Abstract: This specification defines extensions to IPP/1.1 [STD92] to support the IPP Job Proof Print Feature, Job Storage Feature and Job Protection Feature, to better enable authenticated release workflows that are used in institutional IT environments such as corporate businesses, governments or universities.

However, this document itself may not be modified in any way, such as by removing the copyright notice or references to the IEEE-ISTO and the Printer Working Group, a program of the IEEE-ISTO.

Title: **IPP Enterprise Printer Extensions v2.0 (EPX)**

The IEEE-ISTO and the Printer Working Group DISCLAIM ANY AND ALL WARRANTIES, WHETHER EXPRESS OR IMPLIED INCLUDING (WITHOUT LIMITATION) ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

The Printer Working Group, a program of the IEEE-ISTO, reserves the right to make changes to the document without further notice. The document may be updated, replaced or made obsolete by other documents at any time.

The IEEE-ISTO takes no position regarding the validity or scope of any intellectual property or other rights that might be claimed to pertain to the implementation or use of the technology described in this document or the extent to which any license under such rights might or might not be available; neither does it represent that it has made any effort to identify any such rights.

The IEEE-ISTO invites any interested party to bring to its attention any copyrights, patents, or patent applications, or other proprietary rights which may cover technology that may be required to implement the contents of this document. The IEEE-ISTO and its programs shall not be responsible for identifying patents for which a license may be required by a document and/or IEEE-ISTO Industry Group Standard or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention. Inquiries may be submitted to the IEEE-ISTO by e-mail at: ieee-isto@ieee.org.

The Printer Working Group acknowledges that the IEEE-ISTO (acting itself or through its designees) is, and shall at all times, be the sole entity that may authorize the use of certification marks, trademarks, or other special designations to indicate compliance with these materials.

Use of this document is wholly voluntary. The existence of this document does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to its scope.
About the IEEE-ISTO

The IEEE-ISTO is a not-for-profit corporation offering industry groups an innovative and flexible operational forum and support services. The IEEE-ISTO provides a forum not only to develop standards, but also to facilitate activities that support the implementation and acceptance of standards in the marketplace. The organization is affiliated with the IEEE (http://www.ieee.org/) and the IEEE Standards Association (http://standards.ieee.org/).

For additional information regarding the IEEE-ISTO and its industry programs visit:

http://www.ieee-isto.org

About the IEEE-ISTO PWG

The Printer Working Group (or PWG) is a Program of the IEEE Industry Standards and Technology Organization (ISTO) with member organizations including printer manufacturers, print server developers, operating system providers, network operating system providers, network connectivity vendors, and print management application developers. The group is chartered to make printers and the applications and operating systems supporting them work together better. All references to the PWG in this document implicitly mean “The Printer Working Group, a Program of the IEEE ISTO.” In order to meet this objective, the PWG will document the results of their work as open standards that define print related protocols, interfaces, procedures and conventions. Printer manufacturers and vendors of printer related software will benefit from the interoperability provided by voluntary conformance to these standards.

In general, a PWG standard is a specification that is stable, well understood, and is technically competent, has multiple, independent and interoperable implementations with substantial operational experience, and enjoys significant public support.

1. Introduction

This specification defines extensions to IPP/1.1 [STD92] to support the IPP Proof Job Feature, Job Storage Feature and Job Protection Feature, to better enable authenticated release workflows that are used in institutional IT environments such as corporate businesses or universities.

The Proof Print, Job Save and Secure Print features defined in "Internet Printing Protocol (IPP): Job and Printer Extensions – Set 2 (JPS2)" [PWG5100.11] were not interoperable with one another, and were not defined in such a way that they could interoperate in practice. The Proof Print and Job Save features are deprecated, to be replaced by Job Proof Print Feature and Job Storage Feature. The Secure Print feature has been refactored and extended to become the Job Protection Feature, which can interoperate with the Job Proof Print Feature and Job Storage Feature to enable more complex print workflow solutions to be created.

2. Terminology

This section defines the following additional terms that are used throughout this document.

2.1 Conformance Terminology

Capitalized terms, such as MUST, MUST NOT, RECOMMENDED, REQUIRED, SHOULD, SHOULD NOT, MAY, and OPTIONAL, have special meaning relating to conformance as defined in Key words for use in RFCs to Indicate Requirement Levels [BCP14]. The term CONDITIONALLY REQUIRED is additionally defined for a conformance requirement that applies when a specified condition is true.

2.2 Printing Terminology

Normative definitions and semantics of printing terms are imported from IETF Printer MIB v2 [RFC3805], IETF Finisher MIB [RFC3806], and IETF Internet Printing Protocol/1.1: Model and Semantics [STD92].

Document: An object created and managed by a Printer that contains the description, processing, and status information. A Document object may have attached data and is bound to a single Job.

Job: An object created and managed by a Printer that contains description, processing, and status information. The Job also contains zero or more Document objects.

Logical Device: a print server, software service, or gateway that processes Jobs and either forwards or stores the processed Job or uses one or more Physical Devices to render output.

Output Device: a single Logical or Physical Device
253 Physical Device: a hardware implementation of an endpoint device, e.g., a marking engine, a fax modem, etc.

255 **2.3 Protocol Role Terminology**

256 This document also defines the following protocol roles in order to specify unambiguous conformance requirements:

258 **Client**: Initiator of outgoing connections and sender of outgoing operation requests (Hypertext Transfer Protocol -- HTTP/1.1 [RFC7230] User Agent).

260 **Printer**: Listener for incoming connections and receiver of incoming operation requests (Hypertext Transfer Protocol -- HTTP/1.1 [RFC7230] Server) that represents one or more Physical Devices or a Logical Device.

263 **2.4 Job State Terminology**

264 This document defines features that influence the trajectory of a Job through the various Job states. The states defined for "job-state" [STD92] and the transitions between these states are illustrated in Figure 1. **THIS SUB-SECTION SHOULD BE REMOVED BEFORE FINAL PUBLICATION.**

268 **Job Not Completed**: The phase when a Job is in the 'pending', 'pending-held', 'processing', or 'processing-stopped' state.

270 **Job Retention**: The phase when a Job is in its terminal state ('canceled', 'aborted', or 'completed') before it has been stripped of its Document data.

272 **Job History**: After the Job Retention phase expires for a Job, the Printer deletes the Document data for the Job and the Job becomes part of the Job History. The Printer MAY also delete any number of the Job attributes.

275 **Job Removal**: After the Job has remained in the Job History for an implementation-defined time, such as when the number of Jobs exceeds a fixed number or after a fixed time period (which MAY be zero seconds), the IPP Printer removes the Job from the system.

278 **'pending'**: The Job is a candidate to start processing but is not yet processing.

279 **'pending-held'**: The Job is not a candidate for processing for any number of reasons but will return to the 'pending' state as soon as the reasons are no longer present.

281 **'processing'**: One or more of the following: (1) the Job is using, or is attempting to use, one or more purely software processes that are analyzing, creating, or interpreting a PDL, etc.; (2) the Job is using, or is attempting to use, one or more hardware devices that are interpreting a PDL; making marks on a medium; and/or performing finishing, such as stapling, etc.; (3) the Printer has made the Job ready for printing, but the Output Device is
not yet printing it, either because the Job hasn't reached the Output Device or because the
Job is queued in the Output Device or some other spooler, waiting for the Output Device to
print it.

'processing-stopped': The Job has stopped while processing for any number of reasons and
will return to the 'processing' state as soon as the reasons are no longer present.

canceled': The Job has been canceled by a User-initiated action such as a Cancel-Job
operation or some non-IPP method, the Printer has completed canceling the Job, and all
Job Status attributes have reached their final values for the Job.

