover-front" collection attribute mandatory, supply the keyword value: 'cover-front.media'.

~~ISSUE 09: Shouldn't we have both a "job-mandatory-attributes" and a "document-management-attributes" operation attribute, one for use in Job Creation operations and the other for use in Document Creation operations?~~

1380 **6.3 Operation Attributes returned in Job and Document Creation responses**

1381 Table 7 lists the Operation attributes that Printers return in Job Creation operation *responses*: Print-Job, Print-URI,  
 1382 and Create-Job and in Document Creation operation *responses*: Send-Document and Send-URI. The column  
 1383 labeled “Conformance” indicates the conformance for what the Printer returns and what the Printer supports. The  
 1384 Reference and Section columns list the IETF or IEEE-ISTO specification which defines the semantics of the attribute.

1385 **Table 7 - Operation attributes returned in Job and Document Creation operation responses**

Operation attribute name	Attribute Syntax Values	Conformance		References
		Printer return	Printer support	
attributes-charset *	charset	MUST	MUST	[RFC2911] §3.1.4
	‘utf-8’	MAY	MUST	[RFC2911] §4.1.7
	‘us-ascii’	MAY	MAY	[RFC2911] §4.1.7
	‘iso-8859-1’	MAY	MAY	[RFC2911] §4.1.7
	‘iso-10646-ucs-2’	MAY	MAY	[RFC2911] §4.1.7
attributes-natural-language *	naturalLanguage	MUST	MUST	[RFC2911] §3.1.4
	‘en-US’	MAY	MAY	[RFC2911] §4.1.8
detailed-status-message *	text	MAY	MAY	[RFC2911] §3.1.6.3
document-access-error	text	MAY	MAY	[RFC2911] §3.1.6.4
document-id-uri	uri	MUST <sup>2</sup> <del>ISSUE 10</del>	MUST <sup>2</sup> <del>ISSUE 11</del>	[this spec] §8.2
<b>document-number</b>	<b>integer(1:MAX)</b>	<b>MUST</b>	<b>MUST</b>	<b>[this spec] §8.1</b>
job-id	integer(1:MAX)	MUST	MUST	[RFC2911] §4.3.2
job-uri	uri	MUST	MUST	[RFC2911] §4.3.1
redirect-uri (uri) <sup>19</sup>	uri	MAY	MAY	[not-srv] §5.2
request-id *	integer(1:32767)	MUST	MUST	[RFC2911] §3.1.2
status-code *	integer(0:32767)	MUST	MUST	[RFC2911] §3.1.6.1
status-message *	text(255)	MAY	MAY	[RFC2911] §3.1.6.2
version-number *	integer(1:255), integer(0:255)	MUST	MUST	[RFC2911] §3.1.8

1386 \* - indicates attributes that are defined for *all* operations, not just Job Creation operations

1387

1388 **7 Job Template and Document Template attributes**

1389 Table 8 lists *all* of the Job Template attributes defined in other IPP specifications and lists their corresponding  
 1390 Document Template attributes defined in this IPP specification. The Job Template attributes can be supplied in the  
 1391 Job Creation operations: Print-Job, Print-URI, and Create-Job operations.

1392 A subset of these Job Template attributes (e.g., “document-format” and “media”, but not “job-priority”) are also  
 1393 defined to apply to Documents and are called Document Template attributes when supplied at the Document Level.  
 1394 Document Template attribute can be supplied in the Create-Document, Send-Document, and Send-URI operations.

<sup>19</sup> The Printer or Notification Server returns the “redirect-uri” operation attribute in order to redirect the Get-Notification operation to a Notification Server or back to the original Printer.

1395 These Document Template attributes can also be supplied as Document Overrides using the “document-overrides”  
1396 Job Template attribute (see [overrides]).

1397 A subset of the Document Template attributes that apply to pages (e.g., “media”, but not “document-format” or “job-  
1398 priority”) can also be supplied as Page Overrides using the “page-overrides” Job Template collection attribute (see  
1399 [override]) or as a Document Template attribute.

1400 According to [override], the “document-overrides” (collection) attribute MAY be supplied by the client in a Send-  
1401 Document or Send-URI request as an Operation attribute to apply document overrides to this and/or subsequent  
1402 documents in the job. See the “document-overrides” Job Template attribute in Table 8 for the listing of the member  
1403 attributes. However, with the introduction of the Document object, the “document-overrides” (collection) attribute  
1404 SHOULD NOT be used (either as a Job Template attribute or an Operation attribute). Instead, the client simply  
1405 supplies the Document Template attributes (see Table 8) for each Document Creation request (in a new Document  
1406 Template attribute group) without needing a collection. A Printer MAY support “document-overrides” as specified in  
1407 [override] for backward compatibility with clients that don’t support the Document object.

1408 The “document-overrides” attribute is also useful in combination with the “pages-per-subset” attribute (see  
1409 [overrides]) which divides up the Input Page stream concatenated across the Input Documents into separate Output  
1410 Documents. For example, making every 10 Input Pages be a separate Output Document but the client only wants to  
1411 staple the first Output Document.

1412 Similarly, according to [override], the “page-overrides” (collection) attribute MAY be supplied by the client in a Send-  
1413 Document or Send-URI request as an Operation attribute to apply page overrides to this and/or subsequent  
1414 documents in the job. See the “page-overrides” Job Template attribute in Table 8 for the listing of the member  
1415 attributes. However, with the introduction of the Document object, the “page-overrides” (collection) attribute  
1416 SHOULD be more simply supplied as one of the Document Template attributes for the document being created only.  
1417 However, a Printer MAY also support the “page-overrides” attribute as an operation attribute for backward  
1418 compatibility with clients that do not support the Document object.

1419 The “Defined for use” column indicates whether the client MAY supply and the Printer support the attribute at the  
1420 Job, Document, or Page Level with the following semantics:

Supplied	Description
J=y:	Job Level: The attributes MAY be supplied as Job Template attributes at the Job Level in a Job Creation request (Print-Job, Print-URI, Create-Job) in which case each Document inherits the Job Template attribute as a default which is used unless an attribute at the document level is also supplied. Note: The “multiple-document-handling” attribute controls whether extensive attributes, such as “finishing”, “copies”, affect the entire job as a whole (‘single-xxx’ values) or affect each document separately (‘separate-xxx’ values).
D=y:	Document Level: The attribute MAY be supplied at the Document Level as Document Template attributes in a Document Creation operation (Send-Document, Send-URI), in which case the supplied Document Templates override any Job Template attributes supplied at the Job Level and any “document-overrides” supplied at the Job or Document level.
P=y:	Page Level: The attribute MAY be supplied as a member of the (1) “page-ranges” Job Template attribute at the Job Level in a Job Creation operation or (2) “page-ranges” Document Template attribute at the Document Level to affect the specified range of pages.

1421 Job Template and Document Template attributes are OPTIONAL for a Printer to support and for a client to supply in  
1422 a Job Creation or Document Creation request or a Document Overrides or Page Overrides. If a Printer supports a  
1423 Job Template or Document Template attribute, then it MUST copy the supplied attribute to the Job or Document  
1424 object, respectively so that a client MAY query the attributes in subsequent Get-Job-Attributes/Get-Jobs and Get-  
1425 Document-Attributes/Get-Documents operations, respectively. The effect of Job Template Attributes supplied in Job  
1426 Creation requests are inherited by the Document objects, unless the Document Creation operation supplies the  
1427 attribute with a different value.  
1428

1429 If a Job Template collection attribute is supported (see [coll]), then there are conformance requirements for which  
 1430 member attributes MUST be supported and which member attributes a client MUST supply as indicated in the  
 1431 Conformance column for each collection member attribute in Table 8.

1432 **Table 8 - Job Template and Document Template attributes**

Job Template / Document Template attribute name	Attribute Syntax	Defined for use			Conformance		Reference
		J	D	P	Client supply	Printer support	
<b>copies</b>	integer(1:MAX)	y <sup>20</sup>	y	n	MAY	MAY	[RFC2911] §4.2.5

<b>feed-orientation</b>	type3 keyword	y	y	n	MAY	MAY	[prod-print2] §5.1

<sup>20</sup> The IPP "copies" attribute is an *extensive* attribute, so its effect when supplied at the job level is not always inherited by the documents in a multi-document job. Instead, its effect depends on the value of the "multiple-document-handling" Job Template attribute. The 'single-document' and 'single-document-new-sheet' values produce copies of the job as a whole with the multiple input documents concatenated into a single output document for each job copy. The 'separate-document-uncollated-copies' value produce N copies of the first input document followed by N copies of the second input document, etc. The 'separate-document-collated-copies' produce N successive job copies, each job copy consisting of 1 copy of the first document followed by 1 copy of the second document, etc.

<sup>21</sup> The client can supply the "document-overrides" operation attribute in the Send-Document or Send-URI operations (see [override]).

<sup>22</sup> The Printer MUST support "document-format", "document-name", "compression", "document-natural-language", and "page-ranges" with the "input-documents" member attribute, but not the "output-documents" member attribute.

media	type3 keyword   name(MAX)				MAY be neither or one of, but NOT both	MUST	[prod-print] §3.8.2
media-col	collection					MAY	[prod-print] §3.8.2
job-accounting-output-bin	type3 keyword   name(MAX)				MAY	MAY	[prod-print] §3.8.3
<b>job-accounting-user-id</b>	name(MAX)	y	n	n	MAY	MAY	[prod-print] §3.7
<b>job-copies</b>	integer(1:MAX)	y	n <sup>25</sup>	n	MAY	MAY	[this spec] §7.1.1

<sup>23</sup> The IPP “finishings” and “finishings-col” attributes are *extensive* attributes, so their effect when supplied at the **J** Job Level is not always inherited by the documents in a multi-document job. Instead, their effect depends on the value of the “multiple-document-handling” Job Template attribute. The ‘single-document’ and ‘single-document-new-sheet’ cause the finishing to be applied to each job copy as a whole. The ‘separate-documents-collated-copies’ and ‘separate-document-uncollated-copies’ values cause the finishing to be applied to each document.

<sup>24</sup> The effect of the IPP “force-front-side” and “insert-sheet” attributes when supplied at the job level of a multi-document job depends on the value of the “multiple-document-handling” Job Template attribute. For the ‘single-document’ and ‘single-document-new-sheet’ values, the pages are numbered as a single set from 1 to n for the job as a whole. For the ‘separate-documents-collated-copies’ and ‘separate-document-uncollated-copies’ values, the pages are numbered from 1 to n for each document separately.

<sup>25</sup> The “job-copies” Job Template attribute MUST NOT be supplied at the Document or Page Level. The “job-copies” Job Template attribute was introduced for use in clients or Printers that don’t support “multiple-document-handling” = ‘single-document’ or ‘single-document-new-sheet’.

<sup>26</sup> The “job-cover-back” Job Template attribute MUST NOT be supplied at the Document or Page Level. The “job-cover-back” Job Template attribute was introduced for use in clients or Printers that don’t support “multiple-document-handling” = ‘single-document’ or ‘single-document-new-sheet’.

