## IPP Enterprise Printer Extensions v2.0 (EPX)

Status: Interim

Abstract: This specification defines extensions to IPP/1.1 [STD92] to support the IPP [Job Proof](#) [JobPrint](#) Feature, Job Storage Feature and ~~Password Protected~~ [Job Protection](#) Feature, to better enable authenticated release workflows that are used in institutional IT environments such as corporate businesses ~~or universities~~. ~~These features replace the deprecated Job Save and Proof Print features defined in "Internet Printing Protocol (IPP): Job and Printer Extensions – Set 2 (JPS2)" [PWG5100.11],~~ ~~governments or universities.~~

This document is a PWG Working Draft. For a definition of a "PWG Working Draft", see:

31 This document may be copied and furnished to others, and derivative works that comment  
32 on, or otherwise explain it or assist in its implementation may be prepared, copied, published  
33 and distributed, in whole or in part, without restriction of any kind, provided that the above  
34 copyright notice, this paragraph and the title of the Document as referenced below are  
35 included on all such copies and derivative works. However, this document itself may not be  
36 modified in any way, such as by removing the copyright notice or references to the IEEE-  
37 ISTO and the Printer Working Group, a program of the IEEE-ISTO.

38 Title: *IPP Enterprise Printer Extensions v2.0 (EPX)*

39 The IEEE-ISTO and the Printer Working Group DISCLAIM ANY AND ALL WARRANTIES,  
40 WHETHER EXPRESS OR IMPLIED INCLUDING (WITHOUT LIMITATION) ANY IMPLIED  
41 WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

42 The Printer Working Group, a program of the IEEE-ISTO, reserves the right to make  
43 changes to the document without further notice. The document may be updated, replaced  
44 or made obsolete by other documents at any time.

45 The IEEE-ISTO takes no position regarding the validity or scope of any intellectual property  
46 or other rights that might be claimed to pertain to the implementation or use of the technology  
47 described in this document or the extent to which any license under such rights might or  
48 might not be available; neither does it represent that it has made any effort to identify any  
49 such rights.

50 The IEEE-ISTO invites any interested party to bring to its attention any copyrights, patents,  
51 or patent applications, or other proprietary rights which may cover technology that may be  
52 required to implement the contents of this document. The IEEE-ISTO and its programs shall  
53 not be responsible for identifying patents for which a license may be required by a document  
54 and/or IEEE-ISTO Industry Group Standard or for conducting inquiries into the legal validity  
55 or scope of those patents that are brought to its attention. Inquiries may be submitted to the  
56 IEEE-ISTO by e-mail at: [ieee-isto@ieee.org](mailto:ieee-isto@ieee.org).

57 The Printer Working Group acknowledges that the IEEE-ISTO (acting itself or through its  
58 designees) is, and shall at all times, be the sole entity that may authorize the use of  
59 certification marks, trademarks, or other special designations to indicate compliance with  
60 these materials.

61 Use of this document is wholly voluntary. The existence of this document does not imply that  
62 there are no other ways to produce, test, measure, purchase, market, or provide other goods  
63 and services related to its scope.

64

**65 About the IEEE-ISTO**

66 The IEEE-ISTO is a not-for-profit corporation offering industry groups an innovative and  
67 flexible operational forum and support services. The IEEE-ISTO provides a forum not only  
68 to develop standards, but also to facilitate activities that support the implementation and  
69 acceptance of standards in the marketplace. The organization is affiliated with the IEEE  
70 (<http://www.ieee.org/>) and the IEEE Standards Association (<http://standards.ieee.org/>).

71 For additional information regarding the IEEE-ISTO and its industry programs visit:

72 <http://www.ieee-isto.org>

**73 About the IEEE-ISTO PWG**

74 The Printer Working Group (or PWG) is a Program of the IEEE Industry Standards and  
75 Technology Organization (ISTO) with member organizations including printer  
76 manufacturers, print server developers, operating system providers, network operating  
77 system providers, network connectivity vendors, and print management application  
78 developers. The group is chartered to make printers and the applications and operating  
79 systems supporting them work together better. All references to the PWG in this document  
80 implicitly mean "The Printer Working Group, a Program of the IEEE ISTO." In order to meet  
81 this objective, the PWG will document the results of their work as open standards that define  
82 print related protocols, interfaces, procedures and conventions. Printer manufacturers and  
83 vendors of printer related software will benefit from the interoperability provided by voluntary  
84 conformance to these standards.

85 In general, a PWG standard is a specification that is stable, well understood, and is  
86 technically competent, has multiple, independent and interoperable implementations with  
87 substantial operational experience, and enjoys significant public support.

## 208 1. Introduction

209 This specification defines extensions to IPP/1.1 [STD92] to support the IPP Proof Job  
210 Feature, Job Storage Feature and ~~Password Protected Job~~ [Protection](#) Feature, to better  
211 enable authenticated release workflows that are used in institutional IT environments such  
212 as corporate businesses or universities.

213 The Proof Print, Job Save and Secure Print features defined in "Internet Printing Protocol  
214 (IPP): Job and Printer Extensions – Set 2 (JPS2)" [\[PWG5100.11\]](#) were not interoperable  
215 with one another, and were not defined in such a way that they could interoperate in practice.  
216 The Proof Print and Job Save features are deprecated, to be replaced by Job Proof Print  
217 Feature and Job Storage Feature. The Secure Print feature has been refactored and  
218 extended to become the ~~Password Protected Job~~ [Protection](#) Feature, which can interoperate  
219 with the Job Proof Print Feature and Job Storage Feature to enable more complex print  
220 workflow solutions to be created.

## 221 2. Terminology

222 This section defines the following additional terms that are used throughout this document.

### 223 2.1 Conformance Terminology

224 Capitalized terms, such as MUST, MUST NOT, RECOMMENDED, REQUIRED, SHOULD,  
225 SHOULD NOT, MAY, and OPTIONAL, have special meaning relating to conformance as  
226 defined in Key words for use in RFCs to Indicate Requirement Levels [BCP14]. The term  
227 CONDITIONALLY REQUIRED is additionally defined for a conformance requirement that  
228 applies when a specified condition is true.

### 229 2.2 Printing Terminology

230 Normative definitions and semantics of printing terms are imported from IETF Printer MIB  
231 v2 [RFC3805], IETF Finisher MIB [RFC3806], and IETF Internet Printing Protocol/1.1: Model  
232 and Semantics [STD92].

233 *Document*: An object created and managed by a Printer that contains the description,  
234 processing, and status information. A Document object may have attached data and is  
235 bound to a single Job.

236 *Job*: An object created and managed by a Printer that contains description, processing, and  
237 status information. The Job also contains zero or more Document objects.

238 *Logical Device*: a print server, software service, or gateway that processes Jobs and either  
239 forwards or stores the processed Job or uses one or more Physical Devices to render output.

240 *Output Device*: a single Logical or Physical Device

241 *Physical Device*: a hardware implementation of [aan](#) endpoint device, e.g., a marking engine,  
242 a fax modem, etc.

### 243 2.3 Protocol Role Terminology

244 This document also defines the following protocol roles in order to specify unambiguous  
245 conformance requirements:

246 *Client*: Initiator of outgoing connections and sender of outgoing operation requests  
247 (Hypertext Transfer Protocol -- HTTP/1.1 [RFC7230] User Agent).

248 *Printer*: Listener for incoming connections and receiver of incoming operation requests  
249 (Hypertext Transfer Protocol -- HTTP/1.1 [RFC7230] Server) that represents one or more  
250 Physical Devices or a Logical Device.

### 251 2.4 Job State Terminology

252 This document defines features that influence the trajectory of a Job through the various Job  
253 states. The states defined for "job-state" [STD92] and the transitions between these states  
254 are illustrated in Figure 1. **THIS SUB-SECTION SHOULD BE REMOVED BEFORE FINAL**  
255 **PUBLICATION.**

256 *Job Not Completed*: The phase when a Job is in the 'pending', 'pending-held', 'processing',  
257 or 'processing-stopped' state.

258 Job Retention: The phase when a Job is in its terminal state ('canceled', 'aborted', or  
259 'completed') before it has been stripped of its Document data.

260 Job History: After the Job Retention phase expires for a Job, the Printer deletes the  
261 Document data for the Job and the Job becomes part of the Job History. The Printer MAY  
262 also delete any number of the Job attributes.

263 Job Removal: After the Job has remained in the Job History for an implementation-defined  
264 time, such as when the number of Jobs exceeds a fixed number or after a fixed time period  
265 (which MAY be zero seconds), the IPP Printer removes the Job from the system.

266 *'pending'*: The Job is a candidate to start processing but is not yet processing.

267 *'pending-held'*: The Job is not a candidate for processing for any number of reasons but will  
268 return to the 'pending' state as soon as the reasons are no longer present.

269 ~~*'processing'*: The Job is a candidate to start processing but is not yet processing.~~

270 ~~*'processing'*: One or more of the following: (1) the Job is using, or is attempting to use, one~~  
271 ~~or more purely software processes that are analyzing, creating, or interpreting a PDL, etc.;~~  
272 ~~(2) the Job is using, or is attempting to use, one or more hardware devices that are~~  
273 ~~interpreting a PDL; making marks on a medium; and/or performing finishing, such as~~

274 [stapling, etc.:](#) (3) [the Printer has made the Job ready for printing, but the Output Device is](#)  
275 [not yet printing it, either because the Job hasn't reached the Output Device or because the](#)  
276 [Job is queued in the Output Device or some other spooler, waiting for the Output Device to](#)  
277 [print it.](#)

278 *'processing-stopped'*: [The Job is a candidate to start processing but is not yet processing has](#)  
279 [stopped while processing for any number of reasons and will return to the 'processing' state](#)  
280 [as soon as the reasons are no longer present.](#)

281 *'canceled'*: The Job has been canceled by a User-initiated action such as a Cancel-Job  
282 operation or some non-IPP method, the Printer has completed canceling the Job, and all  
283 Job Status attributes have reached their final values for the Job.