'aborted': The Job has been aborted by the system, usually while the Job was in the
'processing' or 'processing-stopped' state, the Printer has completed aborting the Job, and
all Job Status attributes have reached their final values for the Job.

'completed': The Job has completed successfully or with warnings or errors after processing,
all of the Job Media Sheets have been successfully stacked in the appropriate output bin(s),
and all Job Status attributes have reached their final values for the Job.
Figure 1 - IPP Job States and Transitions
2.5 Other Terminology

*Document Creation Operations*: The operations that create Document objects: Print-Job, Print-URI, Send-Document and Sent-URI [STD92].

*Input Page*: A page according to the definition of "pages" in the language used to express the Document data [STD92].

*Job Creation operation*: One of the operations that creates a Job object: Print-Job, Print-URI and Create-Job. The Restart-Job operation [STD92] is not considered a Job Creation operation, since the Printer re-uses the existing Job object. The Validate-Job operation is not considered a Job Creation operation because no Job object is created. Therefore, when a statement also applies to either the Restart-Job and/or the Validate-Job operation, they are mentioned explicitly.

*Job Instructions*: Information that affects how the Job and its associated documents are to be processed. This includes the Job Template Attributes, some Operation Request Attributes, and other attributes (such as defaults) that are applied to a job.

*Job Submission Operations*: The Job Submission Operations are the IPP operations that create Jobs and Documents: Print-Job, Print-URI, Create-Job, Send-Document and Send-URI [STD92].

*Password Protected Job*: The Job that has a password permanently attached to it that must be provided to the Printer to authorize its printing. If the Job is duplicated, either via an IPP Reprocess-Job or Resubmit-Job operation, or out of band of IPP via control panel-initiated reprinting or some other method, the password is included in the new Job to require authorization for the new Job.

*Precedence*: The specification of the order or ranking of a series of instructions or attributes from multiple sources referring to the same functionality. See section 4.2 of this specification for a description of the Attribute Precedence model.

*Production Printer*: A Printer that produces large quantities of high-quality output, that often requires operator participation to make decisions as to the choice of job and its parameters.

*Proof Job*: A Retained Job that the Printer retains (until removed by a Delete-Job or Purge-Jobs operation or aged out by the Printer using a different policy than for ordinary completed Jobs) after printing a proof so that a copy of it can be printed any time after it has been proofed using the Reprocess-Job or Resubmit-Job operations, rather than aging the job out after an implementation-defined period.

*Raster image*: A binary bitmap representation of an image.

*Retained Job*: A Job that the Printer retains in the so-called Job Retention Phase (see [STD92] section 5.3.7.2 Partitioning of Job States) in the Job’s terminal state ('completed', 'aborted', or 'canceled') after processing it, for an implementation-defined period (including
zero seconds). An exact copy of a Retained Job can be created using a Reprocess-Job operation. A modifiable copy of a Retained Job can be created using a Resubmit-Job operation.

341 *RIP*: Raster Image Processor - a page description language interpreter.

342 *Stored Job*: A Retained Job that has reached the 'completed' state and that has identifying characteristics marking it as a Stored Job instead of simply as a previously processed Job.

344 The Documents in a Stored Job are maintained in their originally submitted state and format.

345 The Printer retains a Stored Job indefinitely, unless otherwise configured, so that it can be listed and selected for reprinting at some time in the future.

### 2.6 Acronyms and Organizations

348 *IANA*: Internet Assigned Numbers Authority, [http://www.iana.org/](http://www.iana.org/)

### 3. Requirements

#### 3.1 Rationale for IPP Enterprise Printer Extensions v2.0

354 IETF and PWG IPP printing standards define an abstract model of a Print Service (i.e., ISO DPA Logical Printer) and a Print Device (i.e., ISO DPA Physical Printer) in section 3.1 of IETF IPP/1.1 [STD92]. Some IPP Printers already support proofing, saving, and reprinting of large Print Jobs via vendor proprietary operations and attributes.

358 Therefore, this IPP Enterprise Printer Extensions v2.0 specification should:

359 1. Support Proof Jobs using IPP Job Creation operations;

360 2. Support Stored Jobs using IPP Job Creation operations;

361 3. Support creating new Jobs from stored or proofed Jobs, with possibly different processing instructions;

363 4. Support Password Protected Jobs using IPP Job Creation operations;

364 5. Support interoperability between Proof Jobs, Stored Jobs and Password Protected Jobs such that a single Job can be any combination of the 3 including all 3 (e.g. a "Password Protected Stored Proof Job").
3.2 Use Cases

3.2.1 Job Protection Via a Job Password

Frank works in a sales office that is large enough for him to have privacy concerns, but not so large that the printers are integrated into the IT infrastructure in a sophisticated manner. He is editing a sensitive business report that contains financial data. He wants to make sure that, if he prints it to the office's workgroup printer, he can be confident only people with the original password can pick it up or re-print it. Frank sees that the workgroup printer supports Password Protected Jobs, so he specifies a "Job Password" when he prints it. The workgroup printer delays printing the Job until someone first provides the matching password. Frank goes to the workgroup printer, observes that his Password Protected Job is listed on the control panel, selects it, and enters the job's password at the prompt. The printer prints the Password Protected Job, and Frank can relax knowing the printed Job was safe from others' view.

3.2.2 Job Protection Via User Authentication

James works in a large law office where the printers are integrated into the IT AAA infrastructure. He is editing a set of documents for a client. He wants to make sure that, if he prints it to the office's workgroup printer, he can be confident he will be the only one that will be able to pick it up or re-print it. The workgroup printer supports Authenticated Job Release, so James selects "Authenticated Release" when he prints it. The Printer challenges James' laptop for authentication credentials, and James provides them to the Client. workgroup printer waits to print the Job until someone has provide the matching password. Frank goes to the workgroup printer, finds the held job, enters the matching password at the prompt, and the Job is printed.

3.2.3 Job Storage

Vincent is an administrative assistant for a school. The school provides its teachers with paper forms for documenting their class assignments and attendance. Vincent makes these forms available on the school's web site and also on the school's workgroup printer as a Stored Job accessible by any accounts in the Faculty user group. He sends an email to the school faculty letting them know that the Stored Job is available for reprinting.

Lily is a teacher. She has run out of her supply of the assignment tracking form. She goes to the school's office, logs in using her faculty account, and selects Stored Jobs. Among the Jobs visible to her account, she finds and chooses the assignment tracking form from the workgroup printer's Stored Jobs list on its control panel, chooses to have 30 copies made, and taps Print. The copies are printed, and she returns to her classroom.

3.2.4 Proof Print

Alice, Bob, and Charlie work in the system engineering department of a large software vendor. They collaborate to find, describe, and evaluate software feature requirements for financial management tools in their requirements database.
Alice is an artist and chooses their standard fonts and writes style sheets and layout guides for their software requirements specifications. Bob is a quiet, steady worker and an excellent proofreader. Charlie is a good talker who does the interviewing of the marketers and engineers.

Once a month, Charlie extracts from their database all of the detailed software requirements for each project into a spreadsheet. He also extracts all the high-level software requirements into a word processing document. Charlie then submits a single Print Job with two Documents [PWG5100.5] (the spreadsheet and the word processing document) for a proof print of 3 copies (single-sided and portrait).

Alice searches for layout and visual content errors, while Bob looks for typos and missing words. Charlie commits their fixes to the database, regenerates the source documents, and does another cycle of proof print.

Finally, Charlie wants to produce 60 copies (2-up, two-sided, and landscape) of the retained proof Print Job. So, he reprints the saved Print Job (without sending the document data again) but specifying overrides of some processing instructions.