<sup>27</sup> The “job-cover-front” Job Template attribute MUST NOT be supplied at the Document or Page Level. The “job-cover-front” Job Template attribute was introduced for use with clients or Printers that don’t support “multiple-document-handling” = ‘single-document’ or ‘single-document-new-sheet’.

<sup>28</sup> The “job-finishing” Job Template attribute MUST NOT be supplied at the Document or Page Level. The “job-finishings” Job Template attribute was introduced for use with clients or Printers that don’t support “multiple-document-handling” = ‘single-document’ or ‘single-document-new-sheet’.

<sup>29</sup> The “job-finishing-col” Job Template attribute MUST NOT be supplied at the Document or Page Level. The “job-finishings-col” Job Template attribute was introduced for use with clients or Printers that don’t support “multiple-document-handling” = ‘single-document’ or ‘single-document-new-sheet’.

<sup>30</sup> The “job-message-to-operator” Job Template attribute has no corresponding Document Template attribute. Instead, the user and operator communicate with each other using the same “document-message” operation attribute which the Printer copies to the “document-message” Document Description attribute.

<sup>31</sup> The effect of the IPP "page-overrides" Job Template attribute when supplied at the job level of a multi-document job depends on the value of the "multiple-document-handling" Job Template attribute. For the 'single-document' and 'single-document-new-sheet' values, the pages are numbered as a single set from 1 to n for the job as a whole. For the 'separate-documents-collated-copies' and 'separate-document-uncollated-copies' values, the pages are numbered from 1 to n for each document separately.

<sup>32</sup> The effect of the IPP "page-ranges" Job Template attribute when supplied at the job level of a multi-document job depends on the value of the "multiple-document-handling" Job Template attribute. For the 'single-document' and 'single-document-new-sheet' values, the pages are numbered as a single set from 1 to n for the job as a whole. For the 'separate-documents-collated-copies' and 'separate-document-uncollated-copies' values, the pages are numbered from 1 to n for each document separately.

<sup>33</sup> The IPP "pages-per-subset" Job Template attribute MUST be supplied at the Job Level and can only be used when the "multiple-document-handling" Job Template attribute is 'separate-documents-collated-copies' or 'separate-documents-uncollated-copies', since the purpose of the "pages-per-subset" attribute is to produce separate output documents for each subset. Otherwise, the Printer MUST ignore the "pages-per-subset" attribute.

1433

## 1434 7.1 Job Template attributes defined for use with the Document object

1435 This section defines additional Job Template attributes for use with the Document object.

### 1436 7.1.1 job-copies (integer(1:MAX)) Job Template attribute

1437 This attribute specifies the number of job copies, i.e., with all of the Document objects taken together. Its  
 1438 interpretation is independent of the value of the “multiple-document-handling” Job Template attribute. See the  
 1439 “copies” Job Template attribute defined in [RFC2911] section 4.2.5 which switches between job copies and  
 1440 document copies depending on the value of the “multiple-document-handling” Job Template attribute.

### 1441 7.1.2 job-cover-back (collection) Job Template attribute

1442 This attribute specifies the cover for the back of the job, i.e., with all of the Document objects taken together and is  
 1443 independent of the value of the “multiple-document-handling” Job Template attribute. The member attributes are the  
 1444 same as “cover-back” (see [prod-print] section 3.1). However, the “cover-back” Job Template attribute switches  
 1445 between a job back cover and a document back cover depending on the value of the “multiple-document-handling”  
 1446 Job Template attribute.

### 1447 7.1.3 job-cover-front (collection) Job Template attribute

1448 This attribute specifies the cover for the front of the job, i.e., with all of the Document objects taken together and is  
 1449 independent of the value of the “multiple-document-handling” Job Template attribute. The member attributes are the  
 1450 same as the “cover-front” Job Template attribute (see [prod-print] section 3.2). However, the “cover-front” Job  
 1451 Template attribute switches between a job front cover and a document front cover depending on the value of the  
 1452 “multiple-document-handling” Job Template attribute.

### 1453 7.1.4 job-finishings (1setOf type2 enum) Job Template attribute

1454 This attribute specifies the job finishings, i.e., with all of the Document objects taken together. Its interpretation is  
 1455 independent of the value of the “multiple-document-handling” Job Template attribute. See the “finishings” Job

1456 Template attribute defined in [RFC2911] section 4.2.6 which switches between job finishings and document  
 1457 finishings depending on the value of the “multiple-document-handling” Job Template attribute.

1458 **7.1.5 job-finishings-col (1setOf collection) Job Template attribute**

1459 This attribute specifies the job finishings collection, i.e., with all of the Document objects taken together. Its  
 1460 interpretation is independent of the value of the “multiple-document-handling” Job Template attribute. See the  
 1461 “finishings” Job Template attribute defined in [RFC2911] section 4.2.6 which switches between job finishings  
 1462 collection and document finishings collection depending on the value of the “multiple-document-handling” Job  
 1463 Template attribute.

1464 **8 Job Description and Document Description attributes**

1465 Table 9 lists all the Job Description defined in other IPP specifications and the corresponding Document Description  
 1466 attributes defined in this IPP specification. Job Description and Document Description attributes are Job object and  
 1467 Document object attributes, respectively, that are filled in by the Printer. Some Job/Document Description attribute  
 1468 values are supplied by the client in the Job/Document Creation operation using corresponding Operation attributes  
 1469 as flagged with “\*\*”.

1470 The column labeled “attribute syntax” indicates the attribute syntax (see [RFC2911] section 4.1). The Printer  
 1471 conformance is indicated along with the reference to the specification in which the attribute is defined. The  
 1472 conformance for Document Description attributes (if the Printer supports the Document object) is the same as the  
 1473 corresponding Job Description attributes.

1474 Note: There are no corresponding Page Range (or Page Override) Description attributes. The Page Range is not an  
 1475 object with a state and it cannot be queried.

1476 Legend:

- 1477 **[job-]** indicates an attribute that shouldn't have had a “job-” prefix in its name in [RFC2911], so that the same  
 1478 attribute **name** could also **apply to be used for** the Document object as a Document Description attribute.  
 1479 Note: For the PWG Semantic Model, the “job-” prefix is **proposed to be** dropped.
- 1480 “\_” indicates that the Job or Document attribute is *not* defined.
- 1481 \*\* indicates a Job and/or Document Description attribute that the client MAY supply the values for in a  
 1482 corresponding Operation attribute. See Table 6 for the corresponding operation attribute.
- 1483 (r/w) indicates that the Job Description or Document Description attribute is read/write, so that the client can  
 1484 change its value using the Set-Job-Attributes or Set-Documents-Attributes operation (see section 3.8).  
 1485 ISSUE 12: The “document-name” Document Description attribute is settable by Set-Documents-Attributes  
 1486 (like “job-name”)? But it's the only Document Description attribute that is marked (r/w)? Do we really need  
 1487 to be able to let a client change the “document-name” with the Set-Documents-Attributes operation?

1488 **Table 9 - Job and Document Description attributes**

IPP Job Description / Document Description attribute name	IPP Attribute Syntax	Job	Doc	Printer conformance	Reference
<b>attributes-charset</b> **	charset	y	y	MUST	[RFC2911] §4.3.19
<b>attributes-natural-language</b> **	naturalLanguage	y	y	MUST	[RFC2911] §4.3.20
<b>compression</b> **	type3 keyword	y	y	MUST	[RFC2911] §3.2.1.1
<b>current-page-order</b>	type2 keyword	y <sup>34</sup>	y	MAY	[prod-print] §4.1

<sup>34</sup> When documents in a multiple document job have the same page order, the Printer populates both the Job and Document “current-page-order” with the same value, so that clients that only know about the Job Description attribute

<b>job-originating-user-name</b>	name (MAX)	y	-	MUST	[RFC2911] §4.3.6

will get a value. When the page orders differ, the Printer doesn't populate the "current-page-order" Job Description attribute, but only the Document Description attribute of each Document.

<sup>35</sup> The "document-message" (text(127)) Document Description attribute has a corresponding "job-message-from-operator" (text(127)) Job Description attribute (see [RFC2911] section 4.3.16) which handles operator to user communication only and a "job-message-to-operator (text(MAX)) Job Template attribute (see [prod-print] section 3.10) for user to operator communication.

<sup>36</sup> The Document Description attribute that corresponds to the "job-id" Job Description attribute is the (new) "document-number" attribute.

<sup>37</sup> The "job-message-from-operator" Job Description attribute has no corresponding "document-message-from-operator" (text(127)) Document Description attribute. Instead, both the user and the operator use the "document-message" (text(127)) operation/Document Description attribute (see section 8.10) to communicate with each other.

<sup>38</sup> The Document Description attribute that corresponds to the "job-name" Job Description attribute is the (existing) "document-name" attribute defined in [RFC2911].

1489 “\*\*” See the description in the Legend before the table.  
1490

1491 Most of the existing “job-state” and “job-state-reasons” Job Description attribute values apply equally well to  
1492 individual documents in a multi-document job (with removal of the ‘job-’ prefix for those that apply to both Job and  
1493 Document). Furthermore, the job states are completely service-type neutral, so they can apply to scanning, faxing,  
1494 formatting processes as well. The job state reasons have a number of reasons that are print service specific, but  
1495 most can apply to other types of service as well. The reason for separating state from reasons, is so that the states  
1496 can be the fundamental states that most implementations have, while the state reasons can vary depending on the  
1497 sophistication of the system. The states are the ones that clients are most likely to base actions upon, and the state  
1498 reasons are more information, both for programs and people.

1499 The descriptions of the new “document-state” and “document-state-reasons” attributes are merged in with the  
1500 existing “job-state” and “job-state-reasons”. Such merging shows the parallelism in the description to aid  
1501 understanding and implementation and so that future maintenance will continue this strong parallelism. The “/”  
1502 character separates the words: Job from Document so that the same description can serve for both Job and  
1503 Document objects.

<sup>39</sup> The “job-printer-make-and-model” Job Description attribute MUST be supported if the “job-save-disposition” Job Template attribute is supported.

<sup>40</sup> The Document Description attribute that corresponds to the “job-state” Job Description attribute is the (new) “document-state” attribute.

<sup>41</sup> ~~The Document Description attribute that corresponds to the “job-state-message” Job Description attribute is the (new) “document-state-message” attribute. There is no Document Description attribute that corresponds to the “job-state-message”. Printers can use the “job-state-message” to describe any document level conditions.~~

<sup>42</sup> The Document Description attribute that corresponds to the “job-state-reasons” Job Description attribute is the (new) “document-state-reasons” attribute.

<sup>43</sup> ~~The Document Description attribute that corresponds to the “job-uri” (uri) Job Description attribute is the (new) “document-id-uri” (uri) attribute. The “job-uri” Job Description attribute does not have a corresponding Document Description attribute. However, the value is only a unique ID. The client cannot use the “document-id-uri” attribute URI value as a target of a Document object operation; T~~the “job-uri” has proved problematic enough as a target.

## 1504 8.1 document-number (integer(1:MAX)) Document Description attribute

1505 This **REQUIRED** Document Description attribute is the ordinal number of the document within the job which  
 1506 determines its order of being printed in a multi-document job. The Printer generates the values monotonically  
 1507 increasing from 1 for a job. However, the client MAY supply the value in the "input-document-number" operation  
 1508 attribute ([see section 3.1.1.1](#)).