284 *'aborted'*: The Job has been aborted by the system, usually while the Job was in the  
285 'processing' or 'processing-stopped' state, the Printer has completed aborting the Job, and  
286 all Job Status attributes have reached their final values for the Job.

287 *'completed'*: The Job has completed successfully or with warnings or errors after processing,  
288 all of the Job Media Sheets have been successfully stacked in the appropriate output bin(s),  
289 and all Job Status attributes have reached their final values for the Job.

IPP Job States and State Transitions (RFC 8011 Section 5.3.7)

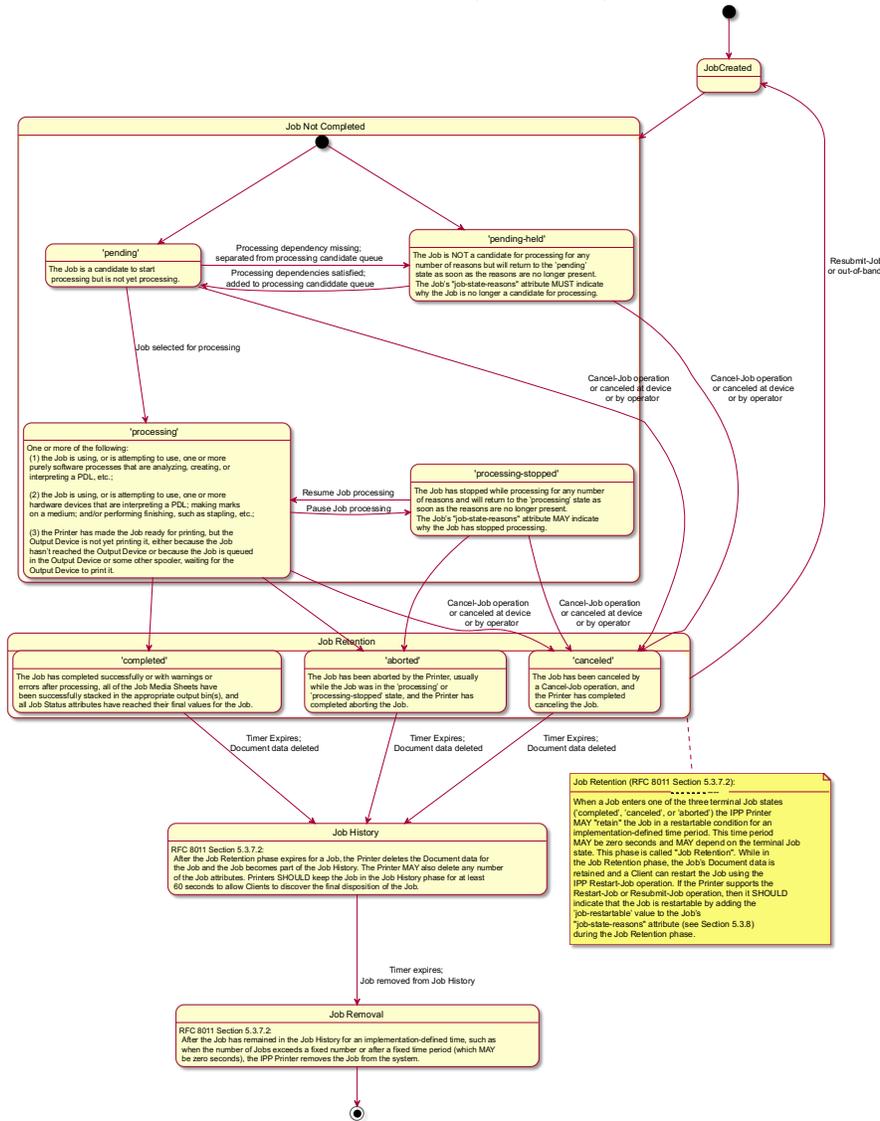

Figure 1 - IPP Job States and Transitions

290  
291

## 292 2.5 Other Terminology

293 *Document Creation Operations:* The operations that create Document objects: Print-Job,  
294 Print-URI, Send-Document and Sent-URI [STD92].

295 *Input Page:* A page according to the definition of "pages" in the language used to express  
296 the Document data [STD92].

297 *Job Creation operation:* One of the operations that creates a Job object: Print-Job, Print-  
298 URI and Create-Job. The Restart-Job operation [STD92] is not considered a Job Creation  
299 operation, since the Printer re-uses the existing Job object. The Validate-Job operation is  
300 not considered a Job Creation operation because no Job object is created. Therefore, when  
301 a statement also applies to either the Restart-Job and/or the Validate-Job operation, they  
302 are mentioned explicitly.

303 *Job Instructions:* Information that affects how the Job and its associated documents are to  
304 be processed. This includes the Job Template Attributes, some Operation Request  
305 Attributes, and other attributes (such as defaults) that are applied to a job.

306 *Job Submission Operations:* The Job Submission Operations are the IPP operations that  
307 create Jobs and Documents: Print-Job, Print-URI, Create-Job, Send-Document and Send-  
308 URI [STD92].

309 *Password Protected Job:* The Job that has a password permanently attached to it that must  
310 be provided to the Printer to authorize its printing. If the Job is duplicated, either via an IPP  
311 Reprocess-Job or Resubmit-Job operation, or out of band of IPP via control panel-initiated  
312 reprinting or some other method, the password is included in the new Job to require  
313 authorization for the new Job.

314 *Precedence:* The specification of the order or ranking of a series of instructions or attributes  
315 from multiple sources referring to the same functionality. See section 4.2 of this specification  
316 for a description of the Attribute Precedence model.

317 *Production Printer:* A Printer that produces large quantities of high-quality output, that often  
318 requires operator participation to make decisions as to the choice of job and its parameters.

319 ~~*Proof Job:* A Proof Job is a Job that has multiple collated copies, where Job is moved to the  
320 'processing-stopped' state once the first copy is printed, to allow review by the User before  
321 the remaining number of copies are printed.~~

322 *Proof Job:* A Retained Job that the Printer retains (until removed by a Delete-Job or Purge-  
323 Jobs operation or aged out by the Printer using a different policy than for ordinary completed  
324 Jobs) after printing a proof so that a copy of it can be printed any time after it has been  
325 proofed using the Reprocess-Job or Resubmit-Job operations, rather than aging the job out  
326 after an implementation-defined period.

327 *Raster image:* A binary bitmap representation of an image.

328 *Retained Job*: A ~~Retained Job~~ ~~is a job~~ that the Printer retains in the so-called Job Retention  
329 Phase (see [STD92] section 5.3.7.2 Partitioning of Job States) in the Job's terminal state  
330 ('completed', 'aborted', or 'canceled') after processing it, for an implementation-defined  
331 period (including zero seconds). An exact copy of a Retained Job can be created using a  
332 Reprocess-Job operation. A modifiable copy of a Retained Job can be created using a  
333 Resubmit-Job operation.

334 *RIP*: Raster Image Processor - a page description language interpreter.

335 *Stored Job*: A ~~Stored Job~~ ~~is a~~ Retained Job that has reached the 'completed' state and that  
336 has identifying characteristics marking it as a Stored Job instead of simply as a previously  
337 processed Job. The Documents in a Stored Job are maintained in their originally submitted  
338 state and format. The Printer retains a Stored Job indefinitely, unless otherwise configured,  
339 so that it can be listed and selected for reprinting at some time in the future.

## 340 2.6 Acronyms and Organizations

341 *IANA*: Internet Assigned Numbers Authority, <http://www.iana.org/>

342 *IETF*: Internet Engineering Task Force, <http://www.ietf.org/>

343 *ISO*: International Organization for Standardization, <http://www.iso.org/>

344 *PWG*: Printer Working Group, <http://www.pwg.org/>

## 345 3. Requirements

### 346 3.1 Rationale for IPP Enterprise Printer Extensions v2.0

347 IETF and PWG IPP printing standards define an abstract model of a Print Service (i.e., ISO  
348 DPA Logical Printer) and a Print Device (i.e., ISO DPA Physical Printer) in section 3.1 of  
349 IETF IPP/1.1 [STD92]. Some IPP Printers already support proofing, saving, and reprinting  
350 of large Print Jobs via vendor proprietary operations and attributes.

351 Therefore, this IPP Enterprise Printer Extensions v2.0 specification should:

- 352 1. Support Proof Jobs using IPP Job Creation operations;
- 353 2. Support Stored Jobs using IPP Job Creation operations;
- 354 3. Support ~~reprinting~~ ~~creating new Jobs from~~ stored or proofed Jobs, with ~~possibly~~  
355 different processing instructions;
- 356 4. Support Password Protected Jobs using IPP Job Creation operations;
- 357 5. Support interoperability between Proof Jobs, Stored Jobs and Password  
358 Protected Jobs such that a single Job can be any combination of the 3 including  
359 all 3 (e.g. a "Password Protected Stored Proof Job").

Commented [KS(&SA1)]: Does this fit the new "Proof Job" notion? Or is this a holdover from the old "Proof Print Job"

## 360 3.2 Use Cases

### 361 3.2.1 Job Protection Using a Job Password Protected Job

362 Frank works in a sales office that is large enough for him to have privacy concerns, but not  
363 so large that the printers are integrated into the IT infrastructure in a sophisticated manner.  
364 He is editing a sensitive business report that contains financial data. He wants to make sure  
365 that, if he prints it to the office's workgroup printer, he can be confident only people with the  
366 original password can pick it up or re-print it. Frank sees that the workgroup printer supports  
367 Password Protected Jobs, so he specifies a "Job Password" when he prints it. The  
368 workgroup printer delays printing the Job until someone first provides the matching  
369 password. Frank goes to the workgroup printer, observes that his Password Protected Job  
370 is listed on the control panel, selects it, and enters the job's password at the prompt. The  
371 printer prints the Password Protected Job, and Frank can relax knowing the printed Job was  
372 safe from others' view.