### 3.3 Exceptions

#### 3.3.1 Unauthorized Access Job Protection Using a Job Password

Velma is one of Frank's co-workers. She is very competitive and also has questionable business ethics. She goes to the department's workgroup printer to see if she can re-print any of Frank's reports. She finds his latest draft report and tries to re-print it. The Job Velma selected is a Password Protected Job. The workgroup printer presents a password challenge UI to request the Job Password. Velma doesn't know it, so she clicks "Cancel" and goes to the break room to brood.

### 3.4 Out of Scope

The following are considered out of scope for this document:

1. How the Printer manages its storage for stored jobs or pending jobs
2. How the Printer implements authentication and authorization

### 3.5 Design Requirements

This IPP Enterprise Printer Extensions v2.0 design should:

1. Follow the naming conventions defined in IETF IPP/1.1 [STD92], including keyword value (lowercase) and hyphenation requirements;
2. Optimize compatibility with existing IETF and PWG IPP operations when making design decisions in defining new operations and attributes;
(3) Define new attributes in support of the Job Protection Feature;

(4) Define new attributes in support of the Job Storage feature;

(5) Define new attributes in support of the Job Proof Print Feature;

(6) Define additional attributes.
4. Semantics Common to More Than One Attribute

4.1 Overview

4.2 Authenticated Release Feature

The Authenticated Release Feature enables a Client to provide authentication credentials at Job Creation Time, and request that the Job be held by the Printer until matching credentials are provided at the Printer to authorize the Job's release.

This feature provides functionality similar to the Job Protection Feature (section 4.4). It differs mainly in the nature of the credential used to release the Job; whereas the Job Protection Feature uses a "job password", this feature uses user credentials to release the Job to processing. The Client uses this feature by specifying "job-hold-until" = 'owner-authorized'.

4.3 Job Storage Feature

The Job Storage Feature enables a Client to "store" a Job and its Documents in their originally submitted and unprocessed form to make it available for reprinting at a later time. A Stored Job's discoverability will depend on its access settings; it might be discoverable to all users, to only the originating user, or to users that are part of a particular group. A Client requests a Job be treated as a Stored Job by supplying the "job-storage" Job Template attribute (section 6.5) when submitting the Job Creation operation.

As with the Job Save and Reprint Feature, the Printer retains the Job indefinitely in the Job Retention Phase (see [STD92] section 5.3.7.2 "Partitioning of Job States") in the Job's terminal state ('completed', 'aborted', or 'canceled') after processing it, rather than aging the Job out after an implementation-defined period.

4.3.1 Creating Stored Jobs

A Job becomes a Stored Job when the "job-storage" Job Template attribute is specified in the Job Creation operation, and that Job has reached the 'completed' state.

4.3.2 Identifying and Listing Stored Jobs

A Job is a Stored Job if its "job-state-reasons" Job Status attribute includes one of the keywords for the Job Storage Feature defined in section . A Client can get a listing of Stored Jobs by specifying either the 'stored-public' or 'stored-owner' keyword for the "which-jobs" attribute (section 10.1) in a Get-Jobs operation request [STD92].

4.3.3 Reprinting Stored Jobs

There are two methods defined to reprint a copy of the Saved Job: using the Resubmit-Job operation [PWG5100.7]; and by direct interaction with the Printer's control panel. The Reprocess-Job operation [RFC3998] has been deprecated.
4.3.3.1 Reprinting Stored Jobs using the Resubmit-Job operation

The Resubmit-Job operation [PWG5100.7] re-processes a copy of any Retained Job with the ability to supply additional operation and Job Template attributes that will affect the processing of that copy of the Job by either overriding the values of existing attributes or providing additional attributes. The Resubmit-Job operation has the same structure as the Print-URI operation (see [STD92] section 4.2.2) except that the “job-id” (integer(1:MAX)) operation attribute MUST take the place of the “document-uri” (uri) operation attribute.

4.3.3.2 Reprinting Stored Jobs using the Printer Control Panel

Stored Jobs can be reprinted using the Printer's control panel (control console). The details of the user experience and presentation are beyond the scope of this document, but ought to reflect the semantics of the Job Storage feature defined in this IPP Enterprise Printer Extensions v2.0 specification.

4.4 Job Protection Feature

The Job Protection Feature enables a User to protect a Job with a password that is required for authorizing printing or reprinting the Job. A Client requests a Job be treated as a Password Protected Job by supplying the "job-password", "job-password-action" and "job-password-encryption" Job Template attributes (sections 5.1, 5.2, and 5.3) when submitting the Job Creation operation.

The password is permanently attached to the Job and persists with the Job until it enters the Job History phase [STD92]. If the Job is copied, as in the case of reprinting a Stored Job, the password is preserved in the new copy. This feature can be combined with the Job Storage Feature and/or the Job Proof Print Feature.

4.5 Job Proof Print Feature

The Job Proof Print Feature enables a User to print a Proof Job and to save it as part of job processing in such a way that users can submit a request to print a copy of the Proof Job at a later time. A Client requests a Printer to print and save a Proof Job by supplying the "proof-print" Job Template attribute (section 6.6) when submitting the job. In this case, the Printer retains the Proof Job indefinitely in the so-called Job Retention Phase (see [STD92] section 5.3.7.2 Partitioning of Job Sates) in the job’s terminal state (‘completed’, ‘aborted’, or ‘canceled’) after processing it, rather than aging the job out after an implementation-defined period. In other words, a Proof Job is just a Retained Job that the Printer is retaining indefinitely. A Client can then request the Printer to reprint a copy of the Proof Job using the Resubmit-Job operation [PWG5100.7]. See section 12.5 Conformance Requirements for the REQUIRED "proof-print" Job Template attribute for additional conformance requirements for Clients and Printers.
5. New Operation Attributes for Existing Operations

This section defines additional Operation attributes for existing IPP operations.

5.1 job-password (octetString(255)) for Job Creation operations

This operation attribute allows a User to specify a password for that Job, causing the Job to become a Password Protected Job. The Printer will only print a Password Protected Job after the same password value has been entered into the Printer's control panel.

The Client encrypts the password acquired by the job submitting application using one of the methods specified by the "job-password-encryption-supported" attribute. The encrypted password value is sent to the Printer as the value of the "job-password" attribute. If a "job-password" value is provided, other than a zero-length string, the Printer MUST disposition the Job according to the "job-password-action" operation attribute; if the "job-password-action" attribute is absent, the Printer MUST put the Job in the 'pending-held' state and add the 'job-password-wait' value to the Job's "job-state-reasons" attribute.

The Printer uses the same encryption method specified in the "job-password-encryption" attribute on this password. When the locally supplied encrypted password matches the value of the Job's "job-password" attribute, the Job removes the 'job-password-wait' value from its "job-state-reasons" attribute to indicate that that condition is no longer preventing processing. The method in which the password is entered and validated at the Printer is implementation dependent. If the Password Protected Job is released by the User while another Job is printing, the Password Protected Job SHOULD be the next Job printed after the current Job, unless the Printer has another Job which has a higher priority than the Password Protected Job as determined by the "job-priority" attribute.

This Operation attribute may OPTIONALLY be included in the request of the following Job Creation operations: Print-Job, Print-URI, and Create-Job.

The "job-password" attribute value MUST NOT be returned in a Get-Job-Attributes response or be provided via any non-IPP protocol.

The Job MUST preserve its "job-password" attribute, if it has one, for its entire lifespan. If a copy of a Job is created by a Resubmit-Job operation or via some mechanism out-of-band of IPP, the new copy MUST have a copy of the "job-password" attribute so that that new copy is also a Password Protected Job.

5.2 job-password-action (type2 keyword)

The "job-password-action" operation attribute specifies how a Job is processed when the "job-password" operation attribute (section 5.1) is included in a Job Creation request. If the Client supplies the "job-password" attribute but does not supply the "job-password-action" attribute, the Client and the Printer MUST assume the value is 'hold-job', to preserve backward compatibility with the earlier definition of "job-password" [PWG5100.11]. The
value specified by this operation attribute MUST be one of the values specified by the Printer's "job-password-action-supported" attribute (section 8.3).