## 1509 8.2 document-id-uri (uri) Document Description attribute

1510 This **REQUIRED** Document Description attribute is generated by the Printer as a unique URI to identify a Document  
 1511 object, in the same way that the "job-uri" (uri) Job Description attribute uniquely identifies a Job object. [Unlike the](#)  
 1512 ["job-uri" \(uri\) attribute, the client cannot supply this attribute as a target of an operation.](#)

1513 ~~ISSUE 16: Should the "document-id-uri" Document Description attribute be REQUIRED for the Printer to support in~~  
 1514 ~~any Document Creation operation, as a way of uniquely identifying a Document object across all Printers?~~

1515 ~~ISSUE 17: Should we REQUIRE the Printer to accept a "document-id-uri" as an alternative way for clients to specify~~  
 1516 ~~the target of Document object operations? I know that implementers have grumbled about the "job-uri" being~~  
 1517 ~~REQUIRED for the Printer to support and accept as the target.~~

## 1518 8.3 document-uri (uri) Document Description attribute

1519 This Document Description attribute is the URI that the client supplied in a Send-URI operation. The Printer **MUST**  
 1520 support this attribute if the Printer supports the Send-URI operation (see section 3.4).

## 1521 8.4 job-state (type1 enum) Job Description attribute

## 1522 8.5 document-state (type1 enum) Document Description attribute

1523 The **REQUIRED** "job-state" and the **REQUIRED** "document-state" attribute identify the current state of the job and  
 1524 document, respectively. Even though IPP defines seven values for job/document states (plus the out-of-band  
 1525 'unknown' value - see [RFC2911] section 4.1), implementations only need to support those states which are  
 1526 appropriate for the particular implementation. In other words, an IPP Printer object implementation supports only  
 1527 those job/document states implemented by the output device and available to the IPP Printer object implementation.

1528 Table 10 lists the "job-state" and "document-state" attribute values.

1529 **Table 10 - "job-state" and "document-state" attribute values**

Values	"job-state"	"document-state"
3 pending	y	y
4 pending-held	y	n/a
5 processing	y	y
6 processing-stopped	y	n/a
7 canceled	y	y
8 aborted	y	y
9 completed	y	y

1530

1531 The (JD) and (J) notation below indicates whether the keyword is defined for the “job-state” and “document-state”  
 1532 attributes or just the “job-state” attribute as indicated in Table 10. Standard enum values are:

Value	Symbolic Name and Description
'3'	<b>'pending'</b> (JD): The job is a candidate to start processing, but is not yet processing. The document has not started to be processed at all.
'4'	<b>'pending-held'</b> (J): The job is not a candidate for processing for any number of reasons but will return to the 'pending' state as soon as the reasons are no longer present. The job's "job-state-reason" attribute MUST indicate why the job is no longer a candidate for processing. The 'pending-held' state does not apply to the Document object's “document-state” attribute.
'5'	<b>'processing'</b> (JD): One or more of: <ol style="list-style-type: none"> <li>1. The job is using, or is attempting to use, one or more purely software processes that are analyzing, creating, or interpreting a PDL, etc.,</li> <li>2. The job is using, or is attempting to use, one or more hardware devices that are interpreting a PDL, making marks on a medium, and/or performing finishing, such as stapling, etc.,</li> <li>3. The Printer object has made the job ready for printing, but the output device is not yet printing it, either because the job hasn't reached the output device or because the job is queued in the output device or some other spooler, awaiting the output device to print it.</li> </ol>

When the job is in the 'processing' state, the entire job/document state includes the detailed status represented in the Printer object's "printer-state", "printer-state-reasons", and "printer-state-message" attributes.

On the other hand, the 'processing' state for the Document indicates that the Document has begun to be processed. Even if the job stops being processed, the Document remains in the 'processing' state until it moves to one of the three terminal states.

Implementations MAY, though they NEED NOT, include additional values in the job's/document's "job-state-reasons"/"document-state-reasons" attribute to indicate the progress of the job/document, such as adding the 'job-printing'/'printing' value to indicate when the output device is actually making marks on paper and/or the 'processing-to-stop-point' value to indicate that the Printer is in the process of canceling or aborting the job/document. Most implementations won't bother with this nuance.

'6' **'processing-stopped'** (J): The job has stopped while processing for any number of reasons and will return to the 'processing' state as soon as the reasons are no longer present.

The job's "job-state-reason" attribute MAY indicate why the job has stopped processing. For example, if the output device is stopped, the 'printer-stopped' value MAY be included in the job's "job-state-reasons" attribute.

Note: When an output device is stopped, the device usually indicates its condition in human readable form locally at the device. A client can obtain more complete device status remotely by querying the Printer object's "printer-state", "printer-state-reasons" and "printer-state-message" attributes.

The 'processing-stopped' state does not apply to the Document object's “document-state” attribute.

'7' **'canceled'** (JD): The job/document has been canceled by a Cancel-Job/Cancel-Document operation and the Printer object has completed canceling the job/document and all

Value	Symbolic Name and Description
	job/document status attributes have reached their final values for the job/document. While the Printer object is canceling the job/document, the job/document remains in its current state, but the job's/document's "job-state-reasons"/"document-state-reasons" attribute SHOULD contain the 'processing-to-stop-point' value and one of the 'canceled-by-user', 'canceled-by-operator', or 'canceled-at-device' value. When the job/document moves to the 'canceled' state, the 'processing-to-stop-point' value, if present, MUST be removed, but the 'canceled-by-xxx', if present, MUST remain.
'8'	<b>'aborted'</b> (JD): The job/document has been aborted by the system, usually while the job/document was in the 'processing' or 'processing-stopped' state and the Printer has completed aborting the job/document and all job/document status attributes have reached their final values for the job/document. While the Printer object is aborting the job/document, the job/document remains in its current state, but the job's/document's "job-state-reasons"/"document-state-reasons" attribute SHOULD contain the 'processing-to-stop-point' and 'aborted-by-system' values. When the job/document moves to the 'aborted' state, the 'processing-to-stop-point' value, if present, MUST be removed, but the 'aborted-by-system' value, if present, MUST remain.
'9'	<b>'completed'</b> (JD): The job/document has completed successfully or with warnings or errors after processing and all of the job/document media sheets have been successfully stacked in the appropriate output bin(s) and all job/document status attributes have reached their final values for the job/document. The job's/document's "job-state-reasons"/"document-state-reasons" attribute SHOULD contain one of: 'completed-successfully', 'completed-with-warnings', or 'completed-with-errors' values.

1533 The final value for this attribute MUST be one of: 'completed', 'canceled', or 'aborted' before the Printer removes the  
 1534 job/document altogether. The length of time that jobs/document remain in the 'canceled', 'aborted', and 'completed'  
 1535 states depends on implementation.

1536 Jobs/documents reach one of the three terminal states: 'completed', 'canceled', or 'aborted', after the jobs/documents  
 1537 have completed all activity, including stacking output media, after the jobs/documents have completed all activity,  
 1538 and all job/document status attributes have reached their final values for the job/document.

### 1539 8.5.1 The "job-state" Job Description attribute and the Job Life Cycle

1540 The "job-state" attribute is one of the most important Job Description attributes. Figure 1 shows the values of the  
 1541 "job-state" attribute and the Job object life cycle as affected by actions on the Job, Printer, and job processing.

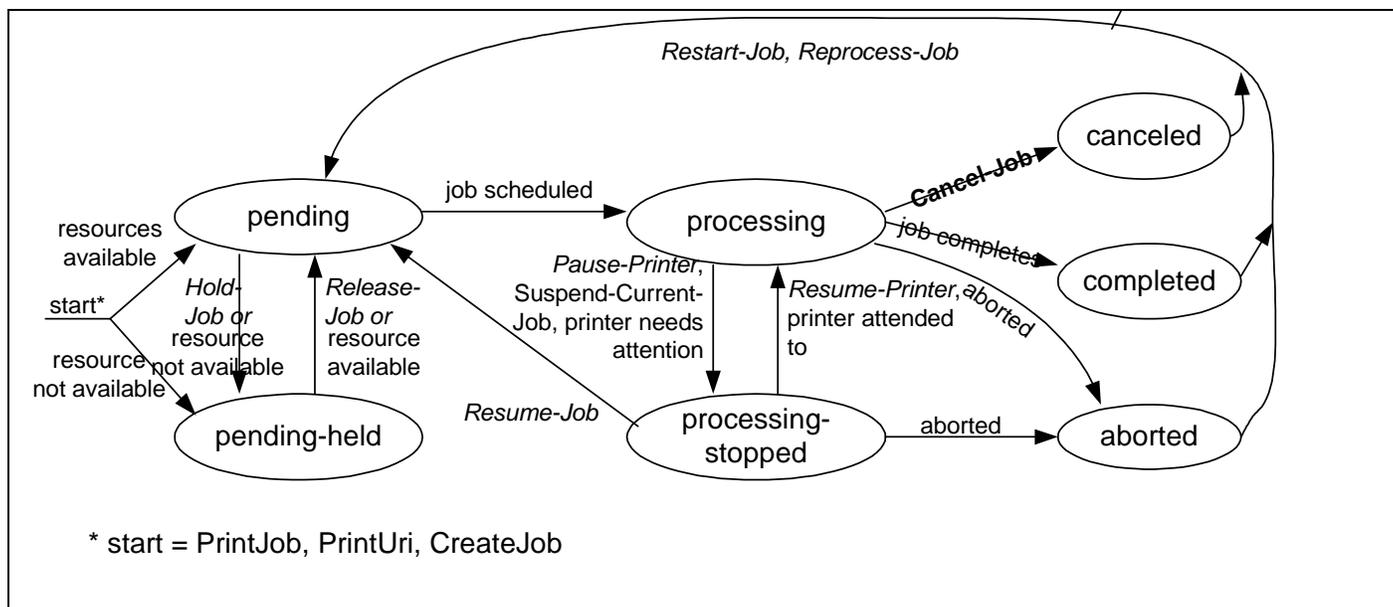

Figure 1 - The "job-state" Job Description attribute and the Job object life cycle

Normally a job progresses from left to right. Other state transitions are unlikely, but are not forbidden. Not shown are the transitions to the 'canceled' state from the 'pending', 'pending-held', and 'processing-stopped' states.

### 8.5.2 The "document-state" Document Description attribute and the Document object life Cycle

The "document-state" attribute is one of the most important Document Description attributes. Figure 2 shows the values of the "document-state" attribute and the Document object life cycle as affected by actions on the Job, Document, Printer, and job processing. Documents are not active objects and their life cycle is closely tied to the lifecycle of a Job<sup>44</sup>. Documents basically have three states. The first is waiting to be processed by a Job (i.e. pending). The second state is from the time the Job first starts processing the Document (i.e., processing) and until it reaches one of its terminal states. The third state for a Document is one of its terminal states (i.e., completed, canceled, or aborted).

<sup>44</sup> The Document object is not really a sub-job. If the Document object were its own independent active object, i.e., were a sub-job, then the Document state would affect the job state and there would be complex and debatable roll-up rules for how the various "document-state" values of all of the Job's document are rolled up to give a single value for the Job's "job-state" attribute. Instead, the Job state reflects the overall processing of the job and is the same whether or not the Document object is supported.

