**IPP Job and Printer Extensions – Set 2 v2.0
(JPS2)**

Status: Initial

Abstract: This IPP Job and Printer Extensions – Set 2 v2.0 Specification (JPS2) defines extension to IPP/1.1 [STD92]. This JPS2 defines IPP additions to support the Job Proof Print Feature, the Job Save and Reprint Feature, Job passwords and processing control, and a collection of other attributes to support various use cases.

This document is a PWG Working Draft. For a definition of a "PWG Working Draft", see:

26 This document may be copied and furnished to others, and derivative works that comment
27 on, or otherwise explain it or assist in its implementation may be prepared, copied, published
28 and distributed, in whole or in part, without restriction of any kind, provided that the above
29 copyright notice, this paragraph and the title of the Document as referenced below are
30 included on all such copies and derivative works. However, this document itself may not be
31 modified in any way, such as by removing the copyright notice or references to the IEEE-
32 ISTO and the Printer Working Group, a program of the IEEE-ISTO.

33 Title: *IPP Job and Printer Extensions – Set 2 v2.0 (JPS2)*

34 The IEEE-ISTO and the Printer Working Group DISCLAIM ANY AND ALL WARRANTIES,
35 WHETHER EXPRESS OR IMPLIED INCLUDING (WITHOUT LIMITATION) ANY IMPLIED
36 WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

37 The Printer Working Group, a program of the IEEE-ISTO, reserves the right to make
38 changes to the document without further notice. The document may be updated, replaced
39 or made obsolete by other documents at any time.

40 The IEEE-ISTO takes no position regarding the validity or scope of any intellectual property
41 or other rights that might be claimed to pertain to the implementation or use of the technology
42 described in this document or the extent to which any license under such rights might or
43 might not be available; neither does it represent that it has made any effort to identify any
44 such rights.

45 The IEEE-ISTO invites any interested party to bring to its attention any copyrights, patents,
46 or patent applications, or other proprietary rights which may cover technology that may be
47 required to implement the contents of this document. The IEEE-ISTO and its programs shall
48 not be responsible for identifying patents for which a license may be required by a document
49 and/or IEEE-ISTO Industry Group Standard or for conducting inquiries into the legal validity
50 or scope of those patents that are brought to its attention. Inquiries may be submitted to the
51 IEEE-ISTO by e-mail at: ieee-isto@ieee.org.

52 The Printer Working Group acknowledges that the IEEE-ISTO (acting itself or through its
53 designees) is, and shall at all times, be the sole entity that may authorize the use of
54 certification marks, trademarks, or other special designations to indicate compliance with
55 these materials.

56 Use of this document is wholly voluntary. The existence of this document does not imply that
57 there are no other ways to produce, test, measure, purchase, market, or provide other goods
58 and services related to its scope.

59

60 **About the IEEE-ISTO**

61 The IEEE-ISTO is a not-for-profit corporation offering industry groups an innovative and
62 flexible operational forum and support services. The IEEE-ISTO provides a forum not only
63 to develop standards, but also to facilitate activities that support the implementation and
64 acceptance of standards in the marketplace. The organization is affiliated with the IEEE
65 (<http://www.ieee.org/>) and the IEEE Standards Association (<http://standards.ieee.org/>).

66 For additional information regarding the IEEE-ISTO and its industry programs visit:

67 <http://www.ieee-isto.org>

68 **About the IEEE-ISTO PWG**

69 The Printer Working Group (or PWG) is a Program of the IEEE Industry Standards and
70 Technology Organization (ISTO) with member organizations including printer
71 manufacturers, print server developers, operating system providers, network operating
72 system providers, network connectivity vendors, and print management application
73 developers. The group is chartered to make printers and the applications and operating
74 systems supporting them work together better. All references to the PWG in this document
75 implicitly mean “The Printer Working Group, a Program of the IEEE ISTO.” In order to meet
76 this objective, the PWG will document the results of their work as open standards that define
77 print related protocols, interfaces, procedures and conventions. Printer manufacturers and
78 vendors of printer related software will benefit from the interoperability provided by voluntary
79 conformance to these standards.

80 In general, a PWG standard is a specification that is stable, well understood, and is
81 technically competent, has multiple, independent and interoperable implementations with
82 substantial operational experience, and enjoys significant public support.

274

275 **1. Introduction**

276 This specification defines an extension to IPP/1.1 [STD92]. This specification defines
 277 Operation attributes, Job Template attributes, and Printer Description attributes as
 278 summarized in Table 1. This specification also defines or references REQUIRED operations
 279 as summarized in Table 2. Finally, this specification defines OPTIONAL semantics for
 280 Attribute Precedence, a Queue Override Feature, and a feature to guarantee protocol
 281 precedence over the PDL directives.

282 **Table 1 - Summary of Attributes Defined**

Attribute Name (syntax)	Description	Conformance
Operation Attributes		
job-password (octetString(255))	Password for secure processing	OPTIONAL
job-password-encryption (type2 keyword name(MAX))	Password encryption method for secure printing	OPTIONAL
job-ids (1setOf integer(1:MAX))	List of Job ids for Cancel-Jobs, Cancel-My-Jobs, Get-Jobs, and Purge-Jobs operations.	REQUIRED
Job Template Attributes		
feed-orientation (type2 keyword)	Media edge to be fed into the print engine from the paper tray	OPTIONAL
font-name-requested (name(MAX))	Font name when missing from the document data (e.g. text documents)	OPTIONAL
font-size-requested (integer (1:MAX))	Font size in points when missing from the document data (e.g. text documents)	OPTIONAL
job-delay-output-until (type2 keyword name(MAX))	Delay output until a specified time period, but allow processing	OPTIONAL
job-delay-output-until-time (dateTime)	Delay output until a specified date and time, but allow processing	OPTIONAL
job-hold-until-time (dateTime)	Hold the Job until the supplied date and time	OPTIONAL
job-phone-number (uri)	Contact telephone number for the job	OPTIONAL
job-recipient-name (name(MAX))	Name of the person that is to receive the output of the job	OPTIONAL
job-save-disposition (collection)	Save the Document Data of a job, such that the Job can be re-printed	OPTIONAL

Attribute Name (syntax)	Description	Conformance
pdl-init-file (1setOf collection)	Controls initialization of the Printer's PDL interpreter(s)	OPTIONAL
proof-print (collection)	Control a proof print of the Job before printing a full run of the job	REQUIRED
Job Description Attributes		
job-save-printer-make-and-model (text(127))	Make and model of the output device which saved this job	OPTIONAL
Printer Description Attributes		
job-creation-attributes-supported (1setOf type2 keyword)	set of Job Creation attributes supported	OPTIONAL
job-ids-supported (boolean)	Whether "job-ids-supported" is supported in Purge-Jobs and Get-Jobs operations	REQUIRED
job-password-supported (integer (0:255))	Maximum unencrypted password length supported	OPTIONAL
job-password-encryption-supported (1setOf (type2 keyword name(MAX)))	Encryption methods supports for Secure Print	OPTIONAL
job-spooling-supported (type2 keyword)	Indicates whether or not jobs are spooled before printing	OPTIONAL
max-save-info-supported (integer(1:MAX))	Maximum number of "save-info" member attribute collections that a Printer can accept	OPTIONAL
media-col-database (1setOf collection)	Set of media collections available in the printer's media database	OPTIONAL
printer-detailed-status-messages (1setOf text(MAX))	Additional detailed and technical information about the printer	OPTIONAL
which-jobs-supported (1setOf type2 keyword)	Supported values for the "which-jobs" operation attribute of the Get-Jobs operation	REQUIRED

283 Many of the semantics of these Job Template and Operation attributes MAY also be supplied
284 in corresponding document format (PDL) directive. In such cases, the user MAY request that
285 the application include these directives as part of the document data when the document is
286 generated, rather than in the IPP protocol at print time. However, some applications are
287 unable to generate such PDL directives when generating the PDL document data. Also,
288 some of these semantics are not supported in some PDLs. Finally, in a production
289 environment, the document may be generated separately from being printed, in which case

290 the end user or the production printer operator supplies the instructions at print time, long
 291 after the document had been created.

292 **Table 2 - Summary of Operations defined or referenced**

Operation	Description	Conformance
Cancel-Jobs	Allows an operator/administrator to cancel a list of Not Completed jobs or all Not Completed jobs on the Printer	REQUIRED
Cancel-My-Jobs	Allows a user to cancel a list of their Not Completed jobs or <i>all</i> of their Not Completed jobs	REQUIRED
Close-Job	Allows a Client to close a multi-document Job without supplying any additional documents.	REQUIRED
Reprocess-Job	Allows a user to re-process an exact copy of a Retained Job. This operation is defined in [RFC3998]	REQUIRED
Resubmit-Job	Allows a user to re-process a modified copy of a Retained Job.	REQUIRED

293 **2. Terminology**

294 This section defines the following additional terms that are used throughout this document.

295 **2.1 Conformance Terminology**

296 Capitalized terms, such as MUST, MUST NOT, RECOMMENDED, REQUIRED, SHOULD,
 297 SHOULD NOT, MAY, and OPTIONAL, have special meaning relating to conformance as
 298 defined in Key words for use in RFCs to Indicate Requirement Levels [RFC2119]. The term
 299 CONDITIONALLY REQUIRED is additionally defined for a conformance requirement that
 300 applies when a specified condition is true.

301 **2.2 Printing Terminology**

302 Normative definitions and semantics of printing terms are imported from IETF Printer MIB
 303 v2 [RFC3805], IETF Finisher MIB [RFC3806], and IETF Internet Printing Protocol/1.1: Model
 304 and Semantics [STD92].

305 *Document*: An object created and managed by a Printer that contains the description,
 306 processing, and status information. A Document object may have attached data and is
 307 bound to a single Job.

308 *Job*: An object created and managed by a Printer that contains description, processing, and
 309 status information. The Job also contains zero or more Document objects.

310 *Logical Device*: a print server, software service, or gateway that processes Jobs and either
311 forwards or stores the processed Job or uses one or more Physical Devices to render output.

312 *Output Device*: a single Logical or Physical Device

313 *Physical Device*: a hardware implementation of an endpoint device, e.g., a marking engine,
314 a fax modem, etc.

315 **2.3 Protocol Role Terminology**

316 This document also defines the following protocol roles in order to specify unambiguous
317 conformance requirements:

318 *Client*: Initiator of outgoing connections and sender of outgoing operation requests
319 (Hypertext Transfer Protocol -- HTTP/1.1 [RFC7230] User Agent).

320 *Printer*: Listener for incoming connections and receiver of incoming operation requests
321 (Hypertext Transfer Protocol -- HTTP/1.1 [RFC7230] Server) that represents one or more
322 Physical Devices or a Logical Device.

323 **2.4 Other Terminology**

324 *Document Creation Operations*: The operations that create documents: Print-Job, Print-
325 URI, Send-Document and Sent-URI.

326 *Job Creation operation*: One of the operations that creates a Job object: Print-Job, Print-
327 URI and Create-Job. The Restart-Job operation [STD92] is not considered a Job Creation
328 operation, since the Printer re-uses the existing Job object. The Validate-Job operation is
329 not considered a Job Creation operation because no Job object is created. Therefore, when
330 a statement also applies to either the Restart-Job and/or the Validate-Job operation, they
331 are mentioned explicitly.

332 *Job Instructions*: Information that affects how the Job and its associated documents are to
333 be processed. This includes the Job Template Attributes, some Operation Request
334 Attributes, and other attributes (such as defaults) that are applied to a job.