### 373 3.2.2 Authenticated Job Release

374 James works in a large law office where the printers are integrated into the IT AAA  
375 infrastructure. He is editing a set of documents for a client. He wants to make sure that, if he  
376 prints it to the office's workgroup printer, he can be confident he will be the only one that will  
377 be able to pick it up or re-print it. The workgroup printer supports Authenticated Job Release,  
378 so James selects "Authenticated Release" when he prints it. The Printer challenges James'  
379 laptop for authentication credentials, and James provides them to the Client. workgroup  
380 printer waits to print the Job until someone has provide the matching password. Frank goes  
381 to the workgroup printer, finds the held job, enters the matching password at the prompt,  
382 and the Job is printed.

### 383 3.2.3 Proof Print

384 Alice, Bob, and Charlie work in the system engineering department of a large software  
385 vendor. They collaborate to find, describe, and evaluate software feature requirements for  
386 financial management tools in their requirements database.

387 Alice is an artist and chooses their standard fonts and writes style sheets and layout guides  
388 for their software requirements specifications. Bob is a quiet, steady worker and an excellent  
389 proofreader. Charlie is a good talker who does the interviewing of the marketers and  
390 engineers.

391 Once a month, Charlie extracts from their database all of the detailed software requirements  
392 for each project into a spreadsheet. He also extracts all the high-level software requirements  
393 into a word processing document. Charlie then submits a single Print Job with two  
394 Documents [PWG5100.5] (the spreadsheet and the word processing document) for a proof  
395 print of 3 copies (single-sided and portrait).

396 Alice searches for layout and visual content errors, while Bob looks for typos and missing  
397 words. Charlie commits their fixes to the database, regenerates the source documents, and  
398 does another cycle of proof print.

399 Finally, Charlie wants to produce 60 copies (2-up, two-sided, and landscape) of the retained  
400 proof Print Job. So, he reprints the saved Print Job (without sending the document data  
401 again) but specifying overrides of some processing instructions.

### 402 3.2.4 Job Storage

403 Vincent is an administrative assistant for a school. The school provides its teachers with  
404 paper forms for documenting their class assignments and attendance. Vincent makes these  
405 forms available on the school's web site and also on the school's workgroup printer as a  
406 Stored Job accessible by any accounts in the Faculty user group. He sends an email to the  
407 school faculty letting them know that the Stored Job is available for reprinting.

408 Lily is a teacher. She has run out of her supply of the assignment tracking form. She goes  
409 to the school's office, logs in using her faculty account, and selects Stored Jobs. Among the  
410 Jobs visible to her account, she finds and chooses the assignment tracking form from the  
411 workgroup printer's Stored Jobs list on its control panel, chooses to have 30 copies made,  
412 and taps Print. The copies are printed, and she returns to her classroom.

## 413 3.3 Exceptions

### 414 3.3.1 [Unauthorized Access Job Protection Using a Job Password Protected Job](#)

415 Velma is one of Frank's co-workers. She is very competitive and also has questionable  
416 business ethics. She goes to the department's workgroup printer to see if she can re-print  
417 any of Frank's reports. She finds his latest draft report and tries to re-print it. The Job Velma  
418 selected is a Password Protected Job. The workgroup printer presents a password  
419 challenge UI to request the Job Password. Velma doesn't know it, so she clicks "Cancel"  
420 and goes to the break room to brood.

## 421 3.4 Out of Scope

422 The following are considered out of scope for this document:

- 423 1. How the Printer manages its storage for stored jobs or pending jobs
- 424 2. How the Printer implements authentication and authorization

## 425 3.5 Design Requirements

426 This IPP Enterprise Printer Extensions v2.0 design should:

- 427 (1) Follow the naming conventions defined in IETF IPP/1.1 [STD92], including  
428 keyword value (lowercase) and hyphenation requirements;

- 429 (2) Optimize compatibility with existing IETF and PWG IPP operations when  
430 making design decisions in defining new operations and attributes;
- 431 (3) Define new attributes in support of the ~~Password Protected~~ Job  
432 ~~feature~~Protection Feature;
- 433 (4) Define new attributes in support of the Job Storage feature;
- 434 (5) Define new attributes in support of the ~~Job~~ Proof Print ~~feature~~Feature;
- 435 (6) Define additional attributes .
- 436

## 437 4. Semantics Common to More Than One Attribute

### 438 4.1 Overview

439

	"job-password"	"job-storage"	"proof-print"	"job-retain-until"
"job-password"	n/a	Yes	Yes	
"job-storage"				
"proof-print"				

440

### 441 4.2 Job Storage Feature

442 The Job Storage Feature enables a User to "store" a Job and its Documents in their originally  
 443 submitted and unprocessed form, so that the Job [mightcan](#) be selected for reprinting at a  
 444 later time. A Stored Job's visibility will depend on its access settings; it might be visible to all  
 445 users, or might only be visible to the originating user, or a particular group. A Client requests  
 446 a Job be treated as a Stored Job by supplying the "job-storage" Job Template attribute  
 447 (section 6.5) when submitting the Job Creation operation.

448 As with the Job Save and Reprint Feature, the Printer retains the Job indefinitely in the Job  
 449 Retention Phase (see [STD92] section 5.3.7.2 "Partitioning of Job States") in the job's  
 450 terminal state ('completed', 'aborted', or 'canceled') after processing it, rather than aging the  
 451 job out after an implementation-defined period.

#### 452 4.2.1 Creating Stored Jobs

453 A Job becomes a Stored Job when the "job-storage" Job Template is specified in its creation  
 454 and it has reached the 'completed' state.

#### 455 4.2.2 Identifying and Listing Stored Jobs

456 A Job indicates its Job Storage status using one of the "job-state-reasons" keywords for the  
 457 Job Storage Feature defined in section 0. A Client can get a listing of Stored Jobs by  
 458 specifying either the 'stored-public' or 'stored-owner' keyword for the "which-jobs" attribute  
 459 (section 9.1) in a Get-Jobs operation [STD92].

#### 460 **4.2.3 Reprinting Stored Jobs**

461 This section defines the method by which to reprint a copy of the Saved Job using the  
462 Resubmit-Job operation. The Reprocess-Job operation, defined in [RFC3998], has been  
463 deprecated. The Resubmit-Job operation is defined in this document and operates on any  
464 Retained Job.

##### 465 **4.2.3.1 Reprinting Stored Jobs using the Resubmit-Job operation**

466 The Resubmit-Job operation [PWG5100.7] re-processes a copy of any Retained Job with  
467 the ability to supply additional operation and Job Template attributes that will affect the  
468 processing of that copy of the Job by either overriding the values of existing attributes or  
469 providing additional attributes. The Resubmit-Job operation has the same structure as the  
470 Print-URI operation (see [STD92] section 4.2.2) except that the “job-id” (integer(1:MAX))  
471 operation attribute MUST take the place of the “document-uri” (uri) operation attribute.

##### 472 **4.2.3.2 Reprinting Stored Jobs using the Printer Control Panel**

473 Stored Jobs can be reprinted using the Printer's control panel (control console). The details  
474 of the user experience and presentation are beyond the scope of this document, but ought  
475 to reflect the semantics of the Job Storage feature defined in this IPP Enterprise Printer  
476 Extensions v2.0 specification.

#### 477 **4.3 ~~Password Protected~~ Job Protection Feature**

478 The ~~Password Protected~~ Job Protection Feature enables a [userUser](#) to protect a Job with a  
479 password that is required for authorizing printing or reprinting the Job. A Client requests a  
480 Job be treated as a Password Protected Job by supplying the “job-password”, “job-  
481 password-action” and “job-password-encryption” Job Template attributes (sections 5.1, 5.2,  
482 and 5.3) when submitting the Job Creation operation.

483 The password is permanently attached to the Job and persists with the Job until it enters the  
484 Job History phase [STD92]. If the Job is copied, as in the case of reprinting a Stored Job,  
485 the password is preserved in the new copy. This feature can be combined with the Job  
486 Storage Feature and/or the [Job Proof Print featureFeature](#).

#### 487 **4.4 Job Proof Print Feature**

##### 488 **4.4.1 Original**

489 The [Job](#) Proof Print Feature enables a User to print a Proof Job and to save it as part of job  
490 processing in such a way that users can submit a request to print a copy of the Proof Job at  
491 a later time. A Client requests a Printer to print and save a Proof Job by supplying the “proof-  
492 print” Job Template attribute (section 6.6) when submitting the job. In this case, the Printer  
493 retains the Proof Job indefinitely in the so-called Job Retention Phase (see [STD92] section  
494 5.3.7.2 Partitioning of Job States) in the job's terminal state (‘completed’, ‘aborted’, or

495 'canceled') after processing it, rather than aging the job out after an implementation-defined  
496 period. In other words, a Proof Job is just a Retained Job that the Printer is retaining  
497 indefinitely. A Client can then request the Printer to reprint a copy of the Proof Job using the  
498 Resubmit-Job operation [PWG5100.7]. See section 12.5 Conformance Requirements for the  
499 REQUIRED "proof-print" Job Template attribute for additional conformance requirements for  
500 Clients and Printers.

#### 501 **4.4.2 New**

502 ~~The Proof Print Feature enables a User to print a first copy of a Proof Job, and then moves~~  
503 ~~the Job to the 'pending-held' state. If the User finds the output of that first copy to be~~  
504 ~~satisfactory, the User can release the Job to complete its processing to produce the~~  
505 ~~remaining number of copies.~~

## 506 **5. New Operation Attributes for Existing Operations**

507 This section defines additional Operation attributes for existing IPP operations.

### 508 **5.1 job-password (octetString(255)) for Job Creation operations**

509 This operation attribute allows a User to specify a password for that Job, causing the Job to  
510 become a Password Protected Job. The Printer will only print a Password Protected Job  
511 after the same password value has been entered into the Printer's control panel.