Standard keyword values include:

- 'hold-job': The Job is placed in the 'pending-held' state and is released when the "job-password" value is entered at the Printer's console. The Job MUST NOT be retained once it has reached its terminal state ('completed', 'aborted' or 'canceled'). This is the semantic originally specified for the "job-password" operation attribute (section 5.1).

- 'process-and-retain': The Job is placed in the 'pending' state and it scheduled for processing without waiting for the User to enter the "job-password" value at the Printer's console.

- 'retain-only': The Job is placed in the 'completed' state as soon as all Documents are received by the Printer. The Printer will require a matching password for all reprints.

Once in a terminating state, the Job is retained according to the current value of its "job-retain-until-xxx" attributes.

5.3 job-password-encryption (type2 keyword) for Job Creation operations

The "job-password-encryption" Operation attribute specifies the type of encryption used to create the value specified by the "job-password" operation attribute in the request of the following Job Creation operations: Print-Job, Print-URI, and Create-Job. The Client MUST supply this operation attribute whenever the "job-password" attribute is supplied. The value MUST be one of the values specified in the Printer's "job-password-encryption-supported" attribute (section 8.3).

6. Job Template Attributes

Job Template attributes describe job processing behavior and conform to a set of rules. See [STD92] for the complete text of the rules that apply to each Job Template attribute called "xxx".

6.1 job-cancel-after (integer(1:MAX))

This Job Template attribute specifies the maximum number of seconds that are allowed for processing a Job. The cancel timer does not begin until the Job enters the 'processing' state. If the Job is canceled because of this timer, the Printer MUST add the 'job-canceled-after-timeout' keyword to the "job-state-reasons" Job Status attribute (section 10.3).
6.2 job-pause-after (integer(1:MAX))

This Job Template attribute specifies after how many pages the Printer should pause processing a Job.

6.3 job-phone-number (uri)

This Job Template attribute contains the contact telephone number for the Job. If supported, the Printer MUST accept the ‘tel:’ URI scheme [RFC2806] and MAY accept other schemes, such as the ‘fax:’ scheme [RFC2806]. Any processing by the Printer of the “job-phone-number” attribute is implementation-dependent.

6.4 job-recipient-name (name(MAX))

This Job Template attribute contains the name of the person that is to receive the output of the Job. The value of the "job-recipient-name" attribute is commonly printed on job sheets printed with the job. An example of another use of the "job-recipient-name" attribute is if the Printer accesses a database to get job delivery instructions for the recipient of a job. A zero-length value indicates that there is no job recipient name.

If the Client omits this attribute in a Job Creation request, the Printer MAY use the "job-recipient-name-default" attribute value, unless it has not been configured by the administrator, or MAY use the “authenticated user” name (see [MOD1.1] section 8.3), depending on implementation.

6.5 job-storage (collection)

The "job-storage" Job Template attribute is a collection whose members specify how a Printer processes a Job to become a Stored Job. See section 4.2 for a full description of the Job Storage Feature.

This attribute MAY be used with the "job-password" attribute for a Password Protected Job that is also a Stored Job.

6.5.1 job-storage-access (type2 keyword)

The "job-storage-access" member attribute specifies the access restrictions on the Stored Job. The value MUST be one of the keywords specified by the Printer's "job-storage-access-supported" Printer Description attribute (section 8.14). The "job-storage-access" member attribute MUST be preserved by the Job as a member of the "job-storage" Job Status attribute (section 7.1).
6.5.2 job-storage-disposition (type2 keyword)

The "job-storage-disposition" member attribute specifies how the Job is to be handled by the Printer during the 'processing' state. The value MUST be one of the values specified by the Printer's "job-storage-disposition-supported" Printer Description attribute (section 8.16).

The "job-storage-disposition" member attribute MUST NOT be preserved by the Job as a member of the "job-storage" Job Status attribute (section 7.1).

6.5.3 job-storage-group (name(MAX))

This member attribute specifies the group, if any, in which the Stored Job is listed. The value specified by the "job-storage-access" attribute (section 6.5.1) coordinates with the value of this attribute. If the "job-storage-access" attribute is 'group', then the value of this attribute MUST be one of the values specified by the Printer's "job-storage-group-supported" Printer Description attribute (section 8.17).

6.6 proof-print (collection)

This Job Template attribute indicates to the Printer that this Job is a Proof Job. This attribute allows a user to specify the attributes of the proof print(s) of the job that are to be printed prior to the printing the full run of the job. After the proof prints have been produced, the Printer MUST retain the completed job as a Proof Job for a period of time sufficient to allow users to proof the job, rather than aging it out after an implementation-defined period which SHOULD be longer than the period for ordinary completed Jobs (see Job Retention phase in [STD92] section 5.3.7.2 Partitioning of Job States). When a Proof Job is reprinted using any of the operations that reprint a Retained Job (e.g., Reprocess-Job or Resubmit-Job), the Printer MUST NOT copy the "proof-print" attribute from the Proof Job to the copy of the Proof Job so that the job is not re-proofed again. Only if the Resubmit-Job operation supplies its own "proof-print" attribute, will the copied job be proofed.

A Client MUST be able to supply and a Printer MUST support this attribute in order to claim support of this IPP Enterprise Printer Extensions v2.0 Specification, respectively. See section 12.5 Conformance Requirements for the REQUIRED "proof-print" Job Template attribute for additional conformance requirements for Clients and Printers.

This attribute MAY be used with the "job-password" attribute for a Password Protected Job that is also a Proof Job. A Printer indicates its support for this by listing "job-password" and "job-password-encryption" in its "proof-print-supported" Printer Description attribute (section 8.19).

Table 1 lists the member attributes of the "proof-print" collection attribute.

Table 1 - "proof-print" member attributes

<table>
<thead>
<tr>
<th>Member Attribute Name</th>
<th>Request</th>
<th>Printer Support</th>
</tr>
</thead>
</table>

Page 21 of 45 Copyright © 2019 The Printer Working Group. All rights reserved.
### 6.6.1 proof-print-copies (integer (0:MAX))

The "proof-print-copies" member attribute specifies the number of copies the Printer MUST produce in the proof job. The proof print(s) are produced using the Job Template attributes specified with the Job, except any overridden by member attributes in this collection.

If the "proof-print-copies" value is 0, then no proof prints are produced.

After the requested number of proof prints have been successfully produced by the Printer, then the Printer transitions the job to the 'completed' state and retains the job for a period of time that is long enough for the users to proof the output of the Proof Job, rather than aging the job out.

### 6.6.2 media (type2 keyword | name(MAX)) or media-col (collection)

Either the "media" (see [STD92]) or the "media-col" member attribute is used to indicate the media that the Printer MUST use for the specified "proof-print-copies" of the Proof Job. The member attributes are the same as those for the "media-col" attribute defined in [PWG5100.3] and in section 11.5 of this specification.

The Client MUST supply either the "media" or the "media-col" member attribute, but NOT both. If the Client supplies such a malformed request by supplying neither or both, the Printer MUST (depending on implementation) either (1) reject the request and return the 'client-error-bad-request' status code (see [STD92]) or (2) use either the "media" or the "media-col" member attribute, independent of the value of the "ipp-attribute-fidelity" attribute supplied by the Client.

Since this "media" member attribute has the same name as the "media" Job Template attribute (defined [STD92]), the "media-supported" (1setOf (type2 keyword | name(MAX))) Printer attribute identifies the values of this "media" member attribute (as well as the values of the "media" Job Template attribute) that the Printer supports, i.e., the names of the supported media. A value that is provided for the "media" member attribute in the collection would have the same effect as if the job were submitted with that value as the value of the "media" Job Template attribute.