335 *Job Proof Print Feature*: The Job Proof Print Feature (section 4.4) is REQUIRED functionality
336 to allow a user to print one or more copies of a Job for proofing, called a Proof Print Job,
337 using the "proof-print" (collection) Job Template attribute (section 7.11). Subsequently, the
338 user can reprint the Proof Print Job using REQUIRED Resubmit-Job operation (section 5.4)
339 or the REQUIRED Reprocess-Job operation [RFC3998] to get the desired number of copies
340 after the user has proof read the output of the Proof Print Job

341 *Job Save and Reprint Feature*: The Job Save and Reprint Feature (section 4.3) is additional
342 OPTIONAL functionality to allow a user to save a Job as part of Job processing and print it
343 at another time using the OPTIONAL "job-save-disposition" (collection) Job Template

344 attribute (section 7.9). When saving a job, a user MAY specify saving parameters such as
345 the location (remote or local) to save the Job Instructions and/or the Document Data, and/or
346 specify the format in which the print data and Job instructions are saved. Subsequently, the
347 user reprints the Saved Job using either the REQUIRED Resubmit-Job operation (section
348 5.4) or the REQUIRED Reprocess-Job operation [RFC3998].

349 *Job-Submission Operations:* The Job-Submission Operations are the IPP operations that
350 create jobs and send document content, namely Print-Job, Print-URI, Create-Job, Send-
351 Document and Send-URI. See [STD92] for further information.

352 *Precedence:* The specification of the order or ranking of a series of instructions or attributes
353 from multiple sources referring to the same functionality. See Section 4.2 of this specification
354 for a description of the Attribute Precedence model.

355 *Print-stream pages:* The sequence of pages according to the definition of pages in the
356 language used to express the document data defined relative to the Input Document. See
357 Section 2.5 of [PWG5100.3] for more information.

358 *Production Printer:* A Printer that produces large quantities of high-quality output, that often
359 requires operator participation to make decisions as to the choice of Job and its parameters.

360 *Proof Print Job:* A Proof Print Job is a Retained Job that the Printer retains (until removed
361 by a Delete-Job or Purge-Jobs operation or aged out by the Printer using a different policy
362 than for ordinary completed jobs) after printing a proof so that a copy of it can be printed any
363 time after it has been proofed using the Reprocess-Job or Resubmit-Job operations, rather
364 than aging the Job out after an implementation-defined period.

365 *Raster image:* A binary representation of an image.

366 *Retained Job:* A Retained Job is a Job that the Printer retains in the so-called Job Retention
367 Phase (see [STD92] section 5.3.7.2 Partitioning of Job States) in the job's terminal state
368 ('completed', 'aborted', or 'canceled') after processing it, for an implementation-defined
369 period (including zero seconds) or removed by an explicit Delete-Job or Purge-Jobs
370 operation. An exact copy of a Retained Job can be processed using a Reprocess-Job
371 operation. A modified copy of a Retained Job can be processed using a Resubmit-Job
372 operation.

373 *RIP:* Raster Image Processor - a page description language interpreter.

374 *Saved Job:* A Saved Job is a Retained Job that the Printer retains indefinitely (until removed
375 by a Delete-Job or Purge-Jobs operation) so that a copy of it can be reprinted any time using
376 the Reprocess-Job or Resubmit-Job operations, rather than aging the Job out after an
377 implementation-defined period.

378 **2.5 Acronyms and Organizations**

379 *IANA:* Internet Assigned Numbers Authority, <http://www.iana.org/>

380 *IETF*: Internet Engineering Task Force, <http://www.ietf.org/>

381 *ISO*: International Organization for Standardization, <http://www.iso.org/>

382 *PWG*: Printer Working Group, <http://www.pwg.org/>

383 **3. Requirements**

384 In order to satisfy the PWG Process/3.0 [PWG_PROC], the following requirements for JPS2
385 are included in this section:

386 (a) A rationale for developing this IPP Job and Printer Operations - Set2 (JPS2)
387 specification;

388 (b) A set of use cases for IPP JPS2;

389 (c) A set of design requirements for IPP JPS2.

390 **3.1 Rationale for IPP Job and Printer Extensions – Set 2 v2.0**

391 IETF and PWG IPP printing standards define:

392 (a) A rationale for an abstract model of printing (to support alternate encodings and
393 protocols) in section 3 of the IETF IPP Rationale [RFC2568];

394 (b) A set of design goals for submitting and canceling Jobs in a printing protocol in section
395 3.1.4 'Submitting a Print Job', section 3.1.6 'Canceling a Print Job' (for End User), and
396 section 3.2.2 'Changing Print and Job Status' (for Operator) of the IETF IPP Design
397 Goals [RFC2567];

398 (c) An abstract model of a Print Service (i.e., ISO DPA Logical Printer) and a Print Device
399 (i.e., ISO DPA Physical Printer) in section 3.1 of IETF IPP/1.1 [STD92];

400 (d) A set of abstract operations for canceling or deleting Print Jobs in section 4.3.3
401 'Cancel-Job Operation' (for End User) and section 4.2.9 'Purge-Jobs Operation' (for
402 Operator) of IETF IPP/1.1 [STD92] and section 4.2 'Cancel-Current-Job Operation'
403 (for Job Owner or Operator) of IETF IPP Job and Printer Administrative Operations
404 [RFC3998];

405 (e) A set of abstract operations for reprinting Print Jobs in section 4.3.7 'Restart-Job
406 Operation' (same job-id, overwrites accounting data) of IETF IPP/1.1 [STD92] and
407 section 4.1 'Reprocess-Job Operation' (new job-id, original processing instructions)
408 of IETF IPP Job and Printer Administrative Operations [RFC3998];

409 (f) A set of abstract operations for controlling Print Jobs in section 3.3.5 'Hold-Job
410 Operation' (Job Owner and Operator) and section 3.3.6 'Release-Job Operation' (Job
411 Owner and Operator) of IETF IPP/1.1 [STD92] and section 4.3.1 'Suspend-Current-

412 Job Operation' (Job Owner and Operator) and section 4.3.2 'Resume-Job Operation'
413 (Job Owner and Operator) of IETF IPP Job and Printer Administrative Operations
414 [RFC3998]; and

415 (g) A set of abstract attributes for production printing features in PWG IPP Production
416 Printing Attributes - Set1 [PWG5100.3].

417 Some IPP Printers already support proofing, saving, and reprinting of large Print Jobs as
418 well as canceling of sets of selected Print Jobs via vendor proprietary operations and
419 attributes.

420 Therefore, this IPP Job and Printer Extensions – Set 2 v2.0 Specification should:

421 (1) Support proofing of Print Jobs in IPP Job Creation operations;

422 (2) Support saving of Print Jobs in IPP Job Creation operations;

423 (3) Support reprinting saved or proofed Print Jobs with different processing
424 instructions;

425 (4) Support canceling multiple Print Jobs in single IPP operations;

426 (5) Support the management, configuration, and maintenance of these extended
427 IPP Printers;

428 (6) Encourage adoption of modern IPP-based printing infrastructures; and

429 (7) Discourage the proliferation of vendor proprietary IPP operations and
430 attributes that damage IPP interoperability by duplicating IETF or PWG IPP
431 standard operations and attributes.

432 **3.2 Use Cases**

433 **3.2.1 Proof Print**

434 Alice, Bob, and Charlie work in the system engineering department of a large software
435 vendor. They collaborate to find, describe, and evaluate software feature requirements for
436 financial management tools in their requirements database.

437 Alice is an artist and chooses their standard fonts and writes style sheets and layout guides
438 for their software requirements specifications. Bob is a quiet, steady worker and an excellent
439 proofreader. Charlie is a good talker who does the interviewing of the marketers and
440 engineers.

441 Once a month, Charlie extracts from their database all of the detailed software requirements
442 for each project into a spreadsheet. He also extracts all the high-level software requirements
443 into a word processing document. Charlie then submits a single Print Job with two

444 Documents [PWG5100.5] (the spreadsheet and the word processing document) for a proof
445 print of 3 copies (single-sided and portrait).

446 Alice searches for layout and visual content errors, while Bob looks for typos and missing
447 words. Charlie commits their fixes to the database, regenerates the source documents, and
448 does another cycle of proof print.

449 Finally, Charlie wants to produce 60 copies (2-up, two-sided, and landscape) of the retained
450 proof Print Job. So, he reprints the saved Print Job (without sending the document data
451 again) but specifying overrides of some processing instructions.

452 **3.2.2 Job Save**

453 Max and Nancy work in Human Resources at a large company. Twice every year they have
454 to put out a comprehensive guide to the current benefits for all company employees. They
455 do all their proofing electronically in softcopy on their workstations. So, when they're ready,
456 Max submits a master Print Job that requests Job saving and an initial run of 50 copies.

457 Nancy and Max distribute these copies via interoffice mail with a cover note that includes
458 the "printer-uri" and "job-id" for the saved master Print Job, suggesting that some employees
459 may wish to print extra copies for their families.

460 **3.2.3 Reprint Job**

461 Sam is an operator in the 'glasshouse' print room of a large company. End users can submit
462 Print Jobs to some of his managed printers, but all their jobs are placed on hold for later
463 manual scheduling and release by the Operator, per site policy.

464 Sam decides when to run various held jobs, loads required media, powers up finishing
465 devices, etc. For example, a Print Job may request special handling for one copy stapled on
466 plain paper, one copy on overhead slide media, and several copies on colored paper with
467 nice covers and binding, in a "job-message-to-operator" attribute [PWG5100.3]. These
468 special handling instructions mean that the Print Job has to be run once (plain paper) and
469 reprinted twice (slides and colored paper), since IPP doesn't support per-copy processing
470 instructions in the same Print Job execution.

471 **3.3 Exceptions**

472 Provide exceptions for the use cases using the casual use case format.

473 None in original IPP Job and Printer Extensions – Set 2 v2.0...

474 **3.4 Out of Scope**

475 Provide a list of out of scope use cases and other possibly related areas.

476 None in original IPP Job and Printer Extensions – Set 2 v2.0...

477 **3.5 Design Requirements**

478 This IPP Job and Printer Extensions – Set 2 v2.0 design should:

- 479 (1) Follow the naming conventions defined in IETF IPP/1.1 [STD92], including
480 keyword value (lowercase) and hyphenation requirements;
- 481 (2) Optimize compatibility with existing IETF and PWG IPP operations when
482 making design decisions in defining new operations and attributes;
- 483 (3) Define new proof print attributes;
- 484 (4) Define new Job saving attributes;
- 485 (5) Define a new Cancel-Jobs operation (for Operator);
- 486 (6) Define a new Cancel-My-Jobs operation (for Job Owner);
- 487 (7) Define a new Close-Job operation (for Job Owner);
- 488 (8) Define a new "job-ids" operation attribute for existing Get-Jobs and Purge-Jobs
489 operations and new Cancel-Jobs and Cancel-My-Jobs operations that
490 contains a list of target Print Jobs; and
- 491 (9) Define a new Resubmit-Job operation (for Job Owner or Operator) for
492 reprinting a saved Print Job with new processing instructions.
493

494 **4. Semantics Common to More Than One Attribute**

495 **4.1 Guaranteed Protocol Precedence Over the PDL and Queue Overrides**

496 The IPP "pdl-override-supported" attribute [STD92] has a new 'guaranteed' value which a
497 Printer implementation uses to indicate that it can guarantee that Job Template attribute
498 supplied in the protocol will override corresponding instructions in the PDL document data.
499 The existing values for this attribute are 'not-attempted' and 'attempted' which are weaker
500 than 'guaranteed'.