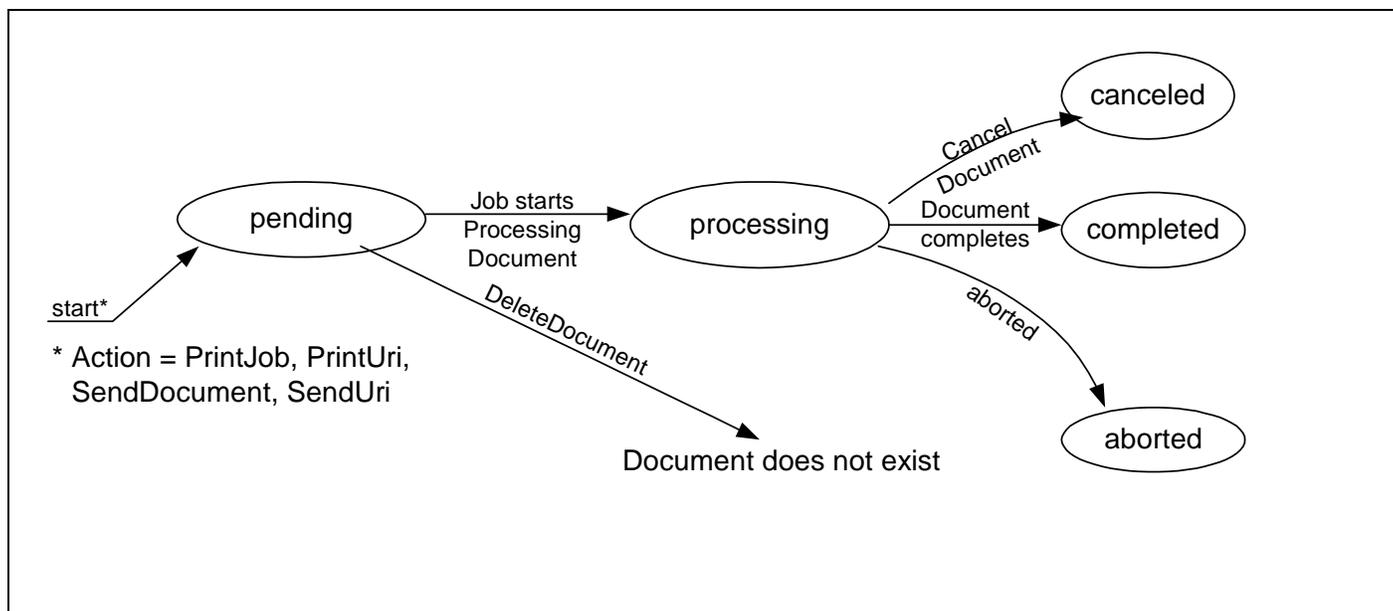

Figure 2 - The "document-state" Document Description attribute and the Document object life Cycle

A Document object has a much simpler life cycle than a Job object. A Document always progresses from left to right in the state diagram. No other state transitions are defined.

### 8.5.3 Forwarding Servers

As with all other IPP attributes, if the implementation can not determine the correct value for this attribute, it SHOULD respond with the out-of-band value 'unknown' (see [RFC2911] Section 4.1) rather than try to guess at some possibly incorrect value and give the end user the wrong impression about the state of the Job/Document object. For example, if the implementation is just a gateway into some printing system from which it can normally get status, but temporarily is unable, then the implementation should return the 'unknown' value. However, if the implementation is a gateway to a printing system that never provides detailed status about the print job/document, the implementation MAY set the IPP Job/Document object's state to 'completed', provided that it also sets the 'queued-in-device' value in the job's/document's "job-state-reasons"/"document-state-reasons" attribute (see "job-state-reasons"/"document-state-reasons" attribute below).

### 8.5.4 Partitioning of Job/Document States

This section partitions the job/document states into phases: Job/Document Not Completed, Job/Document Retention, Job/Document History, and Job/Document Removal. This section also explains the 'job-restartable' value of the "job-state-reasons" Job Description attribute for use with the Restart-Job operation.

**Job/Document Not Completed:** When a job is in the 'pending', 'pending-held', 'processing', or 'processing-stopped' states, the job is not completed. When a Document is in the 'pending' or 'processing' state, it is not completed.

**Job Retention:** When a job enters one of the three terminal job states: 'completed', 'canceled', or 'aborted', the IPP Printer object MAY "retain" the job in a restartable condition for an implementation-defined time period. This time period MAY be zero seconds and MAY depend on the terminal job state. This phase is called Job Retention. While in the Job Retention phase, the job's document data is retained and a client may restart the job using the Restart-Job operation. If the Printer supports the Restart-Job operation, then it SHOULD indicate that the job is restartable by adding the 'job-restartable' value to the job's "job-state-reasons" attribute (see Section 8.6) during the Job Retention phase. If the Printer supports the Document object, then the Get-Document-Attributes and Get-Documents operations MUST be supported while the job is in the Job Retention phase.

1585 **Job History:** After the Job Retention phase expires for a job, the Printer object deletes the document data for the  
 1586 job and the job becomes part of the Job History. The Printer object MAY also delete any number of the job and  
 1587 document attributes. Since the job is no longer restartable, the Printer object MUST remove the 'job-restartable'  
 1588 value from the job's "job-state-reasons" attribute, if present. If the implementation supports the Document object, it  
 1589 SHOULD retain at least the "document-state" and "document-state-reasons" attributes on the Document object  
 1590 during the Job History phase which can be queried using the Get-Document-Attributes and Get-Documents  
 1591 operations.

1592 **Job Removal:** After the job has remained in the Job History for an implementation-defined time, such as when the  
 1593 number of jobs exceeds a fixed number or after a fixed time period (which MAY be zero seconds), the IPP Printer  
 1594 removes the Job and Document objects from the system.

1595 Using the Get-Jobs/Get-Documents operation and supplying the 'not-completed' value for the "which-jobs" operation  
 1596 attribute, a client is requesting jobs/documents in the Job/Document Not Completed phase. Using the Get-Jobs/Get-  
 1597 Documents operation and supplying the 'completed' value for the "which-jobs" operation attribute, a client is  
 1598 requesting jobs/documents in the Job Retention and Job History phases. Using the Get-Job-Attributes/Get-  
 1599 Document-Attributes operation, a client is requesting a job/documents in any phase except Job Removal. After Job  
 1600 Removal, the Get-Job-Attributes/Get-Documents-Attributes and Get-Jobs/Get-Documents operations no longer are  
 1601 capable of returning any information about a job/document.

1602 NOTE: The semantics of this attribute or the set of valid values may be different for different document formats.

1603 **8.6 job-state-reasons (1setOf type2 keyword) Job Description attribute**

1604 **8.7 document-state-reasons (1setOf type2 keyword) Document Description attribute**

1605 The REQUIRED "job-state-reasons" and the REQUIRED "document-state-reasons" attributes provide additional  
 1606 information about the job's and each document's current state, i.e., information that augments the value of the job's  
 1607 "job-state" attribute and each Document's "document-state" attribute, respectively. The Printer SHOULD support the  
 1608 same values for both the "job-state-reasons" and the "document-state-reasons" attribute for those attributes that are  
 1609 defined for both as indicated in the "Job" and "Doc" columns in Table 11.

1610 These values MAY be used with any job or document state or states for which the reason makes sense. Some of  
 1611 these value definitions indicate conformance requirements; the rest are OPTIONAL. Furthermore, when  
 1612 implemented, the Printer MUST return these values when the reason applies and MUST NOT return them when the  
 1613 reason no longer applies whether the value of the Job's "job-state" attribute or the Document's "document-state"  
 1614 attribute changed or not. When the Job or Document does not have any reasons for being in its current state, the  
 1615 value of the Job's "job-state-reasons" attribute or Document's "document-state-reasons" attribute MUST be 'none'.

1616 Some of the Job's "job-state-reasons" values affect job scheduling, such as 'resources-are-not-ready' and 'job-hold-  
 1617 until-specified'. However, "document-state-reasons" values MUST NOT affect job scheduling, since Document  
 1618 objects are passive objects operated on by the containing Job object.

1619 Note: While values cannot be added to the "job-state" or "document-state" attributes without impacting deployed  
 1620 clients that take actions upon receiving "job-state" or "document-state" values, it is the intent that additional "job-  
 1621 state-reasons" and "document-state-reasons" values can be defined and registered without impacting such deployed  
 1622 clients. In other words, the "job-state-reasons" and the "document-state-reasons" attributes are intended to be  
 1623 extensible.

1624 Table 11 lists the ~~The following~~ standard keyword values are defined for the "job-state-reasons" and/or "document-  
 1625 state-reasons" attributes defined in this and other IPP specifications as indicated in the References column as shown  
 1626 in Table 9. In Table 11 the keywords are listed in alphabetic order (observing the "[job-]" prefix), while in their  
 1627 descriptions following Table 11, they are listed in the most likely order of occurrence to help understanding.

1628 When the Document object is supported, the Printer implementation SHOULD still support the corresponding Job  
 1629 level "job-state-reasons", so that clients that do not support the Document object will receive the same information.  
 1630 Also it is usually more convenient for the client to obtain just the Job level status. However, the client SHOULD  
 1631 query both Job and Document attributes and convert them to some canonical form for display to the user, so that all  
 1632 Jobs and their Documents are displayed in a uniform manner, no matter from which clients they were submitted.

1633 **Notation:**

1634 **[job-]** indicates a state reason keyword value that has the 'job-' prefix when it is a value of the "job-state-reasons"  
 1635 attribute, but does not have the 'job-' prefix when it is a value of the "document-state-reasons" attribute<sup>45</sup>.

1636 For purposes of sorting in Table 11, the "[job-]" prefix is observed, since this is an IPP specification.

1637 "-" indicates that the Job or Document value is *not* defined.

1638

**Table 11 - "job-state-reasons" and "document-state-reasons" attribute values**

IPP Job Description / Document Description attribute name	IPP Attribute Syntax plus Values	Job	Doc	Printer conformance	Reference
<b>job-state-reasons</b>	1setOf type2 keyword	y	- <sup>46</sup>	MUST	[RFC2911] §4.3.8
<b>document-state-reasons</b>	1setOf type2 keyword	-	y	MUST	[this spec] §8.7
	aborted-by-system	y	y	MAY	[RFC2911] §4.3.8
	compression-error	y	y	MAY	[RFC2911] §4.3.8
	document-access-error	y	y	MAY	[RFC2911] §4.3.8
	document-format-error	y	y	MAY	[RFC2911] §4.3.8
	[job-] canceled-at-device	y	y	MAY	[RFC2911] §4.3.8
	[job-] canceled-by-operator	y	y	MAY	[RFC2911] §4.3.8
	[job-] canceled-by-user	y	y	MAY	[RFC2911] §4.3.8
	[job-] completed-successfully	y	y	MAY	[RFC2911] §4.3.8
	[job-] completed-with-errors	y	y	MAY	[RFC2911] §4.3.8
	[job-] completed-with-warnings	y	y	MAY	[RFC2911] §4.3.8
	job-data-insufficient	y	-	MAY	[RFC2911] §4.3.8
	job-hold-until-specified	y	-	MAY	[RFC2911] §4.3.8
	[job-] incoming	y	y	MAY	[RFC2911] §4.3.8
	[job-] interpreting	y	y	MAY	[RFC2911] §4.3.8

1639  
1640  
1641  
1642  
1643

For ease of understanding, the following value descriptions are presented in the order in which the reasons are likely to occur (if implemented), starting with the 'none' value. Note: The order is improved over that in [RFC2911]. The (JD), (J), and (D) notation is identical to the "Job" and "Doc" columns in Table 11 indicating whether the keyword is defined for the "job-state-reasons" and/or "document-state-reasons" attributes:

1644  
1645  
1646  
1647

**'none' (JD):** There are no reasons for the job's or document's current state. This state reason is semantically equivalent to "job-state-reasons" or "document-state-reasons" attribute without any value and MUST be used when there is no other value, since the 1setOf attribute syntax requires at least one value.