Since this "media-col" member attribute has the same name as the "media-col" Job Template attribute (defined in [PWG5100.3] and in section 11.5 of this specification), the "media-col-supported" Printer attribute identifies the keyword names of the member attributes supported in this "media-col" member attribute (as well as the keyword names of the "media-col" Job Template attribute), i.e., the names of the member attributes that the Printer supports.
7. Job Status Attributes

7.1 job-storage (collection)

The "job-storage" Job Status attribute labels the Job as a Stored Job and specifies the storage handling requirements the Printer MUST follow. All the members of this Job Storage attribute are the same as those specified for the "job-storage" Job Template attribute (section 6.5).

8. Printer Description Attributes

8.1 job-cancel-after-default (integer(1:MAX) | no-value)

This attribute provides the default value of the "job-cancel-after" Job Template attribute (section 6.1).

8.2 job-cancel-after-supported (rangeOfInteger(1:MAX))

This attribute provides the allowed range of values the Printer will accept for the "job-cancel-after" Job Template attribute (section 6.1).

8.3 job-password-action-supported (type2 keyword)

The "job-password-action-supported" Printer Description attribute specifies the Printer's supported password actions. A password action defines how a Job is processed when the "job-password" operation attribute (section 5.1) is included in a Job Creation request.

Standard password action keyword values include:

- 'hold-job': The Job is placed in the 'pending-held' state and is released when the "job-password" value is entered at the Printer's console. The Job MUST NOT be retained once it has reached its terminal state ('completed', aborted' or 'canceled'). This is the semantic originally specified for the "job-password" operation attribute (section 5.1).

- 'process-and,retain': The Job is placed in the 'pending' state and it scheduled for processing without waiting for the User to enter the "job-password" value at the Printer's console.

- 'retain-only': The Job is placed in the 'completed' state as soon as all Documents are received by the Printer. The Printer will require a matching password for all reprints.

Once in a terminating state, the Job is retained according to the current value of its "job-retain-until" and/or "job-retain-until-time" attributes.
8.4 job-password-encryption-supported (1setOf (type2 keyword | name(MAX)))

The "job-password-encryption-supported" Printer Description attribute specifies which encryption methods the Printer supports for Secure Print.

If the "job-password" operation attribute is supported, then this attribute MUST be supported. Standard keyword values are in Table 2. The 'md2', 'md4', 'md5', and 'sha' keywords have been DEPRECATED. Others may be deprecated in the future as the state of the art of cryptography evolves.

Table 2 - Standard keywords for "job-password-encryption-supported"

<table>
<thead>
<tr>
<th>Keyword</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>'none'</td>
<td>The &quot;job-password&quot; attribute value is passed in the clear. No encryption has been applied. This value might also be used when the entire Operation is sent over a secure connection.</td>
</tr>
<tr>
<td>'md2'</td>
<td>The encryption method uses the MD2 hash algorithm defined in RFC 1319. [1]</td>
</tr>
<tr>
<td>'md4'</td>
<td>The encryption method uses the MD4 hash algorithm defined in RFC 1320. [1]</td>
</tr>
<tr>
<td>'md5'</td>
<td>The encryption method uses the MD5 hash algorithm defined in RFC 1321. [1]</td>
</tr>
<tr>
<td>'sha'</td>
<td>The encryption method uses the Secure Hash Algorithm 1 defined by the National Institute of Standards and Technology. [1]</td>
</tr>
<tr>
<td>'sha2-224'</td>
<td>The encryption method uses the Secure Hash Algorithm 2 defined by the National Institute of Standards and Technology, with an output size of 224 bits.</td>
</tr>
<tr>
<td>'sha2-256'</td>
<td>The encryption method uses the Secure Hash Algorithm 2 defined by the National Institute of Standards and Technology, with an output size of 256 bits.</td>
</tr>
<tr>
<td>'sha2-384'</td>
<td>The encryption method uses the Secure Hash Algorithm 2 defined by the National Institute of Standards and Technology, with an output size of 384 bits.</td>
</tr>
<tr>
<td>'sha2-512'</td>
<td>The encryption method uses the Secure Hash Algorithm 2 defined by the National Institute of Standards and Technology, with an output size of 512 bits.</td>
</tr>
</tbody>
</table>
'sha2-512_224' The encryption method uses the Secure Hash Algorithm 2 defined by the National Institute of Standards and Technology, with an output size of 512 bits, truncated to 224 bits.

'sha2-512_256' The encryption method uses the Secure Hash Algorithm 2 defined by the National Institute of Standards and Technology, with an output size of 512 bits, truncated to 256 bits.

'sha3-224' The encryption method uses the Secure Hash Algorithm 3 defined by the National Institute of Standards and Technology, with an output size of 224 bits.

'sha3-256' The encryption method uses the Secure Hash Algorithm 3 defined by the National Institute of Standards and Technology, with an output size of 256 bits.

'sha3-384' The encryption method uses the Secure Hash Algorithm 3 defined by the National Institute of Standards and Technology, with an output size of 384 bits.

'sha3-512' The encryption method uses the Secure Hash Algorithm 3 defined by the National Institute of Standards and Technology, with an output size of 512 bits.

'sha3-512_224' The encryption method uses the Secure Hash Algorithm 3 defined by the National Institute of Standards and Technology, with an output size of 512 bits, truncated to 224 bits.

'sha3-512_256' The encryption method uses the Secure Hash Algorithm 3 defined by the National Institute of Standards and Technology, with an output size of 512 bits, truncated to 256 bits.

'shake-128' The encryption method uses the SHAKE128 method defined by the National Institute of Standards and Technology, with an output size of 128 bits.

'shake-256' The encryption method uses the SHAKE256 method defined by the National Institute of Standards and Technology, with an output size of 256 bits.

[1] - Deprecated

8.5 job-password-length-supported (rangeOfInteger (0:255))

The 4.1 "job-password-length-supported" Printer Description attribute specifies the minimum and maximum supported length of the unencrypted password, measured in characters. The
717 character set encoding is specified by the "job-password-repertoire-configured" attribute (Section XX). The Printer is configured to accept an empty password if the range’s minimum value is 0 (zero).

720 This attribute complements the existing "job-password-supported" attribute [PWG5100.11], which specifies the maximum password length supported before encryption, measured in octets.

8.6 job-password-repertoire-supported (1setOf (type2 keyword))

724 The "job-password-repertoire-supported" attribute enumerates the job password repertoires (allowable characters, character sets and encodings) the Printer can be configured to use.

726 The keywords are named according to a 'REGISTRY_ENCODING_RANGE' naming structure convention. Table 3 lists the standard keywords. Vendor repertoire keywords, prefixed with "vendor_" to indicate a vendor-specific registry, may also be used. Vendor repertoire keywords SHOULD be registered with the PWG to achieve interoperability. As an example, a vendor may choose to register the 'vendor_us-ascii_lowercase' keyword to specify a repertoire limited to using only lowercase characters from the US ASCII encoding.