501 IPP does not preclude multiple Printer objects representing a single output device, i.e., so-
502 called "device fan-in". [RFC2911] describes device fan-in in detail and also introduces the
503 concept of "Printer fan-in" in which multiple Printer objects represent a single Printer object,
504 each with the ability to accept IPP requests. "Printer fan-in" is described more fully in
505 [RFC3998]. A system with multiple queues can be represented as separate Printer objects
506 for each queue, using either device fan-in or Printer fan-in depending on implementation.
507 The administrator can configure each such Printer object with different policies, including
508 supported and default attributes. Each Printer can also have a different access control list,
509 as well.

510 Sometimes, the system administrator needs to set up a Printer object that will override one
511 or more attributes with a single fixed value for each attribute. These are called "queue
512 overrides". The administrator can configure a Printer that supports the 'guaranteed' value of
513 "pdl-override-supported" to achieve a queue override for the "xxx" attribute by configuring
514 the "xxx-supported" Printer attribute with only a single value. That value will not only override
515 the PDL, but it will also force the Job to have that same value when queried or processed.
516 See the description of the "pdl-override-supported" attribute in Section 11.1 of this volume.

517 **4.2 Attribute Precedence**

518 This section defines the precedence rules for Queue Override attributes, Page Override
519 attributes, Document Override attributes, attributes supplied in the protocol, PDL
520 instructions, and Printer object defaults. Since each attribute can be specified for all of these
521 levels, it is important to define which level takes precedence when the same attribute occurs
522 at different levels with differing values.

523 The attribute precedence model has the following features:

- 524 1. In principle, each defined attribute can occur at each of the precedence levels.
- 525 2. Attributes can be introduced and modified at different points in the Job workflow, e.g.,
526 in the application, print driver, submission Client, protocol, and Printer.
- 527 • Attributes are supplied by different agents in the system: application, user, print
528 driver, administrator, operator, Printer object, and the output device hardware.

529 • Attributes are supplied at different points in time: PDL generation, Job
530 submission, Job acceptance, Job pending, Job processing.

531 3. Attributes can be introduced and modified at different points in the Job workflow, e.g.,
532 in the application, print driver, submission Client, protocol, and Printer.

533 The following levels of precedence are defined in order of decreasing priority:

534 1. **queue override** - The value that the Printer enforces for any Job submitted to it (see
535 section 4.1). Set by the administrator when configuring the Printer by setting an "xxx-
536 supported" Printer attribute to contain a single value, i.e., the override value. Example:
537 the administrator sets the Printer's "sides" = 'two-sided-long' so that all Jobs submitted
538 to that (logical) Printer are printed two-sided flipped along the long edge.

539 Note: The queue override level is only available for Printers that support the
540 'guaranteed' value for its "pdl-override-supported" attribute (see section 3.1 of this
541 specification). All other levels are available for all Printers independent of the "pdl-
542 override-supported" value.

543 2. **page override programming** - A special "overrides" collection Job Template
544 attribute that contains the attributes that are to have the page override status (see
545 [PWG5100.6]). Set by the Client when submitting a Job either in the protocol or set
546 by the user or operator after the Job has been accepted either using the Set-Job-
547 Attributes operation [RFC3380], or by the operator using means local to the Printer.
548 Example: "overrides" = {"page-number" = '1'; "media" = 'letterhead'}

549 3. **protocol Job object attribute** - The Job Template attribute submitted in the protocol
550 (IPP, LPR, etc.). Set by the Client when submitting a Job in the protocol or set by the
551 user or operator after the Job has been accepted either using the Set-Job-Attributes
552 operation [RFC3380], or by the operator using means local to the Printer. Examples:
553 "media" = 'na-letter' and "copies" = '2'.

554 4. **PDL document data** - an instruction in the PDL document data. Set by the application
555 or print driver that created the PDL. Example: PostScript setPageDevice specifying
556 na-letter media.

557 5. **PDL Init File data** - a file that the Printer uses to initialize the PDL Interpreter before
558 it starts interpreting each document in a Job. See description of "pdl-init-file" Job
559 Template attribute in Section 7.10 of this specification. It is immaterial how this file is
560 specified, whether it be by a queue override, Job object attribute or Printer default –
561 the precedence of the contents of this file is at this level.

562 6. **printer default** - a Printer "xxx-default" attribute that is applied by the Printer provided
563 that none of the higher levels have supplied a value. The Printer implementation
564 MUST supply values for all of the Printer's "xxx-default" attributes that reflect the out-
565 of-the-box action by the output device. For example, if the output device will use
566 media from the large-capacity input tray if not directed otherwise, the implementation
567 MUST supply the Printer's "media-default" attribute with the 'large-capacity' keyword

568 value without requiring the administrator to configure that value. The implementation
569 MUST allow the administrator to configure the Printer's "xxx-default" attributes to
570 other values, if other values are supported by the implementation. Example: The
571 administrator changes the Printer's "media-default" from 'large-capacity' to 'na-letter'.

572 Note: Because of the requirement that the implementation supply pre-configured
573 values for the Printer's "xxx-default" attributes, there is no need for a lower
574 "hardware default" precedence level.

575 **4.3 Job Save and Reprint OPTIONAL Feature**

576 The Job Save and Reprint Feature is additional OPTIONAL functionality to allow a user to
577 save a print Job as part of Job processing and print a copy of it at another time. A Client
578 requests a Printer to save a print Job by supplying the "job-save-disposition" (collection) Job
579 Template attribute (see section 7.9) when submitting the Job. In this case, the Printer retains
580 the Job indefinitely in the so-called Job Retention Phase [STD92] in the Job's terminal state
581 ('completed', 'aborted', or 'canceled') after processing it, rather than aging the Job out after
582 an implementation-defined period. In other words, a Saved Job is just a Retained Job that
583 the Printer is retaining indefinitely. When saving a Job, a user MAY specify saving the
584 Document Data, and specify the format in which the print data is saved. These semantics
585 necessitate the definition of additional values for the "job-state-reasons" Job Description
586 attribute, the "job-save-printer-make-and-model" Job Description attribute (see section 9.1),
587 and the use of the Reprocess-Job and Resubmit-Job operations to print these saved Jobs.

588 This section, in conjunction with the description of the "job-save-disposition" Job Template
589 attribute (see section 7.9) fully describe the Job Save and Reprint Feature. If a Printer
590 supports the Job Save and Reprint Feature, then it MUST also support the Proof Print
591 Feature (see section 4.4). See section 12.4 Conformance Requirements for the OPTIONAL
592 "job-save-disposition" Job Template attribute for additional conformance requirements for
593 clients and Printers.

594 **4.3.1 Reprinting Saved Jobs**

595 This section defines the method by which to reprint a copy of the Saved Job using the
596 Reprocess-Job and Resubmit-Job operations. The Reprocess-Job operation is defined in
597 [RFC3998] and Resubmit-Job is defined in this document and operates on any Retained
598 Job, whether or not it is a Saved Job.

599 **4.3.1.1 Reprinting using the Reprocess-Job operation**

600 The Reprocess-Job operation [RFC3998] re-processes a copy of any Retained Job after
601 processing was completed, canceled, or aborted. In order to prevent the Printer from aging
602 out a Retained Job, the Client can supply a "job-save-disposition" Job Template attribute
603 (see section 7.9) in a Job submission. In this case the Printer retains the Job (until removed
604 by a Delete-Job or Purge-Jobs operation) as a Saved Job, so that a Client can reprint the
605 Job using Reprocess-Job any time subsequently. When reprinting a Saved Job, the Printer
606 MUST NOT copy the "job-save-disposition" attribute to the copy; otherwise, the Job would

607 be saved again. Similarly, when reprinting a Proof Print Job, the Printer MUST NOT copy
608 the “proof-print” attribute to the Job copy; otherwise, the Job would be proofed again.

609 **4.3.1.2 Reprinting using the Resubmit-Job operation**

610 The Resubmit-Job operation (see section 5.4 below for a complete description) re-processes
611 a copy of any Retained Job in the same way as Reprocess-Job (see section 4.3.1.1), with
612 the addition of being able to supply additional operation and Job Template attributes that will
613 affect the processing of that copy of the Job by either override the values of existing
614 attributes or providing additional attributes. The Resubmit-Job operation has the same
615 structure as the Print-URI operation [STD92] except that the “job-id” (integer(1:MAX))
616 operation attribute MUST take the place of the “document-uri” (uri) operation attribute.

617 **4.4 Job Proof Print REQUIRED Feature**

618 The Proof Print Feature is additional REQUIRED functionality to allow a user to print a Proof
619 Print Job and to save it as part of Job processing in such a way that users can submit a
620 request to print a copy of the Proof Print Job at a later time. A Client requests a Printer to
621 print and save a Proof Print Job by supplying the “proof-print” (collection) Job Template
622 attribute (see section 7.11) when submitting the Job. In this case, the Printer retains the
623 Proof Print Job indefinitely in the so-called Job Retention Phase [STD92] in the Job’s
624 terminal state (‘completed’, ‘aborted’, or ‘canceled’) after processing it, rather than aging the
625 Job out after an implementation-defined period. In other words, a Proof Print Job is just a
626 Retained Job that the Printer is retaining indefinitely. A Client can then request the Printer
627 to reprint a copy of the Proof Print Job using the Reprocess-Job operation (using the original
628 “copies” and “media” attributes - see section 4.3.1.1) and a modified copy of the Job using
629 the Resubmit-Job operation (see section 4.3.1.2). See section 12.5 Conformance
630 Requirements for the REQUIRED “proof-print” Job Template attribute for additional
631 conformance requirements for clients and Printers.

632 **5. New Attributes**

633 **5.1 Operation Attributes**

634 This section defines additional Operation attributes for existing IPP operations.

635 **5.1.1 job-password (octetString(255)) for Job Creation operations**

636 This attribute allows a user to perform Secure Print. The user enters a password in the Job
637 submitting application which is encrypted by the Client using one of the methods specified
638 by the “job-password-encryption-supported” attribute. The encrypted password is sent to the
639 Printer as the value of the “job-password” attribute. If a “job-password” value is provided,
640 other than a zero-length string, the Printer MUST hold the Job in the ‘pending-held’ state,
641 and the ‘job-password-wait’ value is added to the “job-state-reason” attribute.

642 The user enters the same password at the device to release the Job for printing. The Printer
643 uses the same encryption method specified in the "job-password-encryption" attribute on
644 this password. The Printer MUST resume the print Job when the locally-supplied encrypted
645 password matches the value of the "job-password" attribute. The method in which the
646 password is entered and validated at the Printer is implementation dependent.

647 The "job-password" attribute may OPTIONALLY be included in the request of the following
648 Job Creation operations: Print-Job, Print-URI, and Create-Job. The "job-password" attribute
649 value MUST NOT be returned in a Get-Job-Attributes response.

650 Other jobs may be printed before the release of the Secure Print Job from the 'pending-held'
651 state. If the Secure Print Job is released by the user while another Job is printing, the Secure
652 Job MUST NOT resume printing until the current Job is done printing. The Secure Job
653 SHOULD be the next Job printed after the current job, unless there is another Job in the
654 Printer which has a higher priority than the Secure Job as determined by the "job-priority"
655 attribute.

656 **5.1.2 job-password-encryption (type2 keyword | name(MAX)) for Job Creation** 657 **operations**

658 This attribute specifies the type of encryption used for the value of the "job-password"
659 attribute in the request of the following Job Creation operations: Print-Job, Print-URI, and
660 Create-Job. The Client MUST supply this operation attribute whenever the "job-password"
661 attribute is supplied.

662 The valid keyword values are the same as the valid values for the "job-password-encryption-
663 supported" attribute (See description below in section 5.4.14).