512 The Client encrypts the password acquired by the job submitting application using one of  
513 the methods specified by the "job-password-encryption-supported" attribute. The encrypted  
514 password value is sent to the Printer as the value of the "job-password" attribute. If a "job-  
515 password" value is provided, other than a zero-length string, the Printer MUST disposition  
516 the Job according to the "job-password-action" operation attribute; if the "job-password-  
517 action" attribute is absent, the Printer MUST put the Job in the 'pending-held' state and add  
518 the 'job-password-wait' value to the Job's "job-state-reason" attribute.

519 The Printer uses the same encryption method specified in the "job-password-encryption"  
520 attribute on this password. When the locally-supplied encrypted password matches the  
521 value of the Job's "job-password" attribute, the Job removes the 'job-password-wait' value  
522 from its "job-state-reasons" attribute to indicate that that condition is no longer preventing  
523 processing. The method in which the password is entered and validated at the Printer is  
524 implementation dependent. If the Password Protected Job is released by the User while  
525 another Job is printing, the Password Protected Job SHOULD be the next Job printed after  
526 the current Job, unless the Printer has another Job which has a higher priority than the  
527 Password Protected Job as determined by the "job-priority" attribute.

528 This Operation attribute may OPTIONALLY be included in the request of the following Job  
529 Creation operations: Print-Job, Print-URI, and Create-Job.

530 The "job-password" attribute value MUST NOT be returned in a Get-Job-Attributes response  
531 or be provided via any non-IPP protocol.

532 The Job MUST preserve its "job-password" attribute, if it has one, for its entire lifespan. If a  
533 copy of a Job is created by a Resubmit-Job operation or via some mechanism out-of-band  
534 of IPP, the new copy MUST have a copy of the "job-password" attribute so that [that new](#)  
535 [copy](#) is also a Password Protected Job.

## 536 5.2 job-password-action (type2 keyword)

537 The "job-password-action" operation attribute specifies how a Job is processed when the  
538 "job-password" operation attribute (section 5.1) is included in a Job Creation request. If the  
539 Client supplies the "job-password" attribute but does not supply the "job-password-action"  
540 attribute, the Client and the Printer MUST assume the value is 'hold-job', to preserve  
541 backward compatibility with the earlier definition of "job-password" [\[PWG5100.11\]](#). The  
542 value specified by this operation attribute MUST be one of the values specified by the  
543 Printer's "job-password-action-supported" attribute (section 8.3).

544 Standard keyword values include:

- 545 • 'hold-job': The Job is placed in the 'pending-held' state and is released when the "job-  
546 password" value is entered at the Printer's console. The Job MUST NOT be retained  
547 once it has reached its terminal state ('completed', aborted' or 'canceled'). This is the  
548 semantic originally specified for the "job-password" operation attribute (section 5.1).
- 549 • 'process-and-retain': The Job is placed in the 'pending' state and it scheduled for  
550 processing without waiting for the User to enter the "job-password" value at the  
551 Printer's console.
- 552 • 'retain-only': The Job is placed in the 'completed' state as soon as all Documents are  
553 received by the Printer. The Printer will require a matching password for all reprints.

554 Once in a terminating state, the Job is retained according to the current value of its "job-  
555 retain-until-xxx" attributes.

## 556 5.3 job-password-encryption (type2 keyword) for Job Creation 557 operations

558 The "job-password-encryption" Operation attribute specifies the type of encryption used to  
559 create the value specified by the "job-password" operation attribute in the request of the  
560 following Job Creation operations: Print-Job, Print-URI, and Create-Job. The Client MUST  
561 supply this operation attribute whenever the "job-password" attribute is supplied. The value  
562 MUST be one of the values specified in the Printer's "job-password-encryption-supported"  
563 attribute (section 8.3).

**Commented [KS(&SA2):** 'hold-and-retain'? This seems a bit too close to the "print-and-store" semantic of the "job-storage-disposition" member of "job-storage". It seems like the choice should be either 'hold' (password applies to the first printing only), 'retain' (password required for all reprintings but does not apply to the first printing) or 'hold-and-retain' (password required for all printings)

**Commented [KS(&SA3):** I removed the " | name(MAX)" because that seems superfluous. Vendor extension keywords can be supported without having to have these two syntaxes. Or am I missing something?

**Commented [KS(&SA4):** No need for site-local encryption types, so having the "name(MAX)" syntax alternative doesn't provide any value

## 564 6. Job Template Attributes

565 Job Template attributes describe job processing behavior and conform to a set of rules. See  
566 [STD92] for the complete text of the rules that apply to each Job Template attribute called  
567 "xxx".

### 568 6.1 job-cancel-after (integer(1:MAX))

569 This Job Template attribute specifies the maximum number of seconds that are allowed for  
570 processing a Job. The cancel timer does not begin until the Job enters the 'processing' state.  
571 If the Job is canceled because of this timer, the Printer MUST add the 'job-canceled-after-  
572 timeout' keyword (~~section Error! Reference source not found.~~) to the "job-state-reasons"  
573 Job Status attribute. ([section 9.3](#)).

### 574 6.2 job-pause-after (integer(1:MAX))

575 [This Job Template attribute specifies after how many pages the Printer should pause](#)  
576 [processing a Job.](#)

### 577 6.26.3 job-phone-number (uri)

578 This Job Template attribute contains the contact telephone number for the Job. If supported,  
579 the Printer MUST accept the 'tel:' URI scheme [RFC2806] and MAY accept other schemes,  
580 such as the 'fax:' scheme [RFC2806]. Any processing by the Printer of the "job-phone-  
581 number" attribute is implementation-dependent.

### 582 6.36.4 job-recipient-name (name(MAX))

583 This Job Template attribute contains the name of the person that is to receive the output of  
584 the Job. The value of the "job-recipient-name" attribute is commonly printed on job sheets  
585 printed with the job. An example of another use of the "job-recipient-name" attribute is if the  
586 Printer accesses a database to get job delivery instructions for the recipient of a job. A zero-  
587 length value indicates that there is no job recipient name.

588 If the Client omits this attribute in a Job Creation request, the Printer MAY use the "job-  
589 recipient-name-default" attribute value, unless it has not been configured by the  
590 administrator, or MAY use the "authenticated user" name (see [MOD1.1] section 8.3),  
591 depending on implementation.

### 592 6.46.5 job-storage (collection)

593 The "job-storage" Job Template attribute is a collection whose members specify how a  
594 Printer processes a Job to become a Stored Job. See section 4.2 for a full description of the  
595 Job Storage Feature.

Commented [KS(&SA5)]: Do we want to keep this? I'm thinking not...it might have been tied to the HP Proof and Hold feature, which we have abandoned.

596 This attribute MAY be used with the "job-password" attribute for a Password Protected Job  
597 that is also a Stored Job.

598 **6.4.16.5.1 job-storage-access (type2 keyword)**

599 The "job-storage-access" member attribute specifies the access restrictions on the Stored  
600 Job. The value MUST be one of the keywords specified by the Printer's "job-storage-access-  
601 supported" Printer Description attribute (section 8.14). The "job-storage-access" member  
602 attribute MUST be preserved by the Job as a member of the "job-storage" Job Status  
603 attribute (section 7.1).

604 **6.4.26.5.2 job-storage-disposition (type2 keyword)**

605 The "job-storage-disposition" member attribute specifies how the Job is to be handled by the  
606 Printer during the 'processing' state. The value MUST be one of the values specified by the  
607 Printer's "job-storage-disposition-supported" Printer Description attribute (section 8.16).

608 The "job-storage-disposition" member attribute MUST NOT be preserved by the Job as a  
609 member of the "job-storage" Job Status attribute (section 7.1).

610 **6.4.36.5.3 job-storage-group (name(MAX))**

611 This member attribute specifies the group, if any, in which the Stored Job is listed. The value  
612 specified by the "job-storage-access" attribute (section 6.5.1) coordinates with the value of  
613 this attribute. If the "job-storage-access" attribute is 'group', then the value of this attribute  
614 MUST be one of the values specified by the Printer's "job-storage-group-supported" Printer  
615 Description attribute (section 8.17).

616 **6.56.6 proof-print (collection)**

617 This Job Template attribute indicates to the Printer that this Job is a Proof Job. This attribute  
618 allows a user to specify the attributes of the proof print(s) of the job that are to be printed  
619 prior to the printing the full run of the job. After the proof prints have been produced, the  
620 Printer MUST retain the completed job as a Proof Job for a period of time sufficient to allow  
621 users to proof the job, rather than aging it out after an implementation-defined period which  
622 SHOULD be longer than the period for ordinary completed Jobs (see Job Retention phase  
623 in [STD92] section 5.3.7.2 Partitioning of Job States). When a Proof Job is reprinted using  
624 any of the operations that reprint a Retained Job (e.g., Reprocess-Job or Resubmit-Job),  
625 the Printer MUST NOT copy the "proof-print" attribute from the Proof Job to the copy of the  
626 Proof Job so that the job is not re-proofed again. Only if the Resubmit-Job operation supplies  
627 its own "proof-print" attribute, will the copied job be proofed.

628 A Client MUST be able to supply and a Printer MUST support this attribute in order to claim  
629 support of this IPP Enterprise Printer Extensions v2.0 Specification, respectively. See  
630 section 12.5 Conformance Requirements for the REQUIRED "proof-print" Job Template  
631 attribute for additional conformance requirements for Clients and Printers.

632 [This attribute MAY be used with the "job-password" attribute for a Password Protected Job](#)  
 633 [that is also a Proof Job. A Printer indicates its support for this by listing "job-password" and](#)  
 634 ["job-password-encryption" in its "proof-print-supported" Printer Description attribute \(section](#)  
 635 [8.19\).](#)

**Commented [KS(&SA6):** Does this cause normative problems? Do we need to define "proof-print-job-password-supported (boolean)" and if absent then proof-print and job-password are incongruent as per 5100.11? But we WANT to enable this with this specification.