1648  
1649  
1650  
1651

**'job-hold-until-specified' (J):** The value of the job's "job-hold-until" attribute was specified with a time period that is still in the future. The job MUST NOT be a candidate for processing until this reason is removed and there are no other reasons to hold the job. This value SHOULD be supported if the "job-hold-until" Job Template attribute is supported.

1652  
1653  
1654

**'job-password-wait' (J):** The Job is currently being held until the correct password is entered at the device. If the "job-password" (octetString(255)) Operation attribute (See [prod-print2] section 4.1) is supported, this value MUST be supported.

1655  
1656  
1657

**'proof-print-wait' (J):** The job is currently being held until the operator verifies the output of the proof print and performs a Release-Job operation. If the "proof-print" (collection) Job Template attribute (See [prod-print2] section 5.9) is supported, this value MUST be supported.

1658  
1659  
1660  
1661  
1662  
1663  
1664  
1665

**'resources-are-not-supported' (JD):** At least one of the resources needed by the job/document, such as media, fonts, resource objects, etc., is not supported on any of the physical printers for which the job/document is a candidate. This condition MAY be detected when the job/document is accepted, or subsequently while the job/document is pending or processing, depending on implementation. The job/document may (1) remain in its current state, (2) be moved to the 'pending-held' state, depending on implementation and/or job scheduling policy, or (3) scheduled normally, but the Printer is put into the 'stopped' state when the job/document is attempted to be processed on the Printer. This value is intended for use with an implementation that supports the "user-defined-values-

- 1666 supported" Printer attribute (see [prod-print] section 6.1) which allows a job to be accepted with an  
1667 unsupported 'name' value.
- 1668 **'resources-are-not-ready' (JD):** At least one of the resources needed by the job/document, such as media,  
1669 fonts, resource objects, etc., is not ready on any of the physical printer's for which the job/document  
1670 is a candidate. This condition MAY be detected when the job/document is accepted, or  
1671 subsequently while the job/document is pending or processing, depending on implementation. The  
1672 job/document may remain in its current state or be moved to the 'pending-held' state, depending on  
1673 implementation and/or job/document scheduling policy.
- 1674 **'[job-]incoming' (JD):** Either (1) the Printer has accepted the Create-Job operation and is expecting  
1675 additional Send-Document and/or Send-URI operations or (2) the Printer is retrieving/accepting  
1676 document data as a result of a Print-Job, Print-URI, Send-Document or Send-URI operation.
- 1677 **'[job-]spooling' (JD):** Same as 'job-incoming' with the specialization that the Printer is spooling the  
1678 Job/Document data before processing it. This value corresponds to the 'spool' or 'automatic' value of  
1679 the "job-spooling-supported" Printer Description attribute.
- 1680 **'[job-]streaming' (JD):** Same as 'job-incoming' with the specialization that the Printer is processing the  
1681 Job/Document data as it is being received (that is, the document is not being spooled, but rather is  
1682 being processed in chunks by the output device and is being imaged during reception). This value  
1683 corresponds to the 'stream' or 'automatic' value of the "job-spooling-supported" Printer Description  
1684 attribute.
- 1685 **'job-data-insufficient' (J):** The Create-Job operation has been accepted by the Printer, but the Printer is  
1686 expecting additional document data before it can move the job into the 'processing' state. If a Printer  
1687 starts processing before it has received all data, the Printer removes the 'job-data-insufficient'  
1688 reason, but the 'job-incoming' remains. If a Printer starts processing after it has received all data, the  
1689 Printer removes the 'job-data-insufficient' reason and the 'job-incoming' at the same time.
- 1690 **'unsupported-compression' (JD):** The job/document was aborted by the system because the Printer  
1691 determined while attempting to decompress the document-data's that the compression is actually not  
1692 among those supported by the Printer. This value MUST be supported, since "compressions is a  
1693 REQUIRED operation attribute.
- 1694 **'compression-error' (JD):** The job/document was aborted by the system because the Printer encountered  
1695 an error in the document-data while decompressing it. If the Printer posts this reason, the document-  
1696 data has already passed any tests that would have led to the 'unsupported-compression' job-state-  
1697 reason/document-state-reason.
- 1698 **'document-access-error' (JD):** After accepting a Print-URI or Send-URI request, the Printer could not  
1699 access one or more documents passed by reference. This reason is intended to cover any file  
1700 access problem, including file does not exist and access denied because of an access control  
1701 problem. The Printer MAY also indicate the document access error using the "job-document-access-  
1702 errors" Job Description attribute (see the description of "job-document-access-errors" above).  
1703 Whether the Printer aborts the job/document and moves the job/document to the 'aborted' job state  
1704 or prints all documents that are accessible and moves the job/document to the 'completed'  
1705 job/document state and adds the 'completed-with-errors' value in the job's "job-state-reasons" or  
1706 document's "document-state-reasons" attribute depends on implementation and/or site policy. This  
1707 value SHOULD be supported if the Print-URI or Send-URI operations are supported.
- 1708 **'unsupported-document-format' (JD):** The job/document was aborted by the system because the  
1709 document-data's document-format is not among those supported by the Printer. If the client  
1710 specifies the document-format as 'application/octet-stream', the printer MAY abort the job/document  
1711 and post this reason even though the format is a member of the "document-format-supported" printer  
1712 attribute, but not among the auto-sensed document-formats. This value MUST be supported, since  
1713 "document-format" is a REQUIRED operation attribute.
- 1714 **'document-format-error' (JD):** The job/document was aborted by the system because the Printer  
1715 encountered an error in the document-data while processing it. If the Printer posts this reason, the

- 1716 document-data has already passed any tests that would have led to the 'unsupported-document-  
1717 format' job-state-reason/document-state-reason.
- 1718 **'submission-interrupted' (JD):** The job or document was not completely submitted for some unforeseen  
1719 reason, such as: (1) the Printer has crashed before the job was closed by the client, (2) the Printer or  
1720 the document transfer method has crashed in some non-recoverable way before the document data  
1721 was entirely transferred to the Printer, (3) the client crashed or failed to close the job before the time-  
1722 out period. See the description of the "multiple-operation-time-out" Printer attribute in [RFC2911]  
1723 Section 4.4.31.
- 1724 **'[job-]outgoing' (JD):** The Printer is transmitting the job/document to the output device.
- 1725 **'job-scheduling' (J):** The printer is in the process of scheduling the processing for the Job.
- 1726 **'[job-]queued' (JD):** Job is in the 'processing' state, but more specifically, the Printer has queued the  
1727 Document data.
- 1728 **'[job-]transforming' (JD):** Job/document is in the 'processing' state, but more specifically, the Printer is  
1729 interpreting document data and producing another electronic representation.
- 1730 **'[job-]interpreting' (JD):** Job/document is in the 'processing' state, but more specifically, the Printer is  
1731 interpreting the document data.
- 1732 **'[job-]queued-for-marker' (JD):** Job/document is in any of the 'pending-held', 'pending', or 'processing'  
1733 states, but more specifically, the Printer has completed enough processing of the document to be  
1734 able to start marking and the job/document is waiting for the marker. Systems that require human  
1735 intervention to release jobs using the Release-Job operation, put the job into the 'pending-held' job  
1736 state. Systems that automatically select a job to use the marker put the job into the 'pending' job  
1737 state or keep the job in the 'processing' job state while waiting for the marker, depending on  
1738 implementation. All implementations put the job/document into (or back into) the 'processing' state  
1739 when marking does begin.
- 1740 **'[job-]printing' (JD):** The output device is marking media. This value is useful for Printers which spend a  
1741 great deal of time processing (1) when no marking is happening and then want to show that marking  
1742 is now happening or (2) when the job/document is in the process of being canceled or aborted while  
1743 the job/document remains in the 'processing' state, but the marking has not yet stopped so that  
1744 impression or sheet counts are still increasing for the job/document.
- 1745 **'printer-stopped-partly' (J):** The value of the Printer's "printer-state-reasons" attribute contains the value  
1746 'stopped-partly'.
- 1747 **'printer-stopped' (J):** The value of the Printer's "printer-state" attribute is 'stopped'.
- 1748 **'job-suspending' (J):** The printer is in the process of moving the Job from a processing condition to a  
1749 suspended condition where other jobs can be processed.
- 1750 **'job-suspended' (J):** The job has been suspended while processing using the Suspend-Current-Job  
1751 operation and other jobs can be processed on the Printer. The Job can be resumed using the  
1752 Resume-Job operation which removes this value. Note: Documents cannot be suspended and there  
1753 is no Suspend-Current-Documents operation.
- 1754 **'job-suspended-by-operator' (J):** The Job has been indefinitely suspended by the printer operator.
- 1755 **'job-suspended-by-user' (J):** The Job has been indefinitely suspended by the user.
- 1756 **'job-suspended-by-system' (J):** The Job has been indefinitely suspended by the Printer's system software  
1757 during normal processing of the job.
- 1758 **'job-resuming' (J):** The printer is in the process of moving the Job from a suspended condition to become a  
1759 candidate for processing.
- 1760 **'[job-]canceled-by-user' (JD):** The job/document was canceled by the owner of the job using the Cancel-  
1761 Job/Cancel-Documents request, i.e., by a user whose authenticated identity is the same as the value