732 The "utf-8" encoding name indicates the use of Network Unicode [RFC5198].

<table>
<thead>
<tr>
<th>Keyword</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>'iana_us-ascii_digits'</td>
<td>Value must consist of only ASCII digits (0x30-0x39)</td>
</tr>
<tr>
<td>'iana_us-ascii_letters'</td>
<td>Value must consist of only US ASCII letters (0x41-0x5A, 0x61-0x7A)</td>
</tr>
<tr>
<td>'iana_us-ascii_complex'</td>
<td>Value must consist of US ASCII letters and numbers, with at least one uppercase letter, one lowercase letter, and one digit (0x30-0x39, 0x41-0x5A, 0x61-0x7A)</td>
</tr>
<tr>
<td>'iana_us-ascii_any'</td>
<td>Value must consist of US ASCII printable characters (0x20-0x7e)</td>
</tr>
<tr>
<td>'iana_utf-8_digits'</td>
<td>Value must consist of only UTF-8 numerical digits</td>
</tr>
<tr>
<td>'iana_utf-8_letters'</td>
<td>Value must consist of UTF-8 letters</td>
</tr>
<tr>
<td>'iana_utf-8_any'</td>
<td>Value must consist of UTF-8 printable characters</td>
</tr>
</tbody>
</table>
8.7 job-password-repertoire-configured (type2 keyword)

The "job-password-repertoire-configured" attribute indicates the password repertoire currently configured for this Printer. The value of this attribute MUST be one of the values specified in the Printer's "job-password-repertoire-supported" attribute (section XX). A supporting Client can use this attribute's value to limit User input so that the value in "job-password" will comply with the configured password repertoire.

8.8 job-password-supported (integer(0:255))

The "job-password-supported" Printer Description attribute indicates the maximum length that the Printer will accept for the unencrypted password which the Client will encrypt as the value of the "job-password" Operation Attribute. A conforming Printer MUST be able to accept 255 octets without truncation. However, a Printer MAY be implemented as a gateway to another print system that cannot accept the full 255-octet range, in which case the Client MUST NOT allow an unencrypted password greater than the length specified by this attribute.

8.9 job-pause-after-supported (1setOf type2 keyword)

This attribute lists the

8.10 job-phone-number-default (uri)

The default value supplied by the Printer if the Client omits the 'job-phone-number" Job Template attribute. This attribute SHOULD use the 'tel:' scheme [RFC2806].

8.11 job-phone-number-supported (boolean)

A true value indicates that the Printer accepts the "job-phone-number" attribute.

8.12 job-recipient-name-default (name(MAX))

The default value supplied by the Printer if the Client omits the 'job-recipient-name" Job Template attribute.

8.13 job-recipient-name-supported (boolean)

This attribute indicates whether the Printer accepts the "job-recipient-name" attribute.

8.14 job-storage-supported (1setOf keyword)

This attribute indicates whether the Printer supports the Job Storage feature, and what members are supported by the Printer.
The Printer indicates support for Stored Jobs that are also Protected Jobs by including both "job-password" and "job-password-encryption" in the set of keywords. If the Printer lists these two attribute name keywords, it MUST accept "job-password" and "job-password-encryption" with "job-storage". If "job-password" and "job-password-encryption" are both specified for the Job, the Job MUST NOT return these attributes in a Get-Job-Attributes request. The Printer MUST preserve the "job-password" and "job-password-encryption" Job Status attributes in all copies of the original Job to maintain Job Protection.

### 8.15 job-storage-access-supported (1setOf type2 keyword)

This attribute specifies the Job Storage access modes supported by the Printer. Standard keywords for the "job-storage-access" attribute are listed in Table 4.

<table>
<thead>
<tr>
<th>Keyword</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;group&quot;</td>
<td>Visible to only the group to which the submitting most authenticated user is a member</td>
</tr>
<tr>
<td>&quot;owner&quot;</td>
<td>Visible to only the submitting most authenticated user</td>
</tr>
<tr>
<td>&quot;public&quot;</td>
<td>Visible to all users (may still be password protected)</td>
</tr>
</tbody>
</table>

### 8.16 job-storage-disposition-supported (1setOf type2 keyword)

This attribute specifies the Job Storage dispositions supported by the Printer. Standard keywords for the "job-storage-access" attribute are listed in Table 5.

<table>
<thead>
<tr>
<th>Keyword</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;none&quot;</td>
<td>The Printer MUST print the Job. The Printer MUST NOT retain the Job in the Job Retention phase; it MUST move it immediately to the Job History phase.</td>
</tr>
<tr>
<td>&quot;print-and-store&quot;</td>
<td>The Printer MUST print the Job. If the Job reaches the 'completed' state, it MUST retain the Job in the Job Retention phase.</td>
</tr>
<tr>
<td>&quot;store-only&quot;</td>
<td>The Printer MUST NOT print the Job. The Printer MUST retain the Job in the Job Retention phase.</td>
</tr>
</tbody>
</table>
8.17 job-storage-group-supported (1setOf name(MAX))

This attribute specifies the user groups to which a Stored Job could be made visible when it is stored, using the "job-storage-group" member (section 6.5.3) of the "job-storage" attribute (section 6.5). The value of this attribute will list different values if returned in an authenticated Get-Printer-Attributes or Get-User-Printer-Attributes response.

8.18 proof-print-default (collection)

This attribute specifies the default value of "proof-print" the Printer will use when the Client doesn't specify the "proof-print" Job Template attribute in a Job Creation request. A Printer MUST support the same member attributes for this default collection as it supports for the corresponding "proof-print" Job Template attribute.

8.19 proof-print-supported (1setOf keyword)

This attribute lists the member attributes of "proof-print" that the Printer supports.

The Printer indicates support for Proof Print Jobs that are also Protected Jobs by including both "job-password" and "job-password-encryption" in the set of keywords. If the Printer lists these two attribute name keywords, it MUST accept "job-password" and "job-password-encryption" with "proof-print". If "job-password" and "job-password-encryption" are both specified for the Job, the Job MUST NOT return these attributes in a Get-Job-Attributes request. The Printer MUST preserve the "job-password" and "job-password-encryption" Job Status attributes in all copies of the original Job to maintain Job Protection.

8.20 proof-print-copies-supported (rangeOfInteger(0:MAX))

This attribute specifies the range of values the Printer supports for the "proof-print-copies" member attribute of the "proof-print" Job Template attribute (section 6.6.1).

9. Additional Semantics for Existing Operations

9.1 Create-Job, Print-Job, and Print-URI Operations: "job-password" and "job-password-encryption"

A Printer that supports the "job-password" operation attribute (section 5.1) and "job-password-encryption" operation attribute (section 5.3) MUST validate the values supplied and return the 'client-error-bad-request' status code if the values are invalid or not supported. A Printer MUST NOT return the "job-password" or "job-password-encryption" attributes in the Unsupported Attributes Group to prevent the leaking of security information.
9.2 Validate-Job Operation: "job-password" and "job-password-encryption"

A Client MUST NOT send the "job-password" operation attribute (section 5.1) or "job-password-encryption" operation attribute (section 5.3) in a Validate-Job request. Printers MUST reject a Validate-Job request containing either a "job-password" or "job-password-encryption" operation attribute and return the 'client-error-bad-request' status code.

10. Additional Values and Semantics for Existing IPP Attributes

This section defines additional values for existing attributes. The existing text for those attributes is not reproduced here in order to prevent deviations.

10.1 ipp-features-supported (1setOf type2 keyword)

This IPP Enterprise Printer Extensions v2.0 specification defines the 'authenticated-release', 'job-protection', 'job-storage' and 'proof-print' keywords for the "ipp-features-supported" Printer Description attribute [PWG5100.13] to let the Printer to indicate its support for one or more of the major features defined in this specification.

10.2 job-hold-until (type2 keyword | name(MAX))

This IPP Enterprise Printer Extensions v2.0 specification defines additional keyword values for the "job-hold-until" Job Template attribute [STD92] to support workflow features specified elsewhere in this document. Table 6 lists the new values and their uses.