664 **5.1.3 job-ids (1setOf integer(1:MAX)) for the Get-Jobs operation**

665 This attribute is defined for use with the Get-Jobs operation [STD92]. A Client MUST be able
666 to supply and a Printer MUST support the "job-ids" operation attribute in a Get-Jobs
667 operation in order to claim support of this Job and Printer Extensions - Set 2 Specification,
668 respectively. See also section 10.2 job-ids-supported (boolean) Printer Description attribute.

669 The "job-ids" Operation attribute, if supplied, specifies a list of target jobs to be returned,
670 rather than all jobs, in the response to the Get-Jobs operation [STD92]. If the Client supplies
671 the "job-ids" Operation attribute, the Client MUST NOT also supply any of the following
672 Operation attributes in the same request: "limit", "my-jobs", or "which-jobs". If the Client does
673 supply the "job-ids" Operation attribute with any of the following Operation attributes: "limit",
674 "my-jobs", or "which-jobs", the Printer MUST reject the request and return the 'client-error-
675 conflicting-attributes' status code [STD92].

676 **5.1.4 job-ids (1setOf integer(1:MAX)) for the Purge-Jobs operation**

677 This attribute specifies a list of target jobs to be purged, rather than all jobs. If this attribute
678 is not supplied, the Printer MUST purge all jobs. This attribute is defined for use with the

679 Purge-Jobs operation [STD92]. If a Client or Printer support the Purge-Jobs operation, such
680 a Client MUST be able to supply and a Printer MUST support the "job-ids" operation in the
681 Purge-Jobs operation in order to claim support of this IPP Job and Printer Extensions – Set
682 2 v2.0 Specification, respectively.

683 **5.2 Job Status Attributes**

684 **5.2.1 job-save-printer-make-and-model (text(127))**

685 This attribute identifies the make and model of the output device which saved this job. The
686 values are the same as the corresponding "printer-make-and-model" Printer Description
687 attribute [STD92]. If this attribute is present in the saved Job, then only Printers that have
688 the same make and model will be able to print the saved Job with identical appearance.
689 Other make and models MAY be able to print the job, but not necessarily with identical
690 appearance, provided that the Printer supports the "save-document-format" value of the
691 saved job. If this attribute is not present in the saved Job Instructions and the Job object
692 after saving, then the saved Job was saved in a format that can be printed on any output
693 device and will generate the same appearance provided that the Printer supports the "save-
694 document-format" value of the saved job.

695 If the Printer implementation supports the "job-save-disposition" Job Template attribute in
696 section 7.9, then it is REQUIRED that the Printer support the "printer-make-and-model"
697 Printer Description attribute.

698 **5.3 Job Template Attributes**

699 Job Template attributes describe Job processing behavior and conform to a set of rules. See
700 [STD92] for the complete text of the rules that apply to each Job Template attribute called
701 "xxx".

702 **5.3.1 feed-orientation (type2 keyword)**

703 This attribute specifies the media edge which is fed into the print engine from the paper tray.
704 Long-edge-first is the preferred method of feeding media to attain the fastest printing speed.
705 Certain media will have adverse effects when fed from a certain direction; for instance, some
706 labels will peel off in the paper path when fed long-edge-first, but not when fed short-edge-
707 first. The feed orientation also may allow the Job to be finished in more acceptable ways; for
708 instance, a stationary finishing stapler may provide a preferred stapling location when the
709 media is fed short-edge-first.

710 When this attribute is specified, the Printer selects media that has already been loaded in
711 the requested orientation. If the media is not currently loaded in the requested orientation,
712 the Job may enter the 'processing-stopped' state with a "job-state-reason" of 'resources-are-
713 not-ready'.

714 Standard keyword values are:

Keyword	Description
'long-edge-first'	The specified media is fed using the long edge first.
'short-edge-first'	The specified media is fed using the short edge first.

715 This attribute allows a PDL interpreter to determine which way to send the image data to the
716 frame buffer for imposition on the media. Although Postscript supports this attribute as a
717 PDL construct, support in other PDLs such as PCL and TIFF are dependent on the
718 implementation. Therefore, this attribute is defined to be specified as a Job Template
719 attribute such that printers may use this feature with PDLs other than Postscript. Some
720 Printer implementations may be able to internally determine the best feed orientation to use
721 so that if this attribute was sent over the wire to the printer, the attribute would be ignored.

722 This attribute has no special interaction with the "orientation-requested" attribute. It is
723 possible to print a portrait document on either SEF (short edge feed) or LEF (long edge feed)
724 paper, and likewise for landscape documents. However, this may affect staple placement
725 and other finishing, depending on the device's capabilities.

726 This attribute applies as to how the media is loaded into the tray rather than the media itself
727 and is therefore a job-level attribute rather than a media collection member attribute. This
728 attribute may be used with "overrides" just as any other Job Template attribute (see
729 [PWG5100.6]).

730 **5.3.2 font-name-requested (name(MAX))**

731 This attribute enables a Client to specify what default font name the Printer MUST use to
732 print a Job if the document data is in a format that does not have inherent font information
733 (e.g., 'text/plain'). For document formats which have inherent font information (such as
734 PostScript), this attribute will be ignored and will NOT override that information.

735 For some document formats (such as 'application/postscript'), the desired default font name
736 of the print-stream pages is specified within the document data. This information is
737 generated by a device driver prior to the submission of the print Job. Other document formats
738 (such as 'text/plain') do not include the notion of desired font name within the document data.
739 In the latter case it is possible for the Printer object to bind the desired font name to the
740 document data after it has been submitted. It is expected that a Printer object would only
741 support "font-name-requested" for some document formats (e.g., 'text/plain' or 'text/html')
742 but not others (e.g., 'application/postscript'). This PDL-dependent behavior is no different
743 than any other Job Template attribute since a Printer object may support or not support any
744 Job Template attribute based on the document format supplied by the client. However, a
745 special mention is made here since it is very likely that a Printer object will support "font-
746 name-requested" for only a subset of the supported document formats.

747 This attribute can be specified as a Document Override that affects the Input-Document. The
748 use of this attribute on a Page override basis is not supported since changing the font
749 characteristics can affect the pagination.

750 NOTE: The use of the “xxx-requested” pattern for attribute names indicates that the
751 value of the attribute is to be used ONLY in the case when a value for the attribute
752 is not contained within the source document. This value will override the printer’s
753 default value but will not override the source document’s value. See the description
754 of the “orientation-requested” Job Template attribute [STD92].

755 **5.3.3 font-size-requested (integer (1:MAX))**

756 This attribute enables a Client to specify what default font size the Printer MUST use to print
757 a Job if the document data is in a format that does not have inherent font information (e.g.,
758 ‘text/plain’). For document formats which have inherent font information (such as PostScript),
759 this attribute will be ignored and will NOT override that information.

760 For some document formats (such as 'application/postscript'), the desired default font size
761 of the print-stream pages is specified within the document data. This information is
762 generated by a device driver prior to the submission of the print Job. Other document formats
763 (such as 'text/plain') do not include the notion of desired font size within the document data.
764 In the latter case it is possible for the Printer object to bind the desired font size to the
765 document data after it has been submitted. It is expected that a Printer object would only
766 support "font-size-requested" for some document formats (e.g., 'text/plain' or 'text/html') but
767 not others (e.g., 'application/postscript'). This PDL-dependent behavior is no different than
768 any other Job Template attribute since a Printer object may support or not support any Job
769 Template attribute based on the document format supplied by the client. However, a special
770 mention is made here since it is very likely that a Printer object will support "font-size-
771 requested" for only a subset of the supported document formats.

772 The “font-size-requested” units are points, equivalent to 1/72nd of an inch.

773 This attribute can be specified as a Document Override that affects the Input-Document. The
774 use of this attribute on a Page override basis is not supported since changing the font
775 characteristics can affect the pagination.

776 Note: The use of the “xxx-requested” pattern for attribute names indicates that the
777 value of the attribute is to be used ONLY in the case when a value for the attribute
778 is not contained within the source document. This value will override the printer’s
779 default value but will not override the source document’s value. See the description
780 of the “orientation-requested” Job Template attribute [STD92].

781 **5.3.4 job-delay-output-until (type2 keyword | name(MAX))**

782 This attribute permits the Client to specify a time period in the future until which the Printer
783 is to delay the output. If the specified time period has not yet arrived, the Printer MUST set
784 the Job's "job-state-reasons" value to 'job-delay-output-until-specified'. However, the Printer
785 MAY perform processing before the time period arrives, but the Printer MUST NOT produce

786 any output until the time period arrives. When the time period arrives, the Job MUST become
 787 a candidate for output (including any processing required to produce the output).

788 Standard keyword values for named time periods are:

Keyword	Description
'no-delay-output'	There are no reasons to delay output
'indefinite'	The Job output is delayed indefinitely until a Client performs a Set-Job-Attributes operation [RFC3380] with either of the delay output Operation attributes: "job-delay-output-until" or "job-delay-output-until-time"
'day-time'	During the day
'evening'	During the evening
'night'	During the night
'weekend'	During the weekend
'second-shift'	During the second shift (after close of business)
'third-shift'	During the third shift (after midnight)

789 Even though a Job supplied with the "job-delay-output-until" Job Template attribute may be
 790 in the 'processing-stopped' state, the Client MUST NOT supply and the Printer MUST NOT
 791 support the Resume-Job ([RFC3998]) to move the Job out of the 'processing-stopped' state.
 792 The only way for a Client to alter the delay period for a Job and for the Printer to support
 793 altering the delay period for a Job is by supporting the Set-Job-Attributes operation
 794 [RFC3380]. See section 8.2 below.

795 The Client MUST NOT supply both the "job-delay-output-until" and "job-delay-output-until-
 796 time" (see section 7.5 below) Job Template attributes in a Job Creation request. If the Client
 797 supplies such a malformed request by supplying both, the Printer MUST reject the request
 798 and return the 'client-error-conflicting-attributes' status code [STD92].

799 Note: it is not an error for a Client to supply and a Printer to support a "job-hold-xxx"
 800 and a "job-delay-output-xxx" in the same Job Creation operation, since they control
 801 separate aspects of Job processing.