- 1762 of the originating user that created the Job object, or by some other authorized end-user, such as a  
1763 member of the job owner's security group. This 'job-canceled' value SHOULD be supported. The  
1764 'canceled-by-user' value SHOULD be supported for the "document-state-reasons" attributes ~~if the for~~  
1765 ~~use with the~~ Cancel-Document ~~operation is supported~~.
- 1766 **'[job-]canceled-by-operator' (JD):** The job/document was canceled by the operator using the Cancel-  
1767 Job/Cancel-Document request, i.e., by a user who has been authenticated as having operator  
1768 privileges (whether local or remote). If the security policy is to allow anyone to cancel anyone's  
1769 job/document, then these values may be used when the job/document is canceled by other than the  
1770 owner of the job. For such a security policy, in effect, everyone is an operator as far as canceling  
1771 jobs/documents is concerned. These values SHOULD be supported if the implementation permits  
1772 canceling by other than the owner of the job.
- 1773 **'[job-]canceled-at-device' (JD):** The job/document was canceled by an unidentified local user, i.e., a user  
1774 at a console at the device. This value SHOULD be supported if the implementation supports  
1775 canceling jobs/documents at the console.
- 1776 **'aborted-by-system' (JD):** The job/document (1) is in the process of being aborted, (2) has been aborted by  
1777 the system and placed in the 'aborted' state, or (3) has been aborted by the system and placed in the  
1778 'pending-held' state, so that a user or operator can manually try the job/document again. This value  
1779 SHOULD be supported.
- 1780 **'processing-to-stop-point' (J):** The requester has issued a Cancel-Job/Cancel-Document operation or the  
1781 Printer object has aborted the job/document, but is still performing some actions on the job/document  
1782 until a specified stop point occurs or job/document termination/cleanup is completed.  
1783 If the implementation requires some measurable time to cancel the job/document in the 'processing'  
1784 or 'processing-stopped' job/document states, the Printer MUST use this value to indicate that the  
1785 Printer object is still performing some actions on the job/document while the job/document remains in  
1786 the 'processing' or 'processing-stopped' state. After all the job's/document's job/document  
1787 description attributes have stopped incrementing, the Printer object moves the job/document from  
1788 the 'processing' state to the 'canceled' or 'aborted' job/document states.
- 1789 **'service-off-line' (J):** The Printer is off-line and accepting no jobs. All 'pending' jobs are put into the  
1790 'pending-held' state. This situation could be true if the service's or document transform's input is  
1791 impaired or broken.
- 1792 **'[job-]warnings-detected' (JD):** If the Printer supports these values, the Printer MUST add the value to "job-  
1793 state-reasons" / "document-state-reasons" when it generates the first warning message. That is, a  
1794 single occurrence of this value is present in the "job-state-reasons" / "document-state-reasons" if the  
1795 Printer has generated one or more warnings.
- 1796 **'[job-]completed-successfully' (JD):** The job/document completed successfully. There were no warnings  
1797 or errors in printing. This value SHOULD be supported.
- 1798 **'[job-]completed-with-warnings' (JD):** The print part of the job/document completed with warnings  
1799 (whether or not there were save errors). This value SHOULD be supported if the implementation  
1800 detects warnings. [RFC2911]
- 1801 **'[job-]completed-with-errors' (JD):** The print part of the job/document completed with errors (and possibly  
1802 warnings too) (whether or not there were save errors). This value SHOULD be supported if the  
1803 implementation detects errors. [RFC2911]
- 1804 **'job-saving' (J):** The Printer is transmitting the Job to the save location. This is similar to the 'job-printing'  
1805 value.
- 1806 **'job-saved-successfully' (J):** The Printer saved the Job successfully.
- 1807 **'job-save-error' (J):** The Printer did not save the Job successfully (whether or not it was printed successfully,  
1808 printed with warnings, printed with errors, or not printed). The Printer MUST ensure that none of the  
1809 saved job is accessible, if it was unable to successfully save all of the job.

1810 **'job-restartable' (J)**: This job is retained (see the description of "job-state" above, specifically "Partitioning of  
 1811 Job States") and is currently able to be restarted using the Restart-Job operation (see [RFC2911]  
 1812 Section 3.3.7). If 'job-restartable' is a value of the job's "job-state-reasons" attribute, then the Printer  
 1813 MUST accept a Restart-Job operation for that job. This value SHOULD be supported if the Restart-  
 1814 Job operation is supported.

1815 **'queued-in-device' (JD)**: The job/document has been forwarded to a device or print system that is unable to  
 1816 send back status. The Printer sets the job's/document's "job-state" / "document-state" attribute to  
 1817 'completed' and adds the 'queued-in-device' value to the job's/document's "job-state-reasons" /  
 1818 "document-state-reasons" attribute to indicate that the Printer has no additional information about the  
 1819 job/document and never will have any better information. See the description of the "job-state" /  
 1820 "document-state" attribute above, specifically the portion on "Forwarding Servers".

1821 NOTE: The semantics of this attribute or the set of valid values may be different for different document formats.

1822 **8.8 job-state-message (text(MAX))** **Job Description attribute**

1823 **8.9 document-state-message (text(MAX))** **Document Description attribute**

1824 This **OPTIONAL** attribute specifies information about the "job-state"/"document-state" and "job-state-  
 1825 reasons"/"document-state-reasons" attributes in human readable text. If the Printer object supports this attribute, the  
 1826 Printer object MUST be able to generate this message in any of the natural languages identified by the Printer's  
 1827 "generated-natural-language-supported" attribute (see the "attributes-natural-language" operation attribute specified  
 1828 in [RFC2911] Section 3.1.4.1).

1829 The value SHOULD NOT contain additional information not contained in the values of the "job-state" and "job-states-  
 1830 reasons" attributes, such as interpreter error information. Otherwise, application programs might attempt to parse the  
 1831 (localized text). For such additional information such as interpreter errors for application program consumption or  
 1832 specific document access errors, new attributes with keyword values, needs to be developed and registered.

1833 **8.10 document-message (text(127))** **Document Description**

1834 **ISSUE 02**. Should the "document-message" Document Description attribute have a maximum of 127 octets, like the  
 1835 "job-message-from-operator" (text(127)) Job Description attribute in [RFC2911] section 4.3.16 or MAX (1023 octets)  
 1836 like "job-message-to-operator" (text(MAX)) Job Template attribute in IEEE-ISTO 5100.3 [prod-print] section 3.10?

1837 This OPTIONAL Document Description contains a message from the user to the operator or a message from the  
 1838 operator or administrator system administrator or "intelligent" process to indicate to the end user the reasons for  
 1839 modification or other management action taken on the Document. The Printer populates this Document Description  
 1840 attribute from the "document-message" (text(127) operation attribute value supplied by the client in any of the  
 1841 Document Creation operations (see section 3.1.1) or in a Cancel-Document or Cancel-Current-Document operations  
 1842 (see sections 3.9 or 3.10). In addition, the user and the operator can set the value of this Document Description  
 1843 attribute explicitly using the Set-Document-Attributes operation (see section 3.8).

1844 **8.11 document-printer-up-time (integer(1:MAX))** **Document Description**

1845 This REQUIRED Document Description attribute indicates the amount of time (in seconds) that the Printer  
 1846 implementation has been up and running. This attribute is an alias for the "printer-up-time" Printer Description  
 1847 attribute (see [RFC2911] section 4.4.29).

1848 A client MAY request this attribute in a Get-Document-Attributes or Get-Documents request and use the value  
 1849 returned in combination with other requested Event Time Job Description Attributes in order to display time attributes

1850 to a user. The difference between this attribute and the 'integer' value of a "time-at-xxx" attribute is the number of  
 1851 seconds ago that the "time-at-xxx" event occurred. A client can compute the wall-clock time at which the "time-at-  
 1852 xxx" event occurred by subtracting this difference from the client's wall-clock time.

1853 **ISSUE 03:** The following 4 Job Creation operation attributes have corresponding Job Description attributes, but  
 1854 there isn't a definition or an IANA Registration for any of these Job Description attributes: "ipp-attribute-fidelity", "job-  
 1855 mandatory-attributes", "job-password", and "job-password-encryption". OK to add Job Description attribute  
 1856 descriptions for each of them? That would correspond to the PWG Semantic Model where they are Job Description  
 1857 attributes.

1858 **ISSUE 04 repeat:** The following 4 Job Creation operation attributes have corresponding Job Description attributes,  
 1859 since they are really Document attributes: "compression", "document-format", "document-name", "document-natural-  
 1860 language"? OK to add Document Description attribute descriptions for each of them? That would correspond to the  
 1861 PWG Semantic Model where they are Document Description attributes.

1862 **ISSUE 05:** The Printer copies the following 11 Document Creation operation attributes to corresponding Document  
 1863 Description attributes, but there isn't a definition or an IANA Registration for any of these Document Description  
 1864 attributes: "attributes-charset", "attributes-natural-language", "compression", "document-format", "document-name",  
 1865 "document-natural-language", "impressions", "k-octets", "media-sheets", "job-printer-uri", and "last-document". OK to  
 1866 add operation attribute and Document Description attribute descriptions for each of them?

1867 **ISSUE 06:** The definitions of the following 16 remaining Document Description attributes are derived from the  
 1868 corresponding Job Description attributes that are not set by the client: "current-page-order", "date-time-at-  
 1869 completed", "date-time-at-creation", "date-time-at-processing", "detailed-status-message", "document-access-errors",  
 1870 "impressions-completed", "impressions-completed-current-copy", "k-octets-processed", "media-sheets-completed",  
 1871 "more-info", "sheet-completed-copy-number", "time-at-completed", "time-at-creation", "time-at-processing", and  
 1872 "warnings-count". OK to add Document Description attribute descriptions for each of them?

## 1873 9 Printer attributes

1874 This section lists *all* of the Printer attributes defined in other IPP documents. Printer attributes are divided into three  
 1875 disjoint groups:  
 1876

Job Template attributes (JT)	These Printer attributes are related directly to the "xxx" Job Template attributes that a client can supply in a Job Creation request as follows: 1. "xxx-supported" indicate the supported values 2. "xxx-default" indicate the values that will be used if the client and the PDL omit the attribute. 3. "xxx-ready" indicate the supported values that are available without human intervention, for those few attributes that require human intervention, such as "media" and possibly "finishing".
Printer Description attributes (PD)	These Printer attributes describe the Printer, such as "printer-name" and "printer-location". Some of them are "xxx-supported" and "xxx-default" for Operation attributes that the client can supply in a Job Creation request.
neither (-)	These Printer attributes describe supported and defaults for member attributes of collection Job Template attributes.

1877 In a Get-Printer-Attributes request, a client can request all of the Printer attributes in the Job Template (JT) or Printer  
 1878 Description (PD) groups by supplying the 'job-template' or 'printer-description' group name, respectively. The client  
 1879 can also request "all". The column labels are:  
 1880

1881 **"Attribute Syntax"** - indicates the attribute syntax (see [RFC2911] section 4.1). Many "xxx-default" and "xxx-  
 1882 supported" attributes have the 'collection' syntax which consists of a number of member attributes.

1883 These member attributes are not listed in this table when they are the same as the corresponding  
 1884 “xxx” attribute in Table 8. Only those few Printer attribute collection attributes that do not have a  
 1885 corresponding Job Template attributes show the member attributes in this table.

1886 “Grp” - indicates to which group the attribute belongs.

1887 “Printer Conf.” - indicates the IPP/1.1 Printer conformance requirements for supporting the attribute. Those  
 1888 attributes labeled as “MAY” may have conditional requirements that require their support, if the  
 1889 Printer supports a related attribute, operation, or feature. For example, all Job Template attributes  
 1890 are OPTIONAL for a Printer to support. However, if a Printer supports Job Template attribute “xxx”,  
 1891 then it MUST also support the corresponding “xxx-default” and “xxx-supported” attributes. Similarly,  
 1892 if Event Notification is supported, then some of the attributes indicated as “MAY” in this table become  
 1893 MUST.

1894 “Reference” - lists the IETF or IEEE-ISTO specification which defines the semantics of the attribute.