<table>
<thead>
<tr>
<th>Keyword</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>'owner-authorized'</td>
<td>Hold the Job until the Owner has authorized it to be released. A supporting Printer MAY challenge the Client for authentication credentials. A supporting Client MUST expect an authentication challenge from the Printer.</td>
</tr>
<tr>
<td>'button-press'</td>
<td>Hold the Job until a button press on the Output Device's control panel authorizes it to be released to processing.</td>
</tr>
</tbody>
</table>

10.3 job-state-reasons (1setOf type2 keyword) Job Description attribute

This section adds additional keywords to the "job-cancel-after" attribute (section 6.1) in support of the Job Storage Feature (section 4.2), the Job Protection Feature (section 4.4) and the Job Proof Print Feature (section 4.5).
Many of the existing "job-state-reasons" attribute values can apply to a 'save-only' Job as well as a Job submitted for printing. If the value of the "job-storage-disposition" attribute is store-only', the "job-state-reasons" attribute MAY be set with existing values such as 'job-incoming', 'resources-are-not-ready' (such as a font), 'job-interpreting', and 'job-queued'.

Likewise, errors that occur on a Stored Job MAY have existing "job-state-reasons" attribute values such as 'job-data-insufficient', 'document-access-error', 'submission-interrupted', 'job-canceled-by-user', 'aborted-by-system', etc.

There are also new four new "job-state-reasons" keyword values REQUIRED that support a Stored Job: 'job-storing', 'job-stored-successfully', 'job-stored-with-warnings', and 'job-stored-with-errors'. The existing 'job-completed-successfully', 'job-completed-with-warnings', and 'job-completed-with-errors' values are also clarified in the list above for implementations that support the "job-save-disposition" Job Template attribute, in such a way that these values remain compatible with Printers and Clients that do not support job saving. Table 7 defines the meanings of these 4 new "job-state-reasons" keywords.

<table>
<thead>
<tr>
<th>Keyword</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>'job-cancelled-after-timeout'</td>
<td>The Job was canceled because the timer with a duration specified by the &quot;job-cancel-after&quot; attribute (section 7.4) to the &quot;job-state-reasons&quot; Job Status attribute.</td>
</tr>
<tr>
<td>'job-awaiting-password'</td>
<td>The Job is in the 'pending-held' state awaiting a password to be entered to allow it to be released to processing.</td>
</tr>
<tr>
<td>'job-awaiting-proof-release'</td>
<td>The Job is in the 'processing-stopped' state following the printing of the first copy, awaiting a signal of approval to allow the remaining copies to be produced.</td>
</tr>
<tr>
<td>'job-password-timeout'</td>
<td>The Job is in the 'aborted' state being retained and stored by the Printer, ready to be duplicated to produce a new reprint Job.</td>
</tr>
<tr>
<td>'job-stored-successfully'</td>
<td>The job was successfully saved. The Printer MUST also supply 'job-completed-successfully', except when &quot;job-storage-disposition&quot; = 'store-only'. If the &quot;job-storage&quot; Job Template attribute is supported, this value MUST be supported.</td>
</tr>
<tr>
<td>'job-stored-with-errors'</td>
<td>The job did not save successfully (whether or not it was printed successfully, printed with warnings, printed with errors, or not printed). The Printer MUST ensure that none of the saved job is accessible, if it was unable to successfully save all of the job. If the &quot;job-storage&quot; Job Template attribute is supported, this value MUST be supported.</td>
</tr>
</tbody>
</table>
'job-stored-with-warnings' The job was saved with warnings. If the "job-storage" Job Template attribute is supported, this value MUST be supported.

'job-storing' The Printer is transmitting the job to the save location. This is similar to the 'job-printing' value. If the "job-storage" Job Template attribute is supported, this value MUST be supported.

Table 8 enumerates the possible combinations of print and save success, warning, and error conditions. Note that two values occur only when there are print warnings/errors and a save error.

Table 8 - Values of "job-state-reasons" attribute for various job conditions

<table>
<thead>
<tr>
<th></th>

<td></td>
</tr>
</tbody>
</table>

10.4 which-jobs (type2 keyword) and which-jobs-supported (1setOf type2 keyword)

This IPP Enterprise Printer Extensions v2.0 specification defines additional keyword values for the IPP "which-jobs" operation attribute of the Get-Jobs operation [STD92] and the "which-jobs-supported" Printer Description attribute [PWG5100.7] to support filtering for Proof Jobs and Stored Jobs. Table 9 lists the new values and their uses.

Table 9 - Additional Keywords for "which-jobs" and "which-jobs-supported"

<table>
<thead>
<tr>
<th>Keyword</th>
<th>Description</th>
</tr>
</thead>
</table>

'proof-print' Proof Jobs, i.e., Jobs that have been submitted using the "proof-print" Job Template attribute and which are in the 'completed', 'canceled', or 'aborted' state. If the "proof-print" Job Template attribute is supported, this value MUST be supported.

'stored-public' Public Stored Jobs, i.e., Jobs that have been stored using the "job-storage " Job Template attribute where the "job-storage-access" member attribute specifies 'public', and which are in the 'completed' state. If the "job-storage" Job Template attribute is supported, this value MUST be supported.

'stored-owner' Private Stored Jobs, i.e., Jobs that have been stored using the "job-storage " Job Template attribute where the "job-storage-access" member attribute specifies 'owner', and which have reached the 'completed' state. If the "job-storage" Job Template attribute is supported, this value MUST be supported.

A Client that specifies the 'stored-owner' keyword for "which-jobs" MUST be prepared to handle an authentication challenge from the Printer.

11. Obsolete Attributes and Values

11.1 Obsolete Attributes

Table 10 lists the attributes that are OBSOLETE.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>job-save-disposition</td>
<td>The Job Save and Reprint Feature [PWG5100.11] has been deprecated</td>
</tr>
<tr>
<td>pages-per-subset</td>
<td>Redundant with &quot;job-pages-per-set&quot; [PWG5100.1]</td>
</tr>
<tr>
<td>sheet-collate</td>
<td></td>
</tr>
</tbody>
</table>

11.2 Obsolete Values

Table 11 lists the values that are OBSOLETE.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Value</th>
<th>Explanation</th>

12. Conformance Requirements

This section summarizes the Conformance Requirements detailed in the definitions in this document for Client and Printer objects (servers or devices).

12.1 Authenticated Release Feature

12.1.1 Printer Conformance Requirements

In order for a Printer to claim conformance with the Authenticated Release Feature defined in this specification, a Printer MUST support:

1. The "job-hold-until" attribute defined in [STD92];
2. The required operations defined in section Error! Reference source not found.;
3. The additional semantics defined in section Error! Reference source not found.;
4. The additional values defined in section Error! Reference source not found.;
5. The status codes defined in section Error! Reference source not found.;
6. The internationalization considerations defined in section Error! Reference source not found.; and
7. The security considerations defined in section Error! Reference source not found.
12.1.2 Client Conformance Requirements

In order for a Client to claim conformance with the Authenticated Release Feature defined in this specification, a Client MUST support:

1. The required attributes and values defined in section Error! Reference source not found.;
2. The required operations defined in section Error! Reference source not found.;
3. The additional semantics defined in section Error! Reference source not found.;
4. The additional values defined in section Error! Reference source not found.;
5. The status codes defined in section Error! Reference source not found.;
6. The internationalization considerations defined in section Error! Reference source not found.; and
7. The security considerations defined in section Error! Reference source not found.

12.2 Job Protection Feature

12.2.1 Printer Conformance Requirements

In order for a Printer to claim conformance with the Job Protection Feature defined in this specification, a Printer MUST support:

1. The required attributes and values defined in section Error! Reference source not found.;
2. The required operations defined in section Error! Reference source not found.;
3. The additional semantics defined in section Error! Reference source not found.;
4. The additional values defined in section Error! Reference source not found.;
5. The status codes defined in section Error! Reference source not found.;
6. The internationalization considerations defined in section Error! Reference source not found.; and
7. The security considerations defined in section Error! Reference source not found.