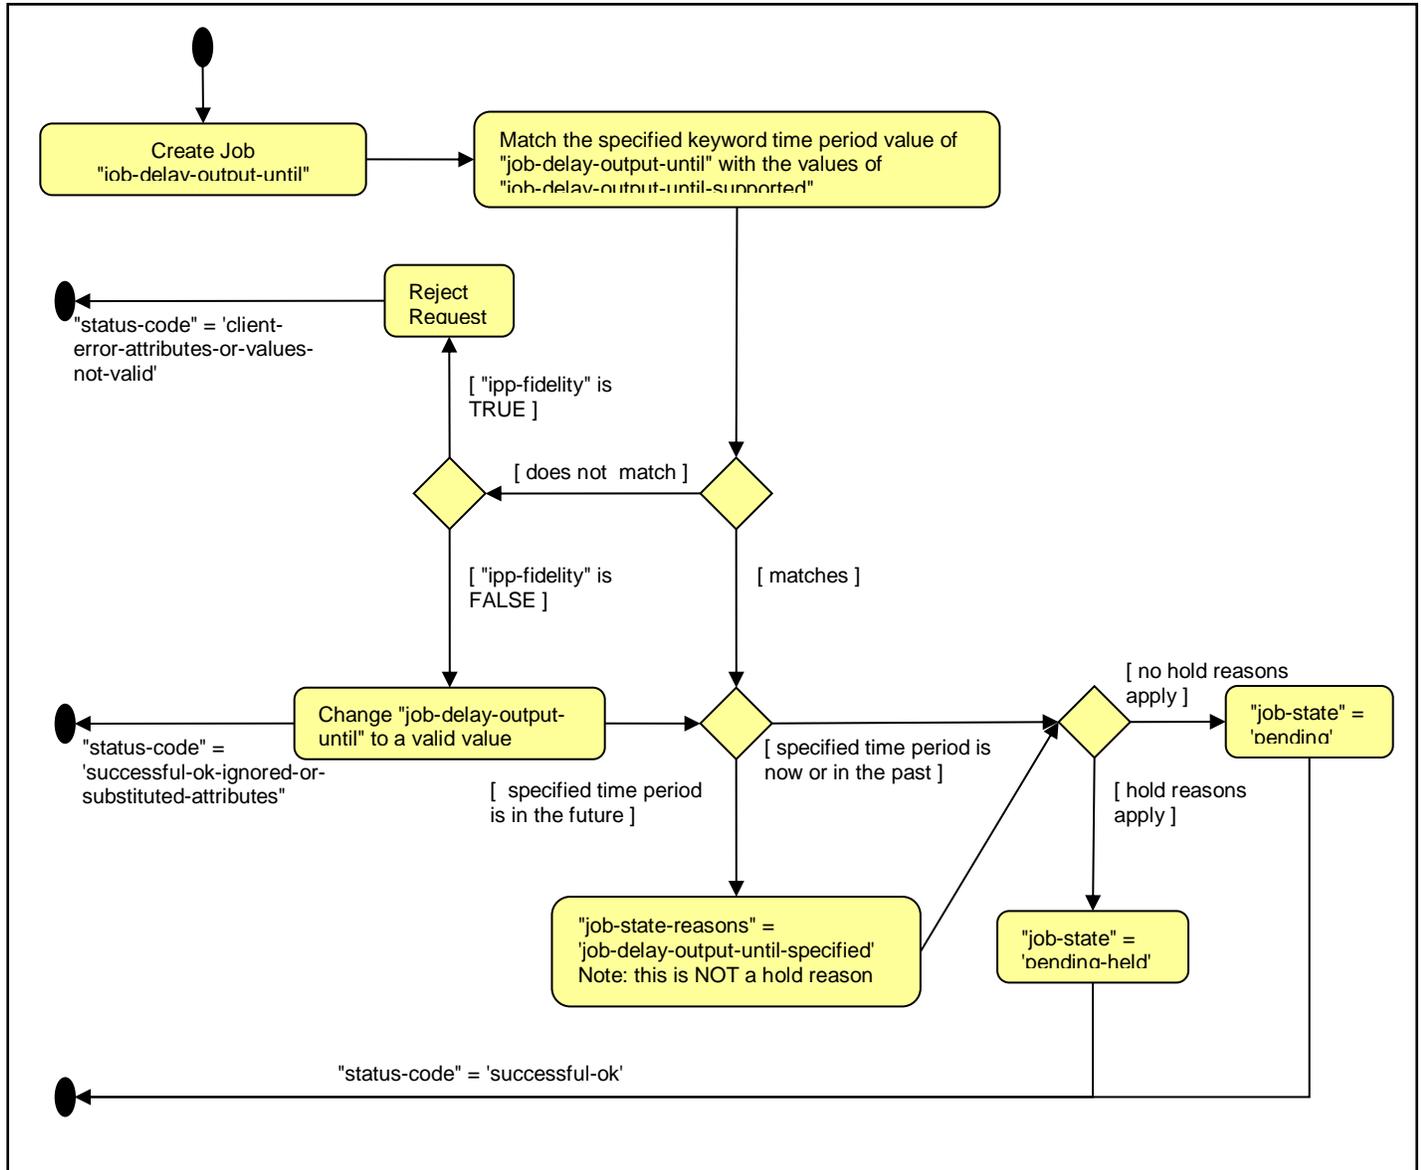

802 A Flow Diagram for Job Creation with the "job-delay-output-until" attribute is shown in Figure
 803 1 below. The semantics of the "job-delay-output-until" attribute are similar to the "job-hold-
 804 until" Job Template attribute [STD92] (see Table 5 below), except that for the "job-delay-
 805 output-until" attribute the Job is not put into the 'pending-held' state while waiting for the time
 806 period to arrive. Instead, the Printer MAY process the Job normally, i.e., by putting the Job
 807 into the 'pending' and 'processing' states. However, the Printer MUST NOT produce any

808 output until the specified time period arrives. If the Printer completes the processing and the
 809 specified time period has not yet arrived, the Printer MUST suspend the processing of the
 810 Job by putting the Job in the 'processing-stopped' state and MUST NOT delay processing
 811 or output of any other Jobs while waiting for the specified time period to arrive. When the
 812 time period does arrive, the Printer MUST remove the 'job-delay-output-until-specified' value
 813 from the Job's "job-state-reasons" attribute and MAY add the 'job-queued' [STD92] value to
 814 the Job's "job-state-reasons" attribute. Then the Job can be scheduled and processed, i.e.,
 815 the Job enters the 'processing' state and produces the output.

816 If the Printer implementation is not able to put such a delayed output Job into the 'processing-
 817 stopped' state and process other Jobs, the Printer implementation MUST behave identically
 818 to that of the "job-hold-until" attribute and put the Job into the 'pending-held' state
 819 immediately (instead of 'pending' and 'processing'), set the "job-state-reasons" to 'job-delay-
 820 output-until-specified' (instead of 'job-hold-until-specified'), and wait for the specified time
 821 period to arrive to begin processing the Job (see the description of the "job-hold-until"
 822 attribute [STD92]).

823 **Table 3 - Comparison of "job-delay-output-until" with "job-hold-until"**

Description	"job-delay-output-until"	"job-hold-until"
Initial Job states before the specified time period is reached	'pending', 'processing', 'processing-stopped'	'pending-held'
Job states when the specified time period is reached	'pending', 'processing'	'pending', 'processing'
"job-state-reasons" value	"job-delay-output-until-specified"	"job-hold-until-specified"

824

Figure 1 - Job Creation Operation Flow Diagram with "job-delay-output-until" specified

825

826

827 **5.3.5 job-delay-output-until-time (dateTime)**

828 This attribute permits the Client to specify a date and time in the future after which the Printer
829 is to delay the output. If the specified date and time has not yet arrived, the Printer MUST
830 set the Job's "job-state-reasons" value to 'job-delay-output-until-specified'. However, the
831 Printer MAY perform processing before the specified date and time occurs, but the Printer
832 MUST NOT produce any output until the date and time occurs.

833 A Flow Diagram for Job Creation with the "job-delay-output-until-time" attribute is shown in
834 Figure 2 below. A Time Sequence Diagram for a Job with "job-hold-until-time", a Job with
835 "job-delay-output-until-time", and 4 ordinary print Jobs is shown in Figure 4 below. The
836 semantics of the "job-delay-output-until-time" attribute are similar to the "job-hold-until-time"

837 Job Template attribute (see Section 7.6 and Table 6, except that for the "job-delay-output-
 838 until-time" attribute the Job is not put into the 'pending-held' state while waiting for the date
 839 and time to occur. Instead, the Printer MAY process the Job normally (i.e., by putting the
 840 Job into the 'pending' and 'processing' states). However, the Printer MUST NOT produce
 841 any output until the specified date and time occurs. If the Printer completes the processing
 842 and the specified date and time has not yet occurred, the Printer MUST suspend the
 843 processing of the Job by putting the Job in the 'processing-stopped' state and MUST NOT
 844 delay processing or output for any other Jobs while waiting for the specified date and time
 845 to occur. When the date and time does occur, the Printer MUST remove the 'job-delay-
 846 output-until-specified' value from the Job's "job-state-reasons" attribute and MAY add the
 847 'job-queued' [STD92] value to the Job's "job-state-reasons" attribute. Then the Job can be
 848 scheduled and processed, i.e., the Job enters the 'processing' state and produces the output.

849 If the Printer implementation is not able to put such a delayed output Job into the 'processing-
 850 stopped' state and process other Jobs, the Printer implementation MUST behave identically
 851 to that of the "job-hold-until-time" attribute and put the Job into the 'pending-held' state
 852 immediately (instead of 'pending' and 'processing'), set the "job-state-reasons" to 'job-delay-
 853 output-until-specified' (instead of 'job-hold-until-specified'), and wait for the specified date
 854 and time to occur to begin processing the Job (see the description of the "job-hold-until-time"
 855 attribute in 7.6).