1895 **Table 12 - Printer attributes (Job Template and Printer Description)**

Printer attribute name (Job Template & Printer Description)	Attribute Syntax	Grp	Printer Conf.	Reference
<b>charset-configured</b>	charset	PD	MUST	[RFC2911] §4.4.17
<b>charset-supported</b>	1setOf charset	PD	MUST	[RFC2911] §4.4.18
<b>color-supported</b>	boolean	PD	MAY	[RFC2911] §4.4.26
<b>compression-supported</b>	type3 keyword	PD	MUST	[RFC2911] §4.4.32

1901

1902 This description is taken from [RFC2911] with additions from other IPP extension documents:

<sup>48</sup> The 'moving-to-paused' value MUST be supported if the Pause-Printer operation is supported and it takes significant time to move to paused.

<sup>49</sup> The 'paused' value MUST be supported if the Pause-Printer operation is supported.

1903 This REQUIRED Printer attribute supplies additional detail about the device's state. Some of these value  
1904 definitions indicate conformance requirements; the rest are OPTIONAL.

1905 Each keyword value MAY have a suffix to indicate its level of severity. The three levels are: report (least severe),  
1906 warning, and error (most severe).

1907 **'-report'**: This suffix indicates that the reason is a "report". An implementation may choose to omit some or  
1908 all reports. Some reports specify finer granularity about the printer state; others serve as a precursor  
1909 to a warning. A report MUST contain nothing that could affect the printed output.

1910 **'-warning'**: This suffix indicates that the reason is a "warning". An implementation may choose to omit some  
1911 or all warnings. Warnings serve as a precursor to an error. A warning MUST contain nothing that  
1912 prevents a job from completing, though in some cases the output may be of lower quality.

1913 **'-error'**: This suffix indicates that the reason is an "error". An implementation MUST include all errors. If this  
1914 attribute contains one or more errors, printer MUST be in the stopped state.

1915 If the implementation does not add any one of the three suffixes, all parties MUST assume that the reason is an  
1916 "error".

1917 If a Printer object controls more than one output device, each value of this attribute MAY apply to one or more of the  
1918 output devices. An error on one output device that does not stop the Printer object as a whole MAY appear as a  
1919 warning in the Printer's "printer-state-reasons" attribute. If the "printer-state" for such a Printer has a value of  
1920 'stopped', then there MUST be an error reason among the values in the "printer-state-reasons" attribute.

1921 The following standard keyword values are defined (in alphabetical order):

1922 **'other'**: The device has detected an error other than one listed in this document.

1923 **'none'**: There are not reasons. This state reason is semantically equivalent to "printer-state-reasons" without  
1924 any value and MUST be used, since the 1setOf attribute syntax requires at least one value.

1925 **'connecting-to-device'**: The Printer object has scheduled a job on the output device and is in the process of  
1926 connecting to a shared network output device (and might not be able to actually start printing the job  
1927 for an arbitrarily long time depending on the usage of the output device by other servers on the  
1928 network).

1929 **'cover-open'**: One or more covers on the device are open.

1930 **'deactivated'**: A client has issued a Deactivate-Printer operation for the Printer object (see [adm-ops]  
1931 section 3.4.1) and the Printer is in the process of becoming deactivated or has become deactivated.  
1932 The Printer MUST reject all requests except Activate-Printer, queries (Get-Printer-Attributes, Get-  
1933 Job-Attributes, Get-Jobs, etc.), Send-Document, and Send-URI (so that partial job submission can  
1934 be completed - see [adm-ops] section 3.1.1) and return the 'server-error-service-unavailable' status  
1935 code.

1936 **'developer-empty'**: The device is out of developer.

1937 **'developer-low'**: The device is low on developer.

1938 **'door-open'**: One or more doors on the device are open.

1939 **'fuser-over-temp'**: The fuser temperature is above normal.

1940 **'fuser-under-temp'**: The fuser temperature is below normal.

1941 **'hold-new-jobs'**: The operator has issued the Hold-New-Jobs operation (see [adm-ops] section 3.3.1) or  
1942 other means, but the output-device(s) are taking an appreciable time to stop. Later, when all output  
1943 has stopped, the "printer-state" becomes 'stopped', and the 'paused' value replaces the 'moving-to-  
1944 paused' value in the "printer-state-reasons" attribute. This value MUST be supported, if the Hold-

- 1945 New-Jobs operation is supported and the implementation takes significant time to pause a device in  
1946 certain circumstances.
- 1947 **'input-tray-missing'**: One or more input trays are not in the device.
- 1948 **'interlock-open'**: One or more interlock devices on the printer are unlocked.
- 1949 **'interpreter-resource-unavailable'**: An interpreter resource is unavailable (i.e. font, form)
- 1950 **'marker-supply-empty'**: The device is out of at least one marker supply. (e.g. toner, ink, ribbon)
- 1951 **'marker-supply-low'**: The device is low on at least one marker supply. (e.g. toner, ink, ribbon)
- 1952 **'marker-waste-almost-full'**: The device marker supply waste receptacle is almost full.
- 1953 **'marker-waste-full'**: The device marker supply waste receptacle is full.
- 1954 **'media-empty'**: At least one input tray is empty.
- 1955 **'media-jam'**: The device has a media jam.
- 1956 **'media-low'**: At least one input tray is low on media.
- 1957 **'media-needed'**: A tray has run out of media.
- 1958 **'moving-to-paused'**: Someone has paused the Printer object using the Pause-Printer operation (see  
1959 [RFC2911] section 3.2.7) or other means, but the device(s) are taking an appreciable time to stop.  
1960 Later, when all output has stopped, the "printer-state" becomes 'stopped', and the 'paused' value  
1961 replaces the 'moving-to-paused' value in the "printer-state-reasons" attribute. This value MUST be  
1962 supported, if the Pause-Printer operation is supported and the implementation takes significant time  
1963 to pause a device in certain circumstances.
- 1964 **'opc-life-over'**: The optical photo conductor is no longer functioning.
- 1965 **'opc-near-eol'**: The optical photo conductor is near end of life.
- 1966 **'output-area-almost-full'**: One or more output area is almost full (e.g. tray, stacker, collator).
- 1967 **'output-area-full'**: One or more output area is full. (e.g. tray, stacker, collator)
- 1968 **'output-tray-missing'**: One or more output trays are not in the device
- 1969 **'paused'**: Someone has paused the Printer object using the Pause-Printer operation (see [RFC2911] section  
1970 3.2.7) or other means and the Printer object's "printer-state" is 'stopped'. In this state, a Printer  
1971 MUST NOT produce printed output, but it MUST perform other operations requested by a client. If a  
1972 Printer had been printing a job when the Printer was paused, the Printer MUST resume printing that  
1973 job when the Printer is no longer paused and leave no evidence in the printed output of such a  
1974 pause. This value MUST be supported, if the Pause-Printer operation is supported.
- 1975 **'shutdown'**: Someone has removed a Printer object from service, and the device may be powered down or  
1976 physically removed. In this state, a Printer object MUST NOT produce printed output, and unless the  
1977 Printer object is realized by a print server that is still active, the Printer object MUST perform no other  
1978 operations requested by a client, including returning this value. If a Printer object had been printing a  
1979 job when it was shutdown, the Printer NEED NOT resume printing that job when the Printer is no  
1980 longer shutdown. If the Printer resumes printing such a job, it may leave evidence in the printed  
1981 output of such a shutdown, e.g. the part printed before the shutdown may be printed a second time  
1982 after the shutdown.
- 1983 **'spool-area-full'**: The limit of persistent storage allocated for spooling has been reached. The Printer is  
1984 temporarily unable to accept more jobs. The Printer will remove this value when it is able to accept  
1985 more jobs. This value SHOULD be used by a non-spooling Printer that only accepts one or a small  
1986 number jobs at a time or a spooling Printer that has filled the spool space.

- 2012 4. MAY support any of the Document Template attributes in Document Creation operations as indicated in  
 2013 section 7 and MUST NOT support them for contexts for where they are not defined as indicated in the Table  
 2014 9 with an "n".
- 2015 5. MUST support the Document Description attributes that section 8 REQUIRES a Printer to support.
- 2016 6. MUST support the Printer attributes that section 8.11 REQUIRES a Printer to support.
- 2017 7. MUST support the values of Printer Descriptions attribute that section 10 REQUIRES a Printer to support.

## 2018 11.2 Client conformance requirements

2019 In order to conform to this specification, a client:

- 2020 1. MUST meet the conformance requirements for clients specified in [RFC2911]
- 2021 2. MAY support any of the Document operations defined in section 3. ~~ISSUE 18: Or should the client be~~  
 2022 ~~REQUIRED to support some of the Document operations?~~
- 2023 3. MUST supply the operation attributes that section 6 REQUIRES a client to supply in operation requests.
- 2024 4. MUST supply any Document Template attributes in the format that section 7 REQUIRES a client to supply in  
 2025 Document Creation operations and MUST NOT support them for contexts for where they are not defined as  
 2026 indicated in the Table 9 with an "n".
- 2027 5. SHOULD support any of the Document Description attributes that section 8 REQUIRES a Printer to support.
- 2028 6. MAY support any of the Printer attributes listed in section 8.11.
- 2029 7. MAY support any of the values of the Printer Descriptions attributes in section 10.

## 2030 12 Normative References

2031 Note: The references in the body of this IEEE-ISTO document use the more reader-friendly mnemonic symbols  
 2032 below, rather than the RFC number (except for [RFC2910] and [RFC2911]). IETF RFCs and IANA registrations  
 2033 require using the RFC numbers in the body of the document for references.

## 2108 14 IANA Considerations

2109 This section contains the registration information for IANA to add to the various IPP Registries according to the  
2110 procedures defined in RFC 2911 [RFC2911] section 6 to cover the definitions in this document. [The resulting](http://www.iana.org/assignments/ipp-registrations-registry)  
2111 [registrations will be published in the http://www.iana.org/assignments/ipp-registrations-registry.](http://www.iana.org/assignments/ipp-registrations-registry)

2112 *Note to the RFC Editor: Replace the References below with the RFC number for the appropriate document,*  
2113 *so that it accurately reflects the content of the information for the IANA Registry.*

2114 **14.1 Attribute Registrations**

2115 The following table lists all the attributes defined in this document. These are to be registered according to the  
 2116 procedures in RFC 2911 [RFC2911] section 6.2.

2117	<u>Attribute Name (attribute syntax):</u>	<u>Reference:</u>	<u>Section:</u>
2119	<del>Document Description attributes:</del>		
2120	Document Description attributes:	Reference:	Section:
2121	attributes-charset (charset)	[RFC2911]	4.3.19
2122	attributes-natural-language (naturalLanguage)	[RFC2911]	4.3.20
2123	compression (type3 keyword)	[RFC2911]	3.2.1.1
2124	current-page-order (type2 keyword)	[prod-print]	4.1
2125	date-time-at-completed (dateTime)	[RFC2911]	4.3.14.7
2126	date-time-at-creation (dateTime)	[RFC2911]	4.3.14.5
2127	date-time-at-processing (dateTime)	[RFC2911]	4.3.14.6
2128	detailed-status-message (1setOf text (MAX))	[RFC2911]	4.3.10
2129	document-access-errors (1setOf text (MAX))	[RFC2911]	4.3.11
2130	document-format (documentFormat)	[RFC2911]	3.2.1.1
2131	<u>document-id-uri (uri)</u>	<u>[this spec]</u>	8.2
2132	<u>document-message (text(127))</u>	<u>[this spec]</u>	8.10
2133	document-name (name(MAX))	[RFC2911]	3.2.1.1
2134	document-natural-language (naturalLanguage)	[RFC2911]	3.2.1.1
2135	document-number (integer(0:MAX))	[this spec]	8.1

## 14.2 Additional Enum Attribute Value Registrations for the “operations-supported” Printer Attribute

The following table lists all the new enum attribute values defined in this document as additional type2 enum values for use with the “operations-supported” Printer Description attribute. These are to be registered according to the procedures in RFC 2911 [RFC2911] section 6.1.