12.2.2 Client Conformance Requirements

In order for a Client to claim conformance with the Job Protection Feature defined in this specification, a Client MUST support:

1. The required attributes and values defined in section Error! Reference source not found.;
2. The required operations defined in section Error! Reference source not found.;
3. The additional semantics defined in section Error! Reference source not found.;
4. The additional values defined in section Error! Reference source not found.;
5. The status codes defined in section Error! Reference source not found.;
6. The internationalization considerations defined in section Error! Reference source not found.; and
7. The security considerations defined in section Error! Reference source not found.

12.3 Job Storage Feature

12.3.1 Printer Conformance Requirements

In order for a Printer to claim conformance with the Job Storage Feature defined in this specification, a Printer MUST support:

1. The required attributes and values defined in section Error! Reference source not found.;
2. The required operations defined in section Error! Reference source not found.;
3. The additional semantics defined in section Error! Reference source not found.;
4. The additional values defined in section Error! Reference source not found.;
5. The status codes defined in section Error! Reference source not found.;
6. The internationalization considerations defined in section Error! Reference source not found.; and
7. The security considerations defined in section Error! Reference source not found.

12.3.2 Client Conformance Requirements

In order for a Client to claim conformance with the Job Storage Feature defined in this specification, a Client MUST support:

1. The required attributes and values defined in section Error! Reference source not found.;
2. The required operations defined in section Error! Reference source not found.;
3. The additional semantics defined in section Error! Reference source not found.;
4. The additional values defined in section Error! Reference source not found.;
5. The status codes defined in section Error! Reference source not found.;
6. The internationalization considerations defined in section Error! Reference source not found.; and
7. The security considerations defined in section Error! Reference source not found.
13. Internationalization Considerations

For interoperability and basic support for multiple languages, conforming implementations MUST support the Universal Character Set (UCS) Transformation Format -- 8 bit (UTF-8) [RFC3629] encoding of Unicode [UNICODE] [ISO10646] and the Unicode Format for Network Interchange [RFC5198].

Implementations of this specification SHOULD conform to the following standards on processing of human-readable Unicode text strings, see:

- Unicode Bidirectional Algorithm [UAX9] – left-to-right, right-to-left, and vertical
- Unicode Line Breaking Algorithm [UAX14] – character classes and wrapping
- Unicode Normalization Forms [UAX15] – especially NFC for [RFC 5198]
- Unicode Text Segmentation [UAX29] – grapheme clusters, words, sentences
- Unicode Identifier and Pattern Syntax [UAX31] – identifier use and normalization
- Unicode Collation Algorithm [UTS10] – sorting
- Unicode Locale Data Markup Language [UTS35] – locale databases

Implementations of this specification are advised to also review the following informational documents on processing of human-readable Unicode text strings:

- Unicode Character Encoding Model [UTR17] – multi-layer character model
- Unicode in XML and other Markup Languages [UTR20] – XML usage
- Unicode Character Property Model [UTR23] – character properties
- Unicode Conformance Model [UTR33] – Unicode conformance basis

14. Security Considerations

In addition to the security considerations described in the IPP/1.1: Model and Semantics [STD92], implementations of this specification SHOULD conform to the following standards on processing of human-readable Unicode text strings:

- Unicode Security FAQ [UNISECFAQ] – common Unicode security issues
15. IANA Considerations

15.1 IPP Attribute and Keyword Value Registrations

This section contains the exact registration information for IANA to update according to the procedures defined in [STD92].

The registry entries will contain the following information:

Job Template attributes:

- job-cancel-after (integer(1:MAX))
- job-phone-number (uri)
- job-recipient-name (name(MAX))
- job-storage (collection)
- job-storage-access (type2 keyword)
- job-storage-disposition (type2 keyword)
- job-storage-group (name(MAX))
- proof-print (collection)
- media (type2 keyword | name(MAX))
- media-col (collection)
- proof-print-copies (integer (0:MAX))

Operation attributes:

- job-password (octetString(255))
- job-password-action (type2 keyword)
- job-password-encryption (type2 keyword | name(MAX))

Job Status attributes:

- job-storage (collection)

Printer Description attributes:

- job-cancel-after-default (integer(1:MAX))
- job-password-action-supported (1setOf (type2 keyword))
- job-password-encryption-supported (1setOf (type2 keyword | name(MAX)))
- job-password-repertoire-configured (1setOf (type2 keyword | name(MAX)))
- job-password-repertoire-supported (1setOf (type2 keyword | name(MAX)))
- job-password-supported (integer(0:255))
- job-phone-number (uri)
- job-phone-number-supported (boolean)
- job-print-password-supported (octetString(256))
- job-print-password-encryption-supported (type2 keyword)
- job-print-password-repertoire-supported (type2 keyword)
- job-recipient-name-default (name(MAX))
- job-recipient-name-supported (boolean)
- job-storage-access-supported (1setOf type2 keyword)
- job-storage-disposition-supported (1setOf type2 keyword)
- job-storage-group-supported (1setOf type2 keyword)
- job-storage-supported (1setOf type2 keyword)
- printer-detailed-status-messages (1setOf text(MAX))
- proof-print-default (collection)
- proof-print-supported (1setOf type2 keyword)
- proof-print-copies-supported (rangeOfInteger(0:MAX))
15.2 Attribute Value Registrations

The attributes defined in this specification will be published by IANA according to the procedures in IPP/1.1 Model and Semantics [STD92] section 7.1 in the following file:

http://www.iana.org/assignments/ipp-registrations

The registry entries will contain the following information:

<table>
<thead>
<tr>
<th>Attribute (attribute syntax)</th>
<th>Reference</th>
</tr>
</thead>
<tbody>
<tr>
<td>ipp-featues-supported</td>
<td>[FWG5100.13]</td>

Implementers of this specification document are encouraged to join the IPP Mailing List in order to participate in any discussions of clarification issues and review of registration proposals for additional attributes and values.

The editors would like to especially thank the following individuals who also contributed significantly to the development of this document:

Ira McDonald
High North, Inc.

Chris Rizzo
Xerox

18. Change History

18.1 October 10, 2019

Updated as per brief review from 2019-09-26 and from other sources:

- Moved "Additional Semantics for Existing Operations" subsections relating to "job-password" from JPS3v2 to new section 9 / 9.1 / 9.2
- Updated IANA Considerations section with many editorial fixes
- Expanded the "Authorized Release Feature" feature description
18.2 September 11, 2019

Added definition of the 'enterprise' keyword for "ipp-features-supported" as per agenda for 2019-09-12 IPP WG meeting and added reference to PWG 5100.13. Also made all URLs in references use the "https" scheme.

18.3 September 3, 2019

Updated as per feedback from the July 18 IPP Workgroup teleconference review and other feedback:

- Added version number ("v2.0") to title and name
- Updated abstract and other references to use new feature names
- Restored IPP Proof Print from 5100.11 and "rebranded" it as the Job Proof Print Feature in this document. Abandoned the proposed new Proof Print feature from HP.
- Removed the " | name(MAX)" from the syntax definition for job-password-encryption, since site-defined localized strings in that context would seem to be unlikely and of limited value
- Added "job-pause-after" and then questioned whether we ought to be adding it
- Added a MAY statement allowing "job-password" to be used with "proof-print", with corresponding conditional requirements, so that the Job Proof Print Feature and Job Protection Feature can be used with a single Job to make a Protected Proof Print Job.
- Added "proof-print-password-supported" and "proof-print-copies-supported"
- Various questions still to be resolved are in comments

18.4 June 14, 2019

Updated to resolve issues identified in the April 2019 PWG F2F and to align with IPP Job Extensions v2.0.

18.5 March 27, 2019

Initial revision based on an abandoned update to JPS2v2 and discussions on the IPP WG reflector.