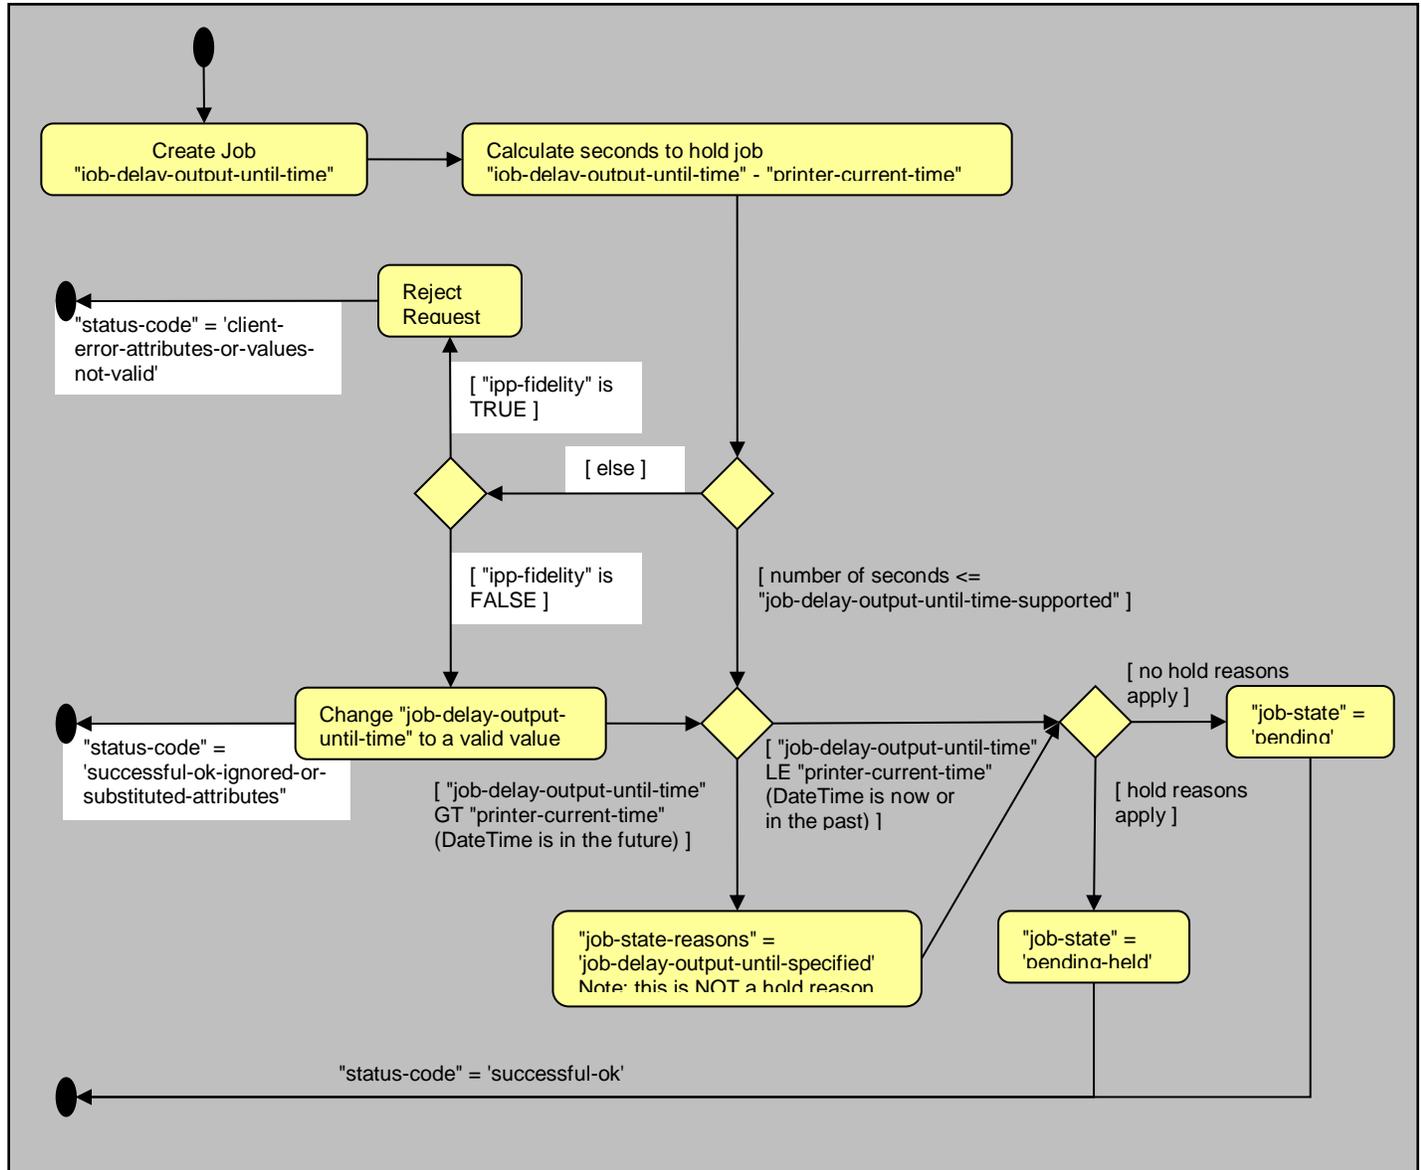

856 Even though a Job supplied with the "job-delay-output-until-time" Job Template attribute
 857 may be in the 'processing-stopped' state, the Client MUST NOT supply and the Printer
 858 MUST NOT support the Resume-Job ([RFC3998]) to move the Job out of the 'processing-
 859 stopped' state. The only way for a Client to alter the delay time for a Job and for the Printer
 860 to support altering the delay time for a Job is by supporting the Set-Job-Attributes operation
 861 ([RFC3380]). See section 8.2 below.

862 The Client MUST NOT supply both the "job-delay-output-until" (see section 7.4 above) and
 863 "job-delay-output-until-time" Job Template attributes in a Job Creation request. If the Client
 864 supplies such a malformed request by supplying both, the Printer MUST reject the request
 865 and return the 'client-error-conflicting-attributes' status code [STD92]. Note: it is not an error
 866 for a Client to supply and a Printer to support a "job-hold-xxx" and a "job-delay-output-xxx"
 867 in the same Job Creation operation, since they control separate aspects of Job processing.

868 **Table 4 - Comparison of "job-delay-output-until-time" with "job-hold-until-time"**

Description	"job-delay-output-until"	"job-hold-until"
Initial Job states before the specified time period is reached	'pending', 'processing', 'processing-stopped'	'pending-held'
Job states when the specified time period is reached	'pending', 'processing'	'pending', 'processing'
"job-state-reasons" value	"job-delay-output-until-specified"	"job-hold-until-specified"

869

870

871

Figure 2 - Job Creation Operation Flow Diagram with "job-delay-output-until-time" specified

872

5.3.5.1 Why there is no job-delay-output-until-time-default attribute

873

There is no “job-delay-output-until-time-default” attribute because it would either be a fixed date and time in the future or would have to be updated periodically. Neither seem useful enough to be worth the complexity.

874

875

876

5.3.6 job-hold-until-time (dateTime)

877

This attribute permits the Client to specify the date and time after which the Job MUST become a candidate for processing.

878

879 Note: The Client application has the choice to present the "job-hold-until-time" to the
880 end user as either a delta time (the amount of time until the Job is no longer held),
881 or a fixed time when the Job will no longer be held. The fixed time is represented
882 using the appropriate time zone(s) (usually the client's time zone, or the Printer's
883 time zone, or both if the Client is capable). See the description of "printer-current-
884 time" in [STD92].

885 If the Printer supports the "job-hold-until-time" attribute, the "job-hold-until" attribute MUST
886 also be supported. However, if the "job-hold-until" attribute is supported, the "job-hold-until-
887 time" attribute NEED NOT be supported. If the Printer supports the "job-hold-until-time"
888 attribute, the "printer-current-time" (dateTime) Printer Description attribute MUST also be
889 supported.

890 The Client MUST NOT supply both the "job-hold-until" and "job-hold-until-time" Job
891 Template attributes in a Job Creation request. If the Client supplies such a malformed
892 request by supplying both, the Printer MUST reject the request and return the 'client-error-
893 conflicting-attributes' status code [STD92]. Note: it is not an error for a Client to supply and
894 a Printer to support a "job-hold-xxx" and a "job-delay-output-xxx" in the same Job Creation
895 operation, since they control separate aspects of Job processing.

896 A Flow Diagram for Job Creation operations with the "job-hold-until-time" attribute is shown
897 in Figure 3 below. A Time Sequence Diagram for a Job with "job-hold-until-time", a Job with
898 "job-delay-output-until-time", and 4 ordinary print Jobs is shown in Figure 4 below. A Hold
899 Job request is sent by the Client with a "job-hold-until-time" value specified as a dateTime.
900 The Printer calculates the number of seconds between the "job-hold-until-time" value and
901 the "printer-current-time" value. If this number of seconds is NOT in the range specified by
902 the Printer's "job-hold-until-time-supported" attribute value, then the Printer either:

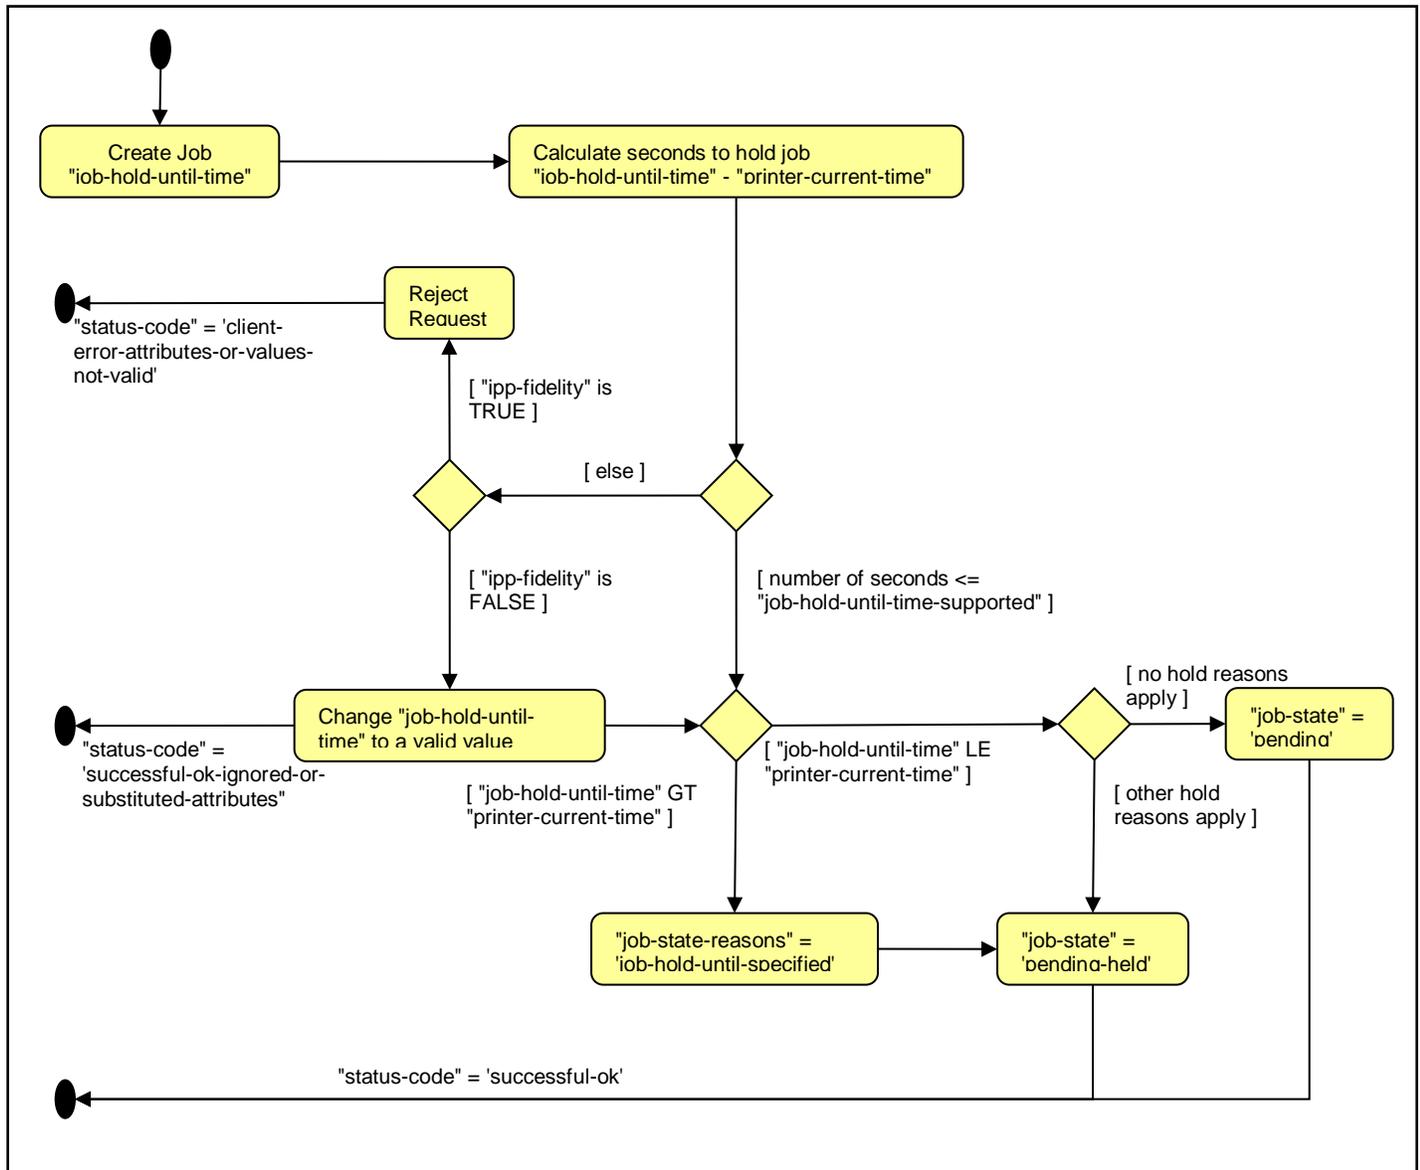

903 1. rejects the request with the 'client-error-attributes-or-values-not-supported' status
904 code [STD92] if the "ipp-attribute-fidelity" is 'true'; or

905 2. accepts the request with the 'successful-ok-ignored-or-substituted-attributes', if the
906 client-supplied "ipp-attribute-fidelity" is 'false'. Also, the Printer MUST return the "job-
907 hold-until-time" attribute and the client-supplied value in the Unsupported Attributes
908 group of the operation response. If the "job-hold-until-time" value is earlier than the
909 "printer-current-time" value plus the minimum value of "job-hold-until-time-
910 supported", the Printer MUST set the value of the Job's "job-hold-until-time" to the
911 current dateTime plus the minimum time. Also, if the "job-hold-until-time" value is later
912 than the "printer-current-time" value plus the maximum value of "job-hold-until-time-
913 supported", the Printer MUST set the value of the Job's "job-hold-until-time" to the
914 current dateTime plus the maximum time.