636 Table 1 lists the member attributes of the "proof-print" collection attribute.

637 **Table 1 - "proof-print" member attributes**

Member Attribute Name	Request	Printer Support
proof-print-copies	MUST	MUST
media	MUST be one or the other, but NOT both	MUST
media-col		MAY

638 **6.5.16.6.1 proof-print-copies (integer (0:MAX))**

639 The "proof-print-copies" member attribute specifies the number of copies the Printer MUST  
 640 produce in the proof job. The proof print(s) are produced using the Job Template attributes  
 641 specified with the Job, except any overridden by member attributes in this collection.

642 [If the "proof-print-copies" value is 0, then no proof prints are produced.](#)

**Commented [KS(&SA7):** Is it required that zero be supported?

643 After the requested number of proof prints have been successfully produced by the Printer,  
 644 then the Printer transitions the job to the 'completed' state and retains the job for a period of  
 645 time that is long enough for the users to proof the output of the Proof Job, rather than aging  
 646 the job out.

647 **6.5.26.6.2 media (type2 keyword | name(MAX)) or media-col (collection)**

648 Either the "media" (see [STD92]) or the "media-col" member attribute is used to indicate the  
 649 media that the Printer MUST use for the specified "proof-print-copies" of the Proof Job. The  
 650 member attributes are the same as those for the "media-col" attribute defined in  
 651 [PWG5100.3] and in section 11.5 of this specification.

652 The Client MUST supply either the "media" or the "media-col" member attribute, but NOT  
 653 both. If the Client supplies such a malformed request by supplying neither or both, the Printer  
 654 MUST (depending on implementation) either (1) reject the request and return the 'client-  
 655 error-bad-request' status code (see [STD92]) or (2) use either the "media" or the "media-col"  
 656 member attribute, independent of the value of the "ipp-attribute-fidelity" attribute supplied by  
 657 the Client.

658 Since this "media" member attribute has the same name as the "media" Job Template  
 659 attribute (defined [STD92]), the "media-supported" (1setOf (type2 keyword | name(MAX)))  
 660 Printer attribute identifies the values of this "media" member attribute (as well as the values  
 661 of the "media" Job Template attribute) that the Printer supports, i.e., the names of the

662 supported media. A value that is provided for the "media" member attribute in the collection  
663 would have the same effect as if the job were submitted with that value as the value of the  
664 "media" Job Template attribute.

665 Since this "media-col" member attribute has the same name as the "media-col" Job  
666 Template attribute (defined in [PWG5100.3] and in section 11.5 of this specification), the  
667 "media-col-supported" Printer attribute identifies the keyword names of the member  
668 attributes supported in this "media-col" member attribute (as well as the keyword names of  
669 the "media-col" Job Template attribute), i.e., the names of the member attributes that the  
670 Printer supports.

## 671 7. Job Status Attributes

### 672 7.1 job-storage (collection)

673 The "job-storage" Job Status attribute labels the Job as a Stored Job and specifies the  
674 storage handling requirements the Printer MUST follow. All the members of this Job Storage  
675 attribute are the same as those specified for the "job-storage" Job Template attribute (section  
676 6.5).

## 677 8. Printer Description Attributes

### 678 8.1 job-cancel-after-default (integer(1:MAX) | no-value)

679 This [Printer Description](#) attribute provides the default value of the "job-cancel-after" Job  
680 Template attribute (section 6.1).

### 681 8.2 job-cancel-after-supported (rangeOfInteger(1:MAX))

682 This [Printer Description](#) attribute provides the allowed range of values [the Printer will accept](#)  
683 for the "job-cancel-after" Job Template attribute (section 6.1).

### 684 8.3 job-password-action-supported (type2 keyword)

685 The "job-password-action-supported" Printer Description attribute specifies the Printer's  
686 supported password actions. A password action defines how a Job is processed when the  
687 "job-password" operation attribute (section 5.1) is included in a Job Creation request.

688 Standard password action keyword values include:

- 689 • 'hold-job': The Job is placed in the 'pending-held' state and is released when the "job-  
690 password" value is entered at the Printer's console. The Job MUST NOT be retained  
691 once it has reached its terminal state ('completed', aborted' or 'canceled'). This is the  
692 semantic originally specified for the "job-password" operation attribute (section 5.1).

693 • 'process-and-retain': The Job is placed in the 'pending' state and it scheduled for  
 694 processing without waiting for the User to enter the "job-password" value at the  
 695 Printer's console.

696 • 'retain-only': The Job is placed in the 'completed' state as soon as all Documents are  
 697 received by the Printer. The Printer will require a matching password for all reprints.

698 Once in a terminating state, the Job is retained according to the current value of its "job-  
 699 retain-until" and/or "job-retain-until-time" attributes.

700 **8.4 job-password-encryption-supported (1setOf (type2 keyword |**  
 701 **name(MAX)))**

702 The "job-password-encryption-supported" Printer Description attribute specifies which  
 703 encryption methods the Printer supports for Secure Print.

704 If the "job-password" operation attribute is supported, then this attribute MUST be supported.  
 705 Standard keyword values are in Table 2. The 'md2', 'md4', 'md5', and 'sha' keywords have  
 706 been DEPRECATED. Others may be deprecated in the future as the state of the art of  
 707 cryptography evolves.

708 **Table 2 - Standard keywords for "job-password-encryption-supported"**

Keyword	Description
'none'	The "job-password" attribute value is passed in the clear. No encryption has been applied. This value might also be used when the entire Operation is sent over a secure connection.
'md2'	The encryption method uses the MD2 hash algorithm defined in RFC 1319. [1]
'md4'	The encryption method uses the MD4 hash algorithm defined in RFC 1320. [1]
'md5'	The encryption method uses the MD5 hash algorithm defined in RFC 1321. [1]
'sha'	The encryption method uses the Secure Hash Algorithm 1 defined by the National Institute of Standards and Technology. [1]
'sha2-224'	The encryption method uses the Secure Hash Algorithm 2 defined by the National Institute of Standards and Technology, with an output size of 224 bits.

Commented [KS(&SA8): 'hold-and-retain'?

Commented [KS(&SA9): 'hold-and-retain'? I'm a little unclear how this would work.

Commented [KS(&SA10): Is it time for us to deprecate this?

Commented [KS(&SA11): Suggest we remove this...

'sha2-256'	The encryption method uses the Secure Hash Algorithm 2 defined by the National Institute of Standards and Technology, with an output size of 256 bits.
'sha2-384'	The encryption method uses the Secure Hash Algorithm 2 defined by the National Institute of Standards and Technology, with an output size of 384 bits.
'sha2-512'	The encryption method uses the Secure Hash Algorithm 2 defined by the National Institute of Standards and Technology, with an output size of 512 bits.
'sha2-512_224'	The encryption method uses the Secure Hash Algorithm 2 defined by the National Institute of Standards and Technology, with an output size of 512 bits, truncated to 224 bits.
'sha2-512_256'	The encryption method uses the Secure Hash Algorithm 2 defined by the National Institute of Standards and Technology, with an output size of 512 bits, truncated to 256 bits.
'sha3-224'	The encryption method uses the Secure Hash Algorithm 3 defined by the National Institute of Standards and Technology, with an output size of 224 bits.
'sha3-256'	The encryption method uses the Secure Hash Algorithm 3 defined by the National Institute of Standards and Technology, with an output size of 256 bits.
'sha3-384'	The encryption method uses the Secure Hash Algorithm 3 defined by the National Institute of Standards and Technology, with an output size of 384 bits.
'sha3-512'	The encryption method uses the Secure Hash Algorithm 3 defined by the National Institute of Standards and Technology, with an output size of 512 bits.
'sha3-512_224'	The encryption method uses the Secure Hash Algorithm 3 defined by the National Institute of Standards and Technology, with an output size of 512 bits, truncated to 224 bits.
'sha3-512_256'	The encryption method uses the Secure Hash Algorithm 3 defined by the National Institute of Standards and Technology, with an output size of 512 bits, truncated to 256 bits.
'shake-128'	The encryption method uses the SHAKE128 method defined by the National Institute of Standards and Technology, with an output size of 128 bits.

'shake-256'            The encryption method uses the SHAKE256 method defined by the National Institute of Standards and Technology, with an output size of 256 bits.

709 [1] - Deprecated

### 710 8.5 job-password-length-supported (rangeOfInteger (0:255))

711 The 4.1 "job-password-length-supported" Printer Description attribute specifies the minimum  
712 and maximum supported length of the unencrypted password, measured in characters. The  
713 character set encoding is specified by the "job-password-repertoire-configured" attribute  
714 (Section XX). The Printer is configured to accept an empty password if the range's minimum  
715 value is 0 (zero).

716 This attribute complements the existing "job-password-supported" attribute [\[PWG5100.11\]](#),  
717 which specifies the maximum password length supported before encryption, measured in  
718 octets.

### 719 8.6 job-password-repertoire-supported (1setOf (type2 keyword))

720 The "job-password-repertoire-supported" attribute enumerates the job password repertoires  
721 (allowable characters, character sets and encodings) the Printer can be configured to use.

722 The keywords are named according to a 'REGISTRY\_ENCODING\_RANGE' naming  
723 structure convention. Table 3 lists the standard keywords. Vendor repertoire keywords,  
724 prefixed with "vendor\_" to indicate a vendor-specific registry, may also be used. Vendor  
725 repertoire keywords SHOULD be registered with the PWG to achieve interoperability. As  
726 an example, a vendor may choose to register the 'vendor\_us-ascii\_lowercase' keyword to  
727 specify a repertoire limited to using only lowercase characters from the US ASCII encoding.