Value	Name	Reference	Section:
-----	-----	-----	-----
	<u>document-state (type1 enum)</u>	[this spec]	§8.5
3	<u>pending</u>	[this spec]	§8.5
5	<u>processing</u>	[this spec]	§8.5
7	<u>canceled</u>	[this spec]	§8.5
8	<u>aborted</u>	[this spec]	§8.5
9	<u>completed</u>	[this spec]	§8.5
	<u>job-finishings (1setOf type2 enum)</u>	[this spec]	§7.1.4
	<u>&lt;enum values are the same as “finishings”&gt;</u>		
	operations-supported (type2 enum):		
0x0032	Cancel-Current-Document	[this-spec]	§3.10
0x0033	Cancel-Document	[this-spec]	§3.9
0x0034	Get-Document-Attributes	[this-spec]	§3.5
0x0035	Get-Documents	[this-spec]	§3.7
0x0036	Delete-Document	[this-spec]	§3.11
0x0037	Set-Document-Attributes	[this-spec]	§3.8
0x0038	Validate-Document	[this-spec]	§3.5
0x0039	Create-Document	[this-spec]	§3.1
0x003A	Send-Data	[this-spec]	§3.2

~~–§The resulting enum attribute value registrations will be published in the <http://www.iana.org/assignments/ipp-registrations-registry>.~~

## 14.3 Operation Registrations

The following table lists all of the operations defined in this document. These are to be registered according to the procedures in RFC 2911 [RFC2911] section 6.4.

Operations:	Reference:	Section:
Cancel-Current-Document	[this-spec]	§3.10

2296	Cancel-Document	[this-spec]	§3.9
2297	Get-Document-Attributes	[this-spec]	§3.5
2298	Get-Documents	[this-spec]	§3.7
2299	Delete-Document	[this-spec]	§3.11
2300	Set-Document-Attributes	[this-spec]	§3.8
2301	Validate-Document	[this-spec]	§3.5
2302	Create-Document	[this-spec]	§3.1
2303	Send-Data	[this-spec]	§3.2
2304			

2305 **15 Internationalization Considerations**

2306 The internationalization considerations for this extension for handling the Document object are the same as for  
 2307 handling the Job object in [RFC2911].

2308 **16 Security Considerations**

2309 The Document object should provide no more increased security considerations than the Job object. The Printer  
 2310 MUST provide the same access control for Document objects as for Job objects.

## 2337 20 Appendix A: Document operations compared to Job operations

2338 This appendix compares the Document operations with the existing Job operations to show the parallelism.

2339 Table 14 compares the Job and Document operations. The two Conf. columns indicate the conformance  
 2340 requirements (REQUIRED = REQ, OPTIONAL = OPT) for the Job and Document operations respectively. A "REQ"  
 2341 in the Document Conformance column means if the Document object is supported. Whether a Document operation  
 2342 is a method on the Job object or the Document object depends on the modeling regime and is not an essential part  
 2343 of the semantics described here, since these semantics are intended to apply to both to object-oriented and object-  
 2344 based protocols, APIs, and implementations.

2345 **Table 14 - Document operations compared to Job operations**

Job operations	Job Conf.	Document operations	Doc Conf
<b>Cancel-Current-Job</b>	OPT	<b>Cancel-Current-Documnt</b>	OPT
<b>Cancel-Job</b>	REQ	<b>Cancel-Documnt</b>	<del>OPT</del> REQ
<b>Create-Job</b>	OPT	<b>Create-Documnt</b>	REQ
<b>Get-Job-Attributes</b>	REQ	<b>Get-Documnt-Attributes</b>	REQ
<b>Get-Jobs</b>	REQ	<b>Get-Documents</b>	REQ
<b>Hold-Job</b>		<i>N/A, can only hold an entire job.</i>	
<b>Print-Job</b>	REQ	<b>Send-Documnt</b> (existing operation - see [RFC2911] with an additional Document attributes group defined in section 3.3)	REQ <sup>50</sup>
<b>Print-URI</b>	OPT	<b>Send-URI</b> (existing operation - see [RFC2911] with an additional Document attributes group defined in section 3.4)	OPT
<i>N/A</i>		<b>Send-Data</b>	REQ
<b>Promote-Job</b>	OPT	<i>N/A, can only promote an entire job</i>	
<b>Purge-Jobs</b>	OPT	<b>Delete-Documnt</b>	OPT
<b>Release-Held-New-Jobs</b>	OPT	<i>N/A, can only release entire jobs</i>	
<b>Release-Job</b>	OPT	<i>N/A, can only release an entire job</i>	
<b>Reprocess-Job</b>	OPT	<i>N/A, can only reprocess an entire job</i>	
<b>Restart-Job</b>	OPT	<i>N/A, can only restart an entire job</i>	
<b>Resume-Job</b>	OPT	<i>N/A, can only resume an entire job</i>	
<b>Schedule-Job-After</b>	OPT	<i>N/A, can only schedule an entire job</i>	
<b>Set-Job-Attributes</b>	OPT	<b>Set-Documnt-Attributes</b>	OPT
<b>Suspend-Current-Job</b>	OPT	<i>N/A, can only suspend an entire job in order to run another one</i>	
<b>Validate-Job</b>	REQ	<b>Validate-Documnt</b>	REQ

2346  
 2347

<sup>50</sup> The Send-Documnt operation is OPTIONAL for a Printer to conform to [RFC2911], but is REQUIRED for a Printer to conform to this Document object specification.

2348 **21 Annex B: Change Log (informative)**

2349 Version 0.5, 25 October 2002, as a result of the PWG Semantic Model telecon, October 24, 2002:

- 2350 1. Fixed the title to say "Proposed Standard" and removed the 5100.n number until the document is approved
- 2351 by the PWG Last Call to progress as a Draft Standard.
- 2352 2. Changed Cancel-Documents from OPTIONAL to REQUIRED.
- 2353 3. Added Table 3 and Table 4 to show the request and response signatures of the Document Creation and
- 2354 Validation operations.
- 2355 4. Renamed the "document-number" operation attribute to "input-document-number", to agree with [override]
- 2356 and because the Document object is really the Input Document (as opposed to the Output Document). The
- 2357 Printer copies this value to the Document's "document-number" Document Description attribute.
- 2358 5. Clarified that the Printer MUST reject a Create-Documents request if the "document-number" already exists.
- 2359 6. Clarified that the client cannot supply Subscription attributes in any Document Creation requests.
- 2360 7. Added "document-message" (text(127)) operation attribute to the Document Creation requests to go with the
- 2361 "document-message" agreement (see point #15).
- 2362 8. Fixed Create-Documents response to return Job status attributes in Group 3 and Document status attributes
- 2363 in Group 4.
- 2364 9. Required the Printer to return just the "document-number" and "document-id-uri" (uri) Document Description
- 2365 attribute in a Document Creation response.
- 2366 10. Added the "document-mandatory-attributes" operation attribute.
- 2367 11. Separated the returned Job status attributes and the Document status attributes into two groups, one Job
- 2368 Attributes and the other Document attributes.
- 2369 12. Allowed the client to supply or omit the "document-uri" operation attribute in a Validate-Job request.
- 2370 13. Clarified that the "document-number" operation attribute MUST follow the Printer and Job Target in Group 1.
- 2371 14. Changed the Get-Documents response when there is no "requested-attributes" to simply "document-number"
- 2372 and "document-id-uri" to be parallel with the Get-Jobs operation.
- 2373 15. Changed the "message" operation attribute in Cancel-Documents and Cancel-Current-Documents to
- 2374 "document-message" operation attribute which the Printer copies to the "document-message" Document
- 2375 Description attribute for use both by the user and the operator.
- 2376 16. Clarified that the "document-state-reasons" values never affect Job scheduling.
- 2377 17. Made Job Level - page override programming higher precedence than Document level Document object
- 2378 attributes.
- 2379 18. Clarified PDL document data precedence and its relationship to Job Template attributes ending with "-
- 2380 requested".
- 2381 19. In Table 6, flagged the operation attributes that the Printer copies to the corresponding Job and Document
- 2382 Description attributes in Document Creation operations.
- 2383 20. Fixed "job-mandatory-attributes" operation attribute so its only supplied at Job level, now that we have
- 2384 "document-mandatory-attributes" operation attribute.
- 2385 21. Clarified that "ipp-attribute-fidelity" can be supplied at both the Job and Document Levels and how it interacts
- 2386 with "job-mandatory-attributes" and "document-mandatory-attributes" operation attributes.
- 2387 22. Disallowed "output-bin" at the Document Level (and Page Level). It subsets the single stream of Input-Pages
- 2388 across Input-Documents.
- 2389 23. Disallowed "page-ranges" at the Page Level.
- 2390 24. Disallowed "pages-per-subset" at the Document level (and Page Level).
- 2391 25. Disallowed "separator-sheets" at the Page Level.
- 2392 26. Added "document-printer-up-time" Document Description attribute for Get-Documents and Get-Documents-
- 2393 Attributes responses that the Printer MUST support, just like "job-printer-up-time" operation attribute for Get-
- 2394 Jobs and Get-Job-Attributes.

2396 Version 0.4, 14 ~~September~~ October 2002:

- 2397 1. Added the operation specifications.
- 2398 2. Added the Create-Documents and Send-Data to be more parallel with Jobs and support PWG PSI.
- 2399 3. Resolved the 15 issues in version 0.3 as discussed on the mailing list.
- 2400 4. Added the Attribute Precedence section 5.
- 2401 5. Added [prod-print2] attributes.

- 2402 6. Added job-mandatory-attributes, job-cover-back, job-cover-front, job-copies, job-finishings, job-finishings-col.  
2403 document-id-uri, and redirect-uri.  
2404

2405 Version 0.3, 9 September 2002:

- 2406 1. Reformatted as an IEEE-ISTO standard and added the usual sections for a standard.  
2407 2. Added "original-requesting-user-name" Operation attribute to Table 6.  
2408 3. Added "y" to "output-bin" in Table 8 so it MAY be a Document Template attribute.  
2409 4. Clarified the \* and \*\* in Table 9 - Job and Document Description attributes.  
2410 5. Added section 8.11 all of the Printer attributes defined In any IPP standard.  
2411 6. Allocated operation-id enums in section 10 to the 7 Document operations.  
2412 7. Added the conformance section 11  
2413 8. Completed the IANA Considerations section 14.  
2414  
2415