915 If the Job is accepted, the Printer then determines the state in which to place this Job. If the
916 dateTime value is equal to or sooner than the Printer's "printer-current-time" dateTime value,
917 then no hold is placed on the Job and the Job moves into the pending state (assuming there
918 are no other reasons to hold the Job).

919 If the value of this attribute specifies a time period that is in the future, the Printer 1) MUST
 920 add the 'job-hold-until-specified' value to the Job's "job-state-reasons" attribute, 2) MUST
 921 move the Job to the 'pending-held' state, and 3) MUST NOT schedule the Job for printing
 922 until the specified time arrives. When the specified time arrives, the Printer MUST remove
 923 the 'job-hold-until-specified' value from the Job's "job-state-reason" attribute and, and then
 924 if there are no other Job state reasons that keep the Job in the 'pending-held' state, the
 925 Printer MUST consider the Job as a candidate for processing by moving the Job to the
 926 'pending' state.

927

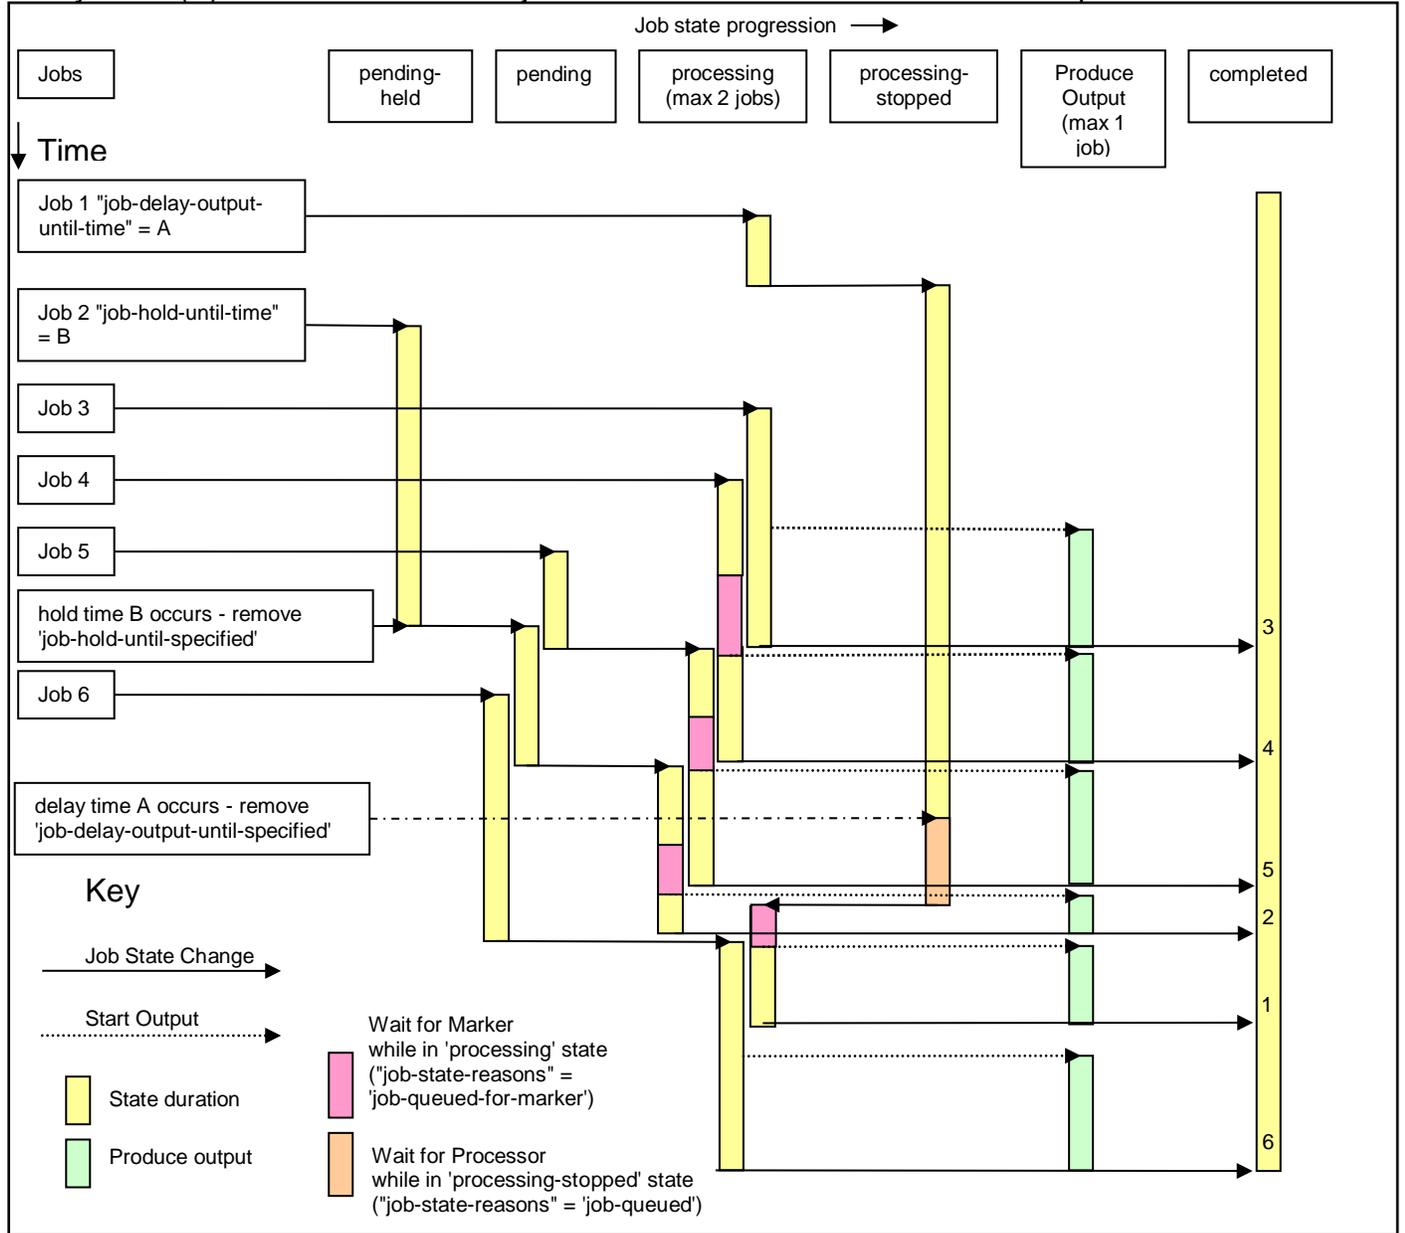

928

929

Figure 3 - Job Creation Operation Flow Diagram with "job-hold-until-time" specified

930

931 Figure 4 below shows a Time Sequence Diagram for an implementation of 6 Jobs, where
 932 Job 1 is a Job Delay Output Job that processes the Job partly before the delay date-time
 933 arrives, Job 2 is a Hold Job, and Jobs 3 through 6 are ordinary print Jobs that complete
 934 successfully. Jobs 3-5 are submitted before either of the Job Hold Time (B) and the Job
 935 Delay Time (A) occurs. Job 6 is submitted after the Job Hold Time (B) but before the Job
 936 Delay Time (A) occurs. OPTIONAL "job-state-reasons" values are shown in parenthesis.

937

938

Figure 4 - Time Sequence Diagram for 1 Hold, 2 Delay Output, and 4 normal Jobs

939

940 **5.3.6.1 Why there is no job-hold-until-time-default**

941 There is no "job-hold-until-time-default" attribute because it would either be a fixed time in
942 the future or would have to be updated periodically. Neither seem useful enough to be worth
943 the complexity.

944 **5.3.7 job-phone-number (uri)**

945 This attribute contains the contact telephone number for the Job. If supported, the Printer
946 MUST accept the 'tel:' URI scheme [RFC2806] and MAY accept other schemes, such as the
947 'fax:' scheme [RFC2806]. Any processing by the Printer of the "job-phone-number" attribute
948 is implementation-dependent.

949 **5.3.8 job-recipient-name (name(MAX))**

950 This attribute contains the name of the person that is to receive the output of the job. The
951 value of the "job-recipient-name" attribute is commonly printed on Job sheets printed with
952 the job. An example of another use of the "job-recipient-name" attribute is if the Printer
953 accesses a database to get Job delivery instructions for the recipient of a job. A zero-length
954 value indicates that there is no Job recipient name.

955 If the Client omits this attribute in a create request, the Printer MAY use the "job-recipient-
956 name-default" attribute value, unless it has not been configured by the administrator, or MAY
957 use the "authenticated user" name (see [MOD1.1] section 8.3), depending on
958 implementation.

959 **5.3.9 job-save-disposition (collection)**

960 This attribute is used to archive/save the Document Data of a job, such that the Job can be
961 re-printed on demand at some undefined time in the future. See also section 4.3 of this
962 specification for a detailed description of the Job Save and Reprint Feature. If the Printer
963 supports the "job-save-disposition" attribute for Saving Jobs, then it MUST also support the
964 "proof-print" attribute for proofing jobs. However, if the Printer supports the "proof-print"
965 attribute, it NEED NOT support the "job-save-disposition" attribute.

966 If a Printer object is able to save a Job in a particular document format, the Printer MUST be
967 able to process that document format for reprint using the Reprocess-Job and Resubmit-
968 Job operations. See section 12.4 Conformance Requirements for the OPTIONAL "job-save-
969 disposition" Job Template attribute for additional conformance requirements for clients and
970 Printers.

971 **5.3.9.1 Interaction with "job-hold-until" and "job-hold-until-time"**

972 The "job-hold-until" attribute causes the Job to be moved to the 'pending-held' state, which
973 prevents processing of the job. The "job-save-disposition" attribute on the other hand does
974 not become relevant until the Job is moved to the 'processing' state. These two attributes
975 can be used together in the same Job Creation operation with no adverse interactions.

976 The member attributes of the "job-save-disposition" attribute are:

977 **Table 5 - "job-save-disposition" member attributes**

Member Attribute Name	Request	Printer Support
save-disposition	MUST	MUST
save-info	MAY	MUST

978 **5.3.9.2 Interaction with "job-state-reasons"**

979 Many of the existing "job-state-reasons" attribute values can apply to a 'save-only' Job as
 980 well as a Job submitted for printing. If the value of the "job-disposition" attribute is 'save-
 981 only', the "job-state-reasons" attribute MAY be set with existing values such as 'job-
 982 incoming', 'resources-are-not-ready' (such as a font), 'job-interpreting', and 'job-queued'.
 983 Likewise, errors that occur on a saved Job MAY have existing "job-state-reasons" attribute
 984 values such as 'job-data-insufficient', 'document-access-error', 'submission-interrupted', 'job-
 985 canceled-by-user', 'aborted-by-system', etc.

986 There are also new four new "job-state-reasons" keyword values REQUIRED that support a
 987 saved Job -- 'job-saving', 'job-saved-successfully', 'job-saved-with-warnings', and 'job-
 988 saved-with-errors' -- and these have been added to the list defined above. The existing 'job-
 989 completed-successfully', 'job-completed-with-warnings', and 'job-completed-with-errors'
 990 values are also clarified in the list above for implementations that support the "job-save-
 991 disposition" Job Template attribute, in such a way that these values remain compatible with
 992 Printers and clients that do not support Job saving.