728 The "utf-8" encoding name indicates the use of Network Unicode [RFC5198].

729 **Table 3 - job-password-repertoire-supported keyword definitions**

<i>Keyword</i>	<i>Description</i>
'iana_us-ascii_digits'	Value must consist of only ASCII digits (0x30-0x39)
'iana_us-ascii_letters'	Value must consist of only US ASCII letters (0x41-0x5A, 0x61-0x7A)
'iana_us-ascii_complex'	Value must consist of US ASCII letters and numbers, with at least one uppercase letter, one lowercase letter, and one digit (0x30-0x39, 0x41-0x5A, 0x61-0x7A)

<i>'iana_us-ascii_any'</i>	Value must consist of US ASCII printable characters (0x20-0x7e)
<i>'iana_utf-8_digits'</i>	Value must consist of only UTF-8 numerical digits
<i>'iana_utf-8_letters'</i>	Value must consist of UTF-8 letters
<i>'iana_utf-8_any'</i>	Value must consist of UTF-8 printable characters

### 730 **8.7 job-password-repertoire-configured (type2 keyword)**

731 The "job-password-repertoire-configured" attribute indicates the password repertoire  
 732 currently configured for this Printer. The value of this attribute MUST be one of the values  
 733 specified in the Printer's "job-password-repertoire-supported" attribute (section XX). A  
 734 supporting Client can use this attribute's value to limit User input so that the value in "job-  
 735 password" will comply with the configured password repertoire.

### 736 **8.8 job-password-supported (integer(0:255))**

737 The "job-password-supported" Printer Description attribute indicates the maximum length  
 738 that the Printer will accept for the unencrypted password which the Client will encrypt as the  
 739 value of the "job-password" Operation Attribute. A conforming Printer MUST be able to  
 740 accept 255 octets without truncation. However, a Printer MAY be implemented as a gateway  
 741 to another print system that cannot accept the full 255-octet range, in which case the Client  
 742 MUST NOT allow an unencrypted password greater than the length specified by this  
 743 attribute.

### 744 **[8.9 job-pause-after-supported \(1setOf type2 keyword\)](#)**

745 [This attribute lists the](#)

### 746 **[8.98.10 job-phone-number-default \(uri\)](#)**

747 The default value supplied by the Printer if the Client omits the "job-phone-number" Job  
 748 Template attribute. This attribute SHOULD use the 'tel:' scheme [RFC2806].

### 749 **[8.108.11 job-phone-number-supported \(boolean\)](#)**

750 A true value indicates that the Printer accepts the "job-phone-number" attribute.

751 **8.448.12 job-recipient-name-default (name(MAX))**

752 The default value supplied by the Printer if the Client omits the ‘job-recipient-name’ Job  
753 Template attribute.

754 **8.428.13 job-recipient-name-supported (boolean)**

755 This attribute indicates whether the Printer accepts the “job-recipient-name” attribute.

756 **8.438.14 job-storage-supported (1setOf keyword)**

757 This attribute indicates whether the Printer supports the Job Storage feature, and what  
758 members are supported by the Printer.

759 [The Printer indicates support for Stored Jobs that are also Protected Jobs by including both](#)  
760 ["job-password" and "job-password-encryption" in the set of keywords. If the Printer lists](#)  
761 [these two attribute name keywords, it MUST accept "job-password" and "job-password-](#)  
762 [encryption" with "job-storage". If "job-password" and "job-password-encryption" are both](#)  
763 [specified for the Job, the Job MUST NOT return these attributes in a Get-Job-Attributes](#)  
764 [request. The Printer MUST preserve the "job-password" and "job-password-encryption" Job](#)  
765 [Status attributes in all copies of the original Job to maintain Job Protection.](#)

766

767 **8.448.15 job-storage-access-supported (1setOf type2 keyword)**

768 This attribute specifies the Job Storage access modes supported by the Printer. Standard  
769 keywords for the "job-storage-access" attribute are listed in Table 4.

770 **Table 4 - Standard keywords for "job-storage-access-supported"**

<i>Keyword</i>	<i>Meaning</i>
<i>"group"</i>	Visible to only the group to which the submitting most authenticated user is a member
<i>"owner"</i>	Visible to only the submitting most authenticated user
<i>"public"</i>	Visible to all users (may still be password protected)

771

772 **8.158.16 job-storage-disposition-supported (1setOf type2 keyword)**

773 This attribute specifies the Job Storage dispositions supported by the Printer. Standard  
774 keywords for the "job-storage-access" attribute are listed in Table 5.

775 **Table 5 - Standard keywords for "job-storage-disposition-supported"**

<i>Keyword</i>	<i>Meaning</i>
"none"	The Printer MUST print the Job. The Printer MUST NOT retain the Job in the Job Retention phase; it MUST move it immediately to the Job History phase.
"print-and-store"	The Printer MUST print the Job. If the Job reaches the 'completed' state, it MUST retain the Job in the Job Retention phase.
"store-only"	The Printer MUST NOT print the Job. The Printer MUST retain the Job in the Job Retention phase.

776 **8.168.17 job-storage-group-supported (1setOf name(MAX))**

777 This attribute specifies the user groups to which a Stored Job could be made visible when it  
778 is stored, using the "job-storage-group" member (section 6.5.3) of the "job-storage" attribute  
779 (section 6.5). The value of this attribute will list different values if returned in an authenticated  
780 Get-Printer-Attributes or Get-User-Printer-Attributes response.

781 **8.178.18 proof-print-default (collection)**

782 This attribute specifies the default value of "proof-print" ~~MUST~~the Printer will use when ~~not~~  
783 supplied~~the Client doesn't specify the "proof-print" Job Template attribute~~ in a Job Creation  
784 request. A Printer MUST support the same member attributes for this default collection as it  
785 supports for the corresponding "proof-print" Job Template attribute.

786 **8.188.19 proof-print-supported (1setOf type2-keyword)**

787 This attribute ~~specifies which~~lists the member attributes of "proof-print" that the Printer  
788 supports.

789 The Printer indicates support for Proof Print Jobs that are also Protected Jobs by including  
790 both "job-password" and "job-password-encryption" in the set of keywords. If the Printer lists  
791 these two attribute name keywords, it MUST accept "job-password" and "job-password-  
792 encryption" with "proof-print". If "job-password" and "job-password-encryption" are both  
793 specified for the Job, the Job MUST NOT return these attributes in a Get-Job-Attributes  
794 request. The Printer MUST preserve the "job-password" and "job-password-encryption" Job  
795 Status attributes in all copies of the original Job to maintain Job Protection.

## 8.20 proof-print-copies-supported (rangeOfInteger(0:MAX))

This attribute specifies the range of values the Printer supports for the "proof-print-copies" member attribute of the "proof-print" Job Template attribute (section 6.6.1).

## 9. Additional Values and Semantics for Existing IPP Attributes

This section defines additional values for existing attributes. The existing text for those attributes is not reproduced here in order to prevent deviations.

### 9.1 job-hold-until (type2 keyword | name(MAX))

This IPP Enterprise Printer Extensions v2.0 specification defines additional keyword values for the "job-hold-until" Job Template attribute [STD92] to support [workflow features specified elsewhere in this document](#). Table 6 [lists the new values and their uses](#).

Table 6 - Additional Keywords for "job-hold-until"

Keyword	Description
'owner-authorized'	Hold the Job until the Owner has authorized it to be released. The Printer MAY challenge the User for credentials to have the Job released. This provides functionality similar to the "job-password" operation attribute (section 5.1). Whereas the "job-password" attribute causes the Printer to challenge the User for the Job's password to release the Job to processing, this causes the Printer to challenge the User for authenticating credentials for a user account that is authorizes the Job to be released to processing.
'button-press'	Hold the Job until a button press on the Output Device's control panel authorizes it to be released to processing.

**Commented [KS(&SA12)]:** Minutes from April 2019 F2F said to drop this. But how should we then support the use case where a user's account credentials are used to hold the job?

**Commented [KS(&SA13)]:** Minutes from April 2019 F2F said to drop this. But how should we then support the use case where a user's account credentials are used to release a held Job?

### 9.2 which-jobs (type2 keyword) and which-jobs-supported (1setOf type2 keyword)

This IPP Enterprise Printer Extensions v2.0 specification defines additional keyword values for the IPP "which-jobs" operation attribute of the Get-Jobs operation [STD92] and the "which-jobs-supported" Printer Description attribute [PWG5100.7] to support filtering for Proof Jobs and Stored Jobs. Table 7 [lists the new values and their uses](#).

813 **Table 7 - Additional Keywords for "which-jobs" and "which-jobs-supported"**

Keyword	Description
'proof-print'	Proof Jobs, i.e., Jobs that have been submitted using the "proof-print" Job Template attribute and which are in the 'completed', 'canceled', or 'aborted' state. If the "proof-print" Job Template attribute is supported, this value MUST be supported.
'stored-public'	Public Stored Jobs, i.e., Jobs that have been stored using the "job-storage" Job Template attribute where the "job-storage-access" member attribute specifies 'public', and which are in the 'completed' state. If the "job-storage" Job Template attribute is supported, this value MUST be supported.
'stored-owner'	Private Stored Jobs, i.e., Jobs that have been stored using the "job-storage" Job Template attribute where the "job-storage-access" member attribute specifies 'owner', and which have reached the 'completed' state. If the "job-storage" Job Template attribute is supported, this value MUST be supported.

Formatted Table

Formatted: Font: Not Bold

Formatted: Font: Not Bold

Formatted: Font: Not Bold

814 A Client that specifies the 'stored-owner' keyword [for "which-jobs"](#) MUST be prepared [forto](#)  
 815 [handle](#) an authentication challenge from the Printer.

816 **9.3 job-state-reasons (1setOf type2 keyword) Job Description attribute**

817 This section adds additional keywords to the "job-cancel-after" attribute (section 6.1) in  
 818 support of the Job Storage Feature, [\(section 4.2\)](#), the ~~Password Protected~~ Job [Protection](#)  
 819 Feature, [\(section 4.3\)](#) and the [Job](#) Proof Print Feature: [\(section 4.4\)](#).

820 [Many of the existing "job-state-reasons" attribute values can apply to a 'save-only' Job as](#)  
 821 [well as a Job submitted for printing. If the value of the "job-storage-disposition" attribute is](#)  
 822 [store-only', the "job-state-reasons" attribute MAY be set with existing values such as 'job-](#)  
 823 [incoming', 'resources-are-not-ready' \(such as a font\), 'job-interpreting', and 'job-queued'.](#)  
 824 [Likewise, errors that occur on a Stored Job MAY have existing "job-state-reasons" attribute](#)  
 825 [values such as 'job-data-insufficient', 'document-access-error', 'submission-interrupted', 'job-](#)  
 826 [canceled-by-user', 'aborted-by-system', etc.](#)

827 [There are also new four new "job-state-reasons" keyword values REQUIRED that support a](#)  
 828 [Stored Job: 'job-storing', 'job-stored-successfully', 'job-stored-with-warnings', and 'job-](#)  
 829 [stored-with-errors'. The existing 'job-completed-successfully', 'job-completed-with-warnings',](#)  
 830 [and 'job-completed-with-errors' values are also clarified in the list above for implementations](#)  
 831 [that support the "job-save-disposition" Job Template attribute, in such a way that these](#)  
 832 [values remain compatible with Printers and Clients that do not support job saving. Table 8](#)  
 833 [defines the meanings of these 4 new "job-state-reasons" keywords.](#)

834

**Table 8 - Additional Keywords for "job-state-reasons"**

Keyword	Description
'job-canceled-after-timeout'	The Job was canceled because the timer with a duration specified by the "job-cancel-after" attribute (section 7.4) to the "job-state-reasons" Job Status attribute.
'job-awaiting-password'	The Job is in the 'pending-held' state awaiting a password to be entered to allow it to be released to processing.
'job-awaiting-proof-release'	The Job is in the 'processing-stopped' state following the printing of the first copy, awaiting a signal of approval to allow the remaining copies to be produced.
'job-password-timeout'	The Job is in the 'aborted' state being retained and stored by the Printer, ready to be duplicated to produce a new reprint Job.
'job-stored-successfully'	The job was successfully saved. The Printer MUST also supply 'job-completed-successfully', except when "job-storage-disposition" = 'store-only'. If the "job-storage" Job Template attribute is supported, this value MUST be supported.
'job-stored-with-errors'	The job did not save successfully (whether or not it was printed successfully, printed with warnings, printed with errors, or not printed). The Printer MUST ensure that none of the saved job is accessible, if it was unable to successfully save all of the job. If the "job-storage" Job Template attribute is supported, this value MUST be supported.
'job-stored-with-warnings'	The job was saved with warnings. If the "job-storage" Job Template attribute is supported, this value MUST be supported.
'job-storing'	The Printer is transmitting the job to the save location. This is similar to the 'job-printing' value. If the "job-storage" Job Template attribute is supported, this value MUST be supported.

§35 ~~Many of the existing "job-state-reasons" attribute values can apply to a 'save-only' Job as~~  
 §36 ~~well as a Job submitted for printing. If the value of the "job-storage-disposition" attribute is~~  
 §37 ~~store-only', the "job-state-reasons" attribute MAY be set with existing values such as 'job-~~  
 §38 ~~incoming', 'resources are not ready' (such as a font), 'job interpreting', and 'job queued'.~~  
 §39 ~~Likewise, errors that occur on a Stored Job MAY have existing "job-state-reasons" attribute~~  
 §40 ~~values such as 'job-data-insufficient', 'document-access-error', 'submission-interrupted', 'job-~~  
 §41 ~~canceled-by-user', 'aborted-by-system', etc.~~

There are also new four new "job-state-reasons" keyword values REQUIRED that support a Stored Job: 'job-storing', 'job-stored-successfully', 'job-stored-with-warnings', and 'job-stored-with-errors'. The existing 'job-completed-successfully', 'job-completed-with-warnings', and 'job-completed-with-errors' values are also clarified in the list above for implementations that support the "job-save-disposition" Job Template attribute, in such a way that these values remain compatible with Printers and Clients that do not support job saving. **Error! Reference source not found.** defines the meanings of these 4 new "job-state-reasons" keywords.

Table 9 enumerates the possible combinations of print and save success, warning, and error conditions. Note that two values occur only when there are print warnings/errors and a save error.

**Table 9 - Values of "job-state-reasons" attribute for various job conditions**

	Not storing	Store was successful	Store was unsuccessful
Not printing	<not possible>	'job-completed-successfully'	'job-stored-with-errors'
Print successful	'job-completed-successfully'	'job-completed-successfully'	'job-stored-with-errors'
Print warnings	'job-completed-with-warnings'	'job-completed-with-warnings'	'job-completed-with-warnings', 'job-stored-with-errors'
Print errors	'job-completed-with-errors'	'job-completed-with-errors'	'job-completed-with-errors', 'job-stored-with-errors'
Print warnings and errors	'job-completed-with-errors'	'job-completed-with-errors'	'job-completed-with-errors', 'job-stored-with-errors'

## 10. Obsolete Attributes and Values

### 10.1 Obsolete Attributes

Table 10 lists the attributes that are OBSOLETE.

**Table 10 - Obsolete Attributes**

Attribute	Explanation
<a href="#">job-save-disposition</a>	The Job Save and Reprint Feature [PWG5100.11] has been deprecated

[pages-per-subset](#) [Redundant with "job-pages-per-set" \[PWG5100.1\]](#)  
[sheet-collate](#)

**10.2 Obsolete Values**

Table 11 lists the values that are OBSOLETE.

**Table 11 - Obsolete Values**

Attribute	Value	Explanation
<a href="#">job-state-reasons</a>	' <a href="#">job-saved-successfully</a> '	<a href="#">The Job Save and Reprint Feature [PWG5100.11]</a> has been deprecated
<a href="#">job-state-reasons</a>	' <a href="#">job-saved-with-errors</a> '	<a href="#">The Job Save and Reprint Feature [PWG5100.11]</a> has been deprecated
<a href="#">job-state-reasons</a>	' <a href="#">job-saved-with-warnings</a> '	<a href="#">The Job Save and Reprint Feature [PWG5100.11]</a> has been deprecated
<a href="#">job-state-reasons</a>	' <a href="#">job-saving</a> '	<a href="#">The Job Save and Reprint Feature [PWG5100.11]</a> has been deprecated
<a href="#">which-jobs</a>	' <a href="#">saved</a> '	<a href="#">The Job Save and Reprint Feature [PWG5100.11]</a> has been deprecated

**10.11. Conformance Requirements**

This section summarizes the Conformance Requirements detailed in the definitions in this document for Client and Printer objects (servers or devices).

**10.11.1 Conformance Requirements for this specification**

In order for a client and a Printer to claim conformance to this IPP Enterprise Printer Extensions v2.0 Specification, a Client MUST be able to supply and a Printer MUST support the following:

- 1. ~~The Cancel-Jobs operation (section 5.4)~~

**Commented [KS&SA14]:** Not updated yet - want to finalize attributes first, then will update this

- 869 ~~2. The Cancel-My-Jobs operation (section 5.2)~~
- 870 ~~3. The Close-Job operation (section 5.3)~~
- 871 ~~4. The Resubmit-Job operation (section 5.4)~~
- 872 ~~5.1.~~ The "job-ids" Operation attribute (section 6.3) in the Get-Jobs operation  
873 [RFC2911] (section 3.2.6)
- 874 ~~6.2.~~ The "job-ids" Operation attribute (section 6.3) in the Purge-Jobs  
875 operation[RFC2911] (section 3.2.9), if Purge-Jobs operation is supported (section  
876 6.4)
- 877 ~~7.3.~~ The "proof-print" Job Template attribute (sections 7.11). See also section 12.5  
878 Conformance Requirements for the REQUIRED "proof-print" Job Template attribute
- 879 ~~8.4.~~ The "job-ids-supported" Printer Description attribute (section 10.2)
- 880 ~~9.5.~~ The "which-jobs-supported" Printer Description attribute (see section 10.9 for  
881 which values)
- 882 The other attributes defined in this specification are OPTIONAL for a client to be able to  
883 supply and for a Printer to support.

884 **10.211.2 Conditional Conformance Requirements for Printers**

885 The following conditional conformance requirements are defined:

If the Printer supports:	then the Printer MUST also support:
"job-hold-until-time" Job Template attribute in Job Creation operations	<ul style="list-style-type: none"> <li>• "job-hold-until" Job Template attribute ([STD92])</li> <li>• Hold-Job operation with the "job-hold-until" ([STD92]) and "job-hold-until-time" (section <b>Error! Reference source not found.</b>) Operation attributes</li> <li>• Release-Job operation [STD92].</li> </ul>
"job-delay-output-until-time" Job Template attribute in Job Creation operations	<ul style="list-style-type: none"> <li>• "job-delay-output-until" Job Template attribute (section 6.1)</li> <li>• Set-Job-Attributes operation (section <b>Error! Reference source not found.</b>)</li> </ul>
"job-delay-output-until" Job Template attribute in Job Creation operations	Set-Job-Attributes operation (section <b>Error! Reference source not found.</b> )

886

887

**888 41-12. Internationalization Considerations**

889 For interoperability and basic support for multiple languages, conforming implementations  
890 MUST support the Universal Character Set (UCS) Transformation Format -- 8 bit (UTF-8)  
891 [RFC3629] encoding of Unicode [UNICODE] [ISO10646] and the Unicode Format for  
892 Network Interchange [RFC5198].

893 Implementations of this specification SHOULD conform to the following standards on  
894 processing of human-readable Unicode text strings, see:

- 895 • Unicode Bidirectional Algorithm [UAX9] – left-to-right, right-to-left, and vertical
- 896 • Unicode Line Breaking Algorithm [UAX14] – character classes and wrapping
- 897 • Unicode Normalization Forms [UAX15] – especially NFC for [RFC 5198]
- 898 • Unicode Text Segmentation [UAX29] – grapheme clusters, words, sentences
- 899 • Unicode Identifier and Pattern Syntax [UAX31] – identifier use and normalization
- 900 • Unicode Collation Algorithm [UTS10] – sorting
- 901 • Unicode Locale Data Markup Language [UTS35] – locale databases

902 Implementations of this specification are advised to also review the following informational  
903 documents on processing of human-readable Unicode text strings:

- 904 • Unicode Character Encoding Model [UTR17] – multi-layer character model
- 905 • Unicode in XML and other Markup Languages [UTR20] – XML usage
- 906 • Unicode Character Property Model [UTR23] – character properties
- 907 • Unicode Conformance Model [UTR33] – Unicode conformance basis

**908 42-13. Security Considerations**

909 In addition to the security considerations described in the IPP/1.1: Model and Semantics  
910 [STD92], implementations of this specification SHOULD conform to the following standards  
911 on processing of human-readable Unicode text strings:

- 912 • Unicode Security Mechanisms [UTS39] – detecting and avoiding security attacks
- 913 • Unicode Security FAQ [UNISECFAQ] – common Unicode security issues

914 **13.14. IANA Considerations**915 **13.14.1.1 IPP Attribute and Keyword Value Registrations**

916 This section contains the exact registration information for IANA to update according to the  
 917 procedures defined in [STD92].

918 The registry entries will contain the following information:

919	Job Template attributes:	Reference
920	-----	-----
921	job-cancel-after (integer(1:MAX))	[IPPEPE]
922	job-phone-number (uri)	[IPPEPE]
923	job-recipient-name (name(MAX))	[IPPEPE]
924	job-storage (collection)	[IPPEPE]
925	job-storage-access (type2 keyword)	[IPPEPE]
926	job-storage-disposition (type2 keyword)	[IPPEPE]
927	job-storage-group (name(MAX))	[IPPEPE]
928	<del>  storage-access (type2 keyword)</del>	<del>[IPPEPE]</del>
929	proof-print (collection)	[IPPEPE]
930	media (type2 keyword   name(MAX))	[IPPEPE]
931	media-col (collection)	[IPPEPE]
932	proof-print-copies (integer (0:MAX))	[IPPEPE]
933		
934		
935	Operation attributes:	Reference
936	-----	-----
937	job-password (octetString(255))	[IPPEPE]
938	job-password-action (type2 keyword)	[IPPEPE]
939	job-password-encryption (type2 keyword   name(MAX))	[IPPEPE]
940		
941		
942	Job Status attributes:	Reference
943	-----	-----
944	<del>job-save-printer-make-and-model (text(127))</del> <u>storage (collection)</u>	
945	[IPPEPE]	
946		
947		
948	Printer Description attributes:	Reference
949	-----	-----
950	job-cancel-after-default (integer(1:MAX))	[IPPEPE]
951	job-password-action-supported (1setOf (type2 keyword))	[IPPEPE]
952	job-password-encryption-supported (1setOf (type2 keyword   name(MAX)))	[IPPEPE]
953	job-password-repertoire-configured (1setOf (type2 keyword   name(MAX)))	[IPPEPE]
954	job-password-repertoire-supported (1setOf (type2 keyword   name(MAX)))	[IPPEPE]
955	job-password-supported (integer(0:255))	[IPPEPE]
956	job-phone-number-default (uri)	[IPPEPE]
957	job-phone-number-supported (boolean)	[IPPEPE]
958	job-print-password-supported (octetString(256))	[IPPEPE]
959	job-print-password-encryption-supported (type2 keyword)	[IPPEPE]
960	job-print-password-repertoire-supported (type2 keyword)	[IPPEPE]
961	job-recipient-name-default (name(MAX))	[IPPEPE]
962	job-recipient-name-supported (boolean)	[IPPEPE]
963	printer-detailed-status-messages (1setOf text(MAX))	[IPPEPE]
964	proof-print-default (collection)	[IPPEPE]
965	proof-print-supported (1setOf type2 keyword)	[IPPEPE]
966	<u>proof-print-copies-supported (rangeOfInteger(0:MAX))</u>	<u>[IPPEPE]</u>
967	<u>proof-print-password-supported (1setOf type2 keyword)</u>	
968	[IPPEPE]	

```

969 save-disposition-supported (1setOf (type2 keyword)) [IPPEPE]
970 save-document-format-default (mimeMediaType) [IPPEPE]
971 save-document-format-supported (1setOf mimeMediaType) [IPPEPE]
972 save-location-default (uri) [IPPEPE]
973 save-location-supported (1setOf uri) [IPPEPE]
974 save-name-subdirectory-supported (boolean) [IPPEPE]
975 save-name-supported (boolean) [IPPEPE]
976 which-jobs-supported (1setOf type2 keyword) [IPPEPE]

```

### 977 **13.214.2 Attribute Value Registrations**

978 The attributes defined in this specification will be published by IANA according to the  
979 procedures in IPP/1.1 Model and Semantics [STD92] section 7.1 in the following file:

980 <http://www.iana.org/assignments/ipp-registrations>

981 The registry entries will contain the following information:

982 Attribute (attribute syntax)	Reference
983 Keyword Attribute Value	-----
984 -----	-----
985 job-hold-until (type2 keyword)	[IPPEPE]
986 job-hold-until-supported (1setOf (type2 keyword))	[IPPEPE]
987 owner-authorized	[IPPEPE]
988 button-press	[IPPEPE]
989	
990 job-password-action (type2 keyword)	[IPPEPE]
991 job-password-action-supported (1setOf (type2 keyword))	[IPPEPE]
992 hold-job	[IPPEPE]
993 process-and-retain	[IPPEPE]
994 retain-only	[IPPEPE]
995	
996 job-password-encryption (type2 keyword   name(MAX))	[IPPEPE]
997 job-password-encryption-supported (1setOf (type2 keyword   name(MAX)))	[IPPEPE]
998 md2	[IPPEPE]
999 md4	[IPPEPE]
1000 md5	[IPPEPE]
1001 none	[IPPEPE]
1002 sha	[IPPEPE]
1003 sha2-224	[IPPEPE]
1004 sha2-256	[IPPEPE]
1005 sha2-384	[IPPEPE]
1006 sha2-512	[IPPEPE]
1007 sha2-512_224	[IPPEPE]
1008 sha2-512_256	[IPPEPE]
1009 sha3-224	[IPPEPE]
1010 sha3-256	[IPPEPE]
1011 sha3-384	[IPPEPE]
1012 sha3-512	[IPPEPE]
1013 sha3-512_224	[IPPEPE]
1014 sha3-512_256	[IPPEPE]
1015 shake-256	[IPPEPE]
1016 shake-512	[IPPEPE]
1017	
1018 job-save-disposition-supported (1setOf type2 keyword)	[IPPEPE]
1019 save-disposition	[IPPEPE]
1020 save-info	[IPPEPE]
1021	
1022 job-spooling-supported (type2 keyword)	[IPPEPE]

1023	automatic	[IPPEPE]
1024	spool	[IPPEPE]
1025	stream	[IPPEPE]
1026		
1027	job-state-reasons (type2 keyword)	[IPPEPE]
1028	job-delay-output-until-specified	[IPPEPE]
1029	job-password-wait	[IPPEPE]
1030	job-printed-successfully	[IPPEPE]
1031	job-printed-with-errors	[IPPEPE]
1032	job-printed-with-warnings	[IPPEPE]
1033	job-resuming	[IPPEPE]
1034	job-retain-until-specified	[IPPEPE]
1035	job-saved-successfully	[IPPEPE]
1036	job-saved-with-errors	[IPPEPE]
1037	job-saved-with-warnings	[IPPEPE]
1038	job-saving	[IPPEPE]
1039	job-spooling	[IPPEPE]
1040	job-streaming	[IPPEPE]
1041	job-suspended-by-operator	[IPPEPE]
1042	job-suspended-by-system	[IPPEPE]
1043	job-suspended-by-user	[IPPEPE]
1044	job-suspending	[IPPEPE]
1045		
1046	job-storage-supported (type2 keyword)	[IPPEPE]
1047	job-storage-access	[IPPEPE]
1048	job-storage-disposition	[IPPEPE]
1049	job-storage-group	[IPPEPE]
1050		
1051	proof-print-supported (1setOf type2 keyword)	[IPPEPE]
1052	media	[IPPEPE]
1053	media-col	[IPPEPE]
1054	proof-print-copies	[IPPEPE]
1055		
1056	which-jobs (type2 keyword)	[IPPEPE]
1057	proof-print	[IPPEPE]
1058	stored	[IPPEPE]

## 1196 **16-17. Change History**

### 1197 **17.1 September 3, 2019**

1198 [Updated as per feedback from the July 18 IPP Workgroup teleconference review and other feedback:](#)

- 1200 • [Added version number \("v2.0"\) to title and name](#)
- 1201 • [Updated abstract and other references to use new feature names](#)
- 1202 • [Restored IPP Proof Print from 5100.11 and "rebranded" it as the Job Proof Print Feature in this document. Abandoned the proposed new Proof Print feature from HP.](#)

- 1204 • [Removed the "| name\(MAX\)" from the syntax definition for job-password-encryption,](#)
- 1205 [since site-defined localized strings in that context would seem to be unlikely and of](#)
- 1206 [limited value](#)
  
- 1207 • [Added "job-pause-after" and then questioned whether we ought to be adding it](#)
  
- 1208 • [Added a MAY statement allowing "job-password" to be used with "proof-print", with](#)
- 1209 [corresponding conditional requirements, so that the Job Proof Print Feature and Job](#)
- 1210 [Protection Feature can be used with a single Job to make a Protected Proof Print](#)
- 1211 [Job.](#)
  
- 1212 • [Added "proof-print-password-supported" and "proof-print-copies-supported"](#)
  
- 1213 • [Various questions still to be resolved are in comments](#)

1214 **[16.117.2](#) June 14, 2019**

1215 Updated to resolve issues identified in the April 2019 PWG F2F and to align with IPP Job  
1216 Extensions v2.0.

1217 **[16.217.3](#) March 27, 2019**

1218 Initial revision based on an abandoned update to JPS2v2 and discussions on the IPP WG  
1219 reflector.