993 Table 14 enumerates the possible combinations of print and save success, warning, and
 994 error conditions. Note that two values occur only when there are print warnings/errors and a
 995 save error.

996 **Table 6 - Values of "job-state-reasons" attribute for various Job conditions**

	Not saving	Save was successful	Save was unsuccessful
Not printing	<not possible>	'job-completed-successfully'	'job-saved-with-errors'
Print successful	'job-completed-successfully'	'job-completed-successfully'	'job-saved-with-errors'
Print warnings	'job-completed-with-warnings'	'job-completed-with-warnings'	'job-completed-with-warnings', 'job-saved-with-errors'
Print errors	'job-completed-with-errors'	'job-completed-with-errors'	'job-completed-with-errors', 'job-saved-with-errors'

Print warnings and errors	'job-completed-with-errors'	'job-completed-with-errors'	'job-completed-with-errors', 'job-saved-with-errors'
---------------------------	-----------------------------	-----------------------------	--

997 **5.3.9.3 save-disposition (type2 keyword)**

998 This member attribute specifies whether or not the Job MUST be printed and/or saved. When
 999 a Job moves into the 'processing' state, the value of the member attribute "save-disposition"
 1000 is checked to determine what is to happen during the 'processing' state.

1001 The "save-disposition" member attribute specifies processing steps that either MUST occur
 1002 or that are prohibited. However, other processing steps MAY occur during the 'processing'
 1003 state, provided they are not prohibited by the value of the "save-disposition" member
 1004 attribute.

1005 When a Saved Job is reprinted using any of the operations that reprint a Retained Job (e.g.,
 1006 Reprocess-Job or Resubmit-Job), the Printer MUST NOT copy the "job-save-disposition"
 1007 attribute from the Saved Job to the copy of the Saved Job so that the Job is not re-saved
 1008 again. Note: the copy of the Saved Job will be saved again, if the Resubmit-Job operation
 1009 supplies its own "save-job-disposition" attribute.

1010 Standard keyword values are:

Keyword	Description
'none'	<p>The Printer MUST print the job. The Printer MUST NOT save any portion of the Job except for processing purposes. The Printer MUST NOT apply the "job-save-disposition-default" attribute.</p> <p>If the print was successful, the Printer MUST add the 'job-completed-successfully' value to the job's "job-state-reasons" attribute.</p> <p>If the printing had (1) warnings or (2) errors (possibly with warnings), the Printer MUST add the 'job-completed-with-warnings' or 'job-completed-with-errors' value, respectively, to the job's "job-state-reasons" attribute.</p>
'save-only'	<p>The following constraints apply to the 'processing' of the job:</p> <ul style="list-style-type: none"> • The Job MUST NOT be printed. • The Document Data MUST be saved to the location specified by the "save-location" member attribute. <p>The Printer's Job scheduling algorithm MAY depend on whether or not the Job is 'save-only'. However, the Printer MUST save the Job</p>

while the Job is in the 'processing' state (the job's "job-state" attribute is set to 'processing'). Thus, the Printer MUST move the Job (typically from the 'pending' state) to 'processing' state and add the 'job-saving' value (see description of new "job-state-reasons" later in section 11.3) to the job's "job-state-reasons" attribute.

When the Printer completes saving the job, the Printer MUST move the Job to the 'completed' state by setting the job's "job-state" attribute to the 'completed' value and removing the 'job-saving' value (see description of new "job-state-reasons" later in section 11.3) from the job's "job-state-reasons" attribute.

If the save was not successful, the Printer MUST add the 'job-saved-with-warnings' or 'job-saved-with-errors' value to the job's "job-state-reasons" attribute (see description of new "job-state-reasons" later in section 11.3). If the Printer encounters an error during saving, such that a reprint of that Job using the Reprocess-Job (see section 4.3.1.1) or Resubmit-Job (see section 4.3.1.2) operations will not produce complete results, the Printer MUST reject the Reprocess-Job or Resubmit-Job with the error client-error-not-possible.

'print-save'

The following constraints apply to the 'processing' of the job:

- The Job MUST be printed.
- The Document Data MUST be saved to the location specified by the "save-location" member attribute.

The order of the processing steps required for the 'print-save' disposition is implementation dependent. However, the Printer MUST save the Job during the same period that it prints the job, namely, while the Job is in the 'processing' state (the job's "job-state" attribute is set to 'processing'). Thus, the Printer MUST move the Job (typically from the 'pending' state) to 'processing' state and add the 'job-printing' and 'job-saving' value (see description of new "job-state-reasons" later in section 11.3) to the job's "job-state-reasons" attribute at the appropriate times.

When the Printer completes saving the job, then the Printer MUST move the Job to the 'completed' state by setting the job's "job-state" attribute to the 'completed' value and removing the 'job-printing' and 'job-saving' (see description of new "job-state-reasons" later in section 11.3) values from the job's "job-state-reasons" attribute.

If both the save and the print were successful, the Printer MUST add the 'job-completed-successfully' value to the job's "job-state-reasons" attribute.

If the printing had (1) warnings or (2) errors (possibly with warnings), the Printer MUST add the 'job-completed-with-warnings' or 'job-completed-with-errors' value, respectively.

As with the 'save-only' value, if the save was not successful, the Printer MUST add the 'job-saved-with-warnings' or 'job-saved-with-errors' value to the job's "job-state-reasons" attribute (see description of new "job-state-reasons" later in section 11.3).

1011 **5.3.9.4 save-info (1setOf collection)**

1012 This member attribute is a collection that contains the attributes that tell the Printer how to
 1013 save the job. This includes the format in which the Document Data MUST be saved, and the
 1014 location to which these are saved. Multiple save locations or document formats MAY be
 1015 saved by specifying multiple collections within this attribute.

1016 If the Client supplies the "job-save-disposition" Job Template attribute but omits the "save-
 1017 info" member attribute, the Printer supplies a single collection value for the "save-info"
 1018 member attribute from the values of its "save-location-default" attribute, the job's "job-name",
 1019 and its "save-document-format-default" attribute (see descriptions immediately below).

1020 A Client MUST supply in a request a number of collections not to exceed the maximum
 1021 number supported specified in the "max-save-info-supported" Printer Description attribute
 1022 (see "max-save-info-supported" description in section 10.6). As with any Job Template
 1023 attribute, if the Client does supply more values than the Printer supports and the values of
 1024 the "ipp-attribute-fidelity" is 'false' (or omitted), the Printer MUST accept the job, return the
 1025 'successful-ok-ignored-or-substituted-attributes' status code, return the ignored values in the
 1026 Ignored Attributes group, use the first n values, and ignore the remaining values. If the Client
 1027 does supply more values than the Printer supports and the values of the "ipp-attribute-
 1028 fidelity" is 'true', the Printer MUST reject the request and return the 'client-error-request-
 1029 entity-too-large' status code.

1030 The "save-info" collection member attributes are:

1031 **Table 7 - "save-info" member attributes**

Member Attribute Name	Request	Printer Support
save-location	MUST	MUST

save-name	MAY	MAY
save-document-format	MAY	MUST

1032 5.3.9.4.1 save-location (uri)

1033 This member attribute specifies the path to the directory as a URI where the Printer MUST
1034 save the Document Data and other information.

1035 The "save-location" and ("save-location-default" and "save-location-supported") attribute
1036 value MUST be an Absolute URI [RFC2396]. Absolute URIs are specified with a URI
1037 scheme, an optional authority component, and an absolute path (e.g.,
1038 'ftp://printhost.printco.com/var/spool/jobdir' or 'file:///job-repository/jobdir').

1039 Note: As any other member attribute of a Job Template attribute, the Printer
1040 validates the "save-location" member attribute as follows: If the Client supplies the
1041 "save-location" member attribute, the value MUST match one of the values of the
1042 Printer's "save-location-supported" (1setOf uri) attribute. If the value does not
1043 match, the Printer's action depends on the value of the job's "ipp-attribute-fidelity"
1044 (boolean) attribute: If "ipp-attribute-fidelity" is 'false' or omitted, the Printer MUST
1045 accept the job, return the 'successful-ok-ignored-or-substituted-attributes' status
1046 code, return the ignored attributes in the Unsupported Attributes Group, and
1047 perform one of the following actions DEPENDING ON IMPLEMENTATION:

- 1048 1. Ignore the attribute and not save the job;
- 1049 2. Put the Job in the 'held' state and let the operator fix the problem, either by
1050 changing the job's "save-location" attribute value or adding the value to the
1051 Printer's "save-location-supported" attribute; or
- 1052 3. Substitute the job's "save-location" value with one of the values of the
1053 Printer's "save-location-supported" values.

1054 If "ipp-attribute-fidelity" is 'true', the Printer MUST reject the request, return the
1055 'client-error-attributes-or-values-not-supported' status code, along with the "job-
1056 save-disposition" attribute in the Unsupported Attributes Group.

1057 If the Client wants to put the saved Job in a sub-directory (whether it exists or not) of one of
1058 the directories specified by the "save-location-supported" Printer attribute, the Client
1059 supplies that sub-directory name as part of the "save-name" attribute (see "save-name"
1060 description below), not as part of the "save-location" member attribute.

1061 Note: As with any other 'name', 'integer', 'uri', or 'collection' Job Template or Job
1062 Template member attribute, the administrator can suspend validation by configuring
1063 the Printer's "user-defined-values-supported" attribute with the 'save-location'
1064 keyword (see "user-defined-values-supported" description in [PWG5100.3]), so that
1065 the user can specify an arbitrary path and the Printer will accept the job. If the
1066 Printer cannot process the Job using the specified value for "save-location", then
1067 the Printer MUST hold the Job so that an operator can attempt to create the

1068 necessary sub-directories to populate the path, if they don't already exist, or change
 1069 the job's "save-location" attribute value. See Table 10 below entitled "Printer actions
 1070 for various Job and Printer attribute values", at the end of the "job-save-disposition"
 1071 description.

1072 If the Client supplies the "save-info" member attribute but omits the "save-location" member
 1073 attribute, the Printer supplies the "save-location" member attribute value from its "save-
 1074 location-default" attribute (see "save-location-default" description below).

1075 Table 8 lists the URI Schemes defined for use in the "save-location" member attribute.

1076 **Table 8 - URI Schemes for "save-location" member attribute**

URI Scheme	Description	Printer Support
ftp	Use IETF FTP protocol [RFC959], [RFC2228], [RFC2640]	MUST
file	Use the Printer's configured file system. Since the 'file:' URI scheme cannot be separated from the Printer object's native file system, the semantic of the 'file:' URI scheme is IMPLEMENTATION DEPENDENT. Also, the 'file:' URI scheme on some Printer objects MAY be limited to the local file system, while on other Printer objects it MAY be configured to use a network file system. The Printer implementation MAY allow the system administrator to configure where the 'file:' scheme is based in the file system. However, the base for the 'file:' scheme MUST be the same as for all other uses of the 'file:' scheme, such as the value of the "document-uri" operation attribute in a Printer-URI operation [STD92].	MAY
http	Use HTTP protocol with the Put operation to save the job.	MUST

1077 It is RECOMMENDED that for each URI scheme supported for saving jobs, that all of these
 1078 values have the first token in the file path be 'job-repository'. Then an administrator that has
 1079 to manage the saved jobs for several Printers will have a consistent naming schemes for
 1080 locating all the saved jobs by whatever means used to access the saved jobs. For example,
 1081 for the 'file:' scheme, all of the values SHOULD start out with: file:///job-repository/ and for
 1082 the 'ftp:' scheme, all of the values SHOULD start out with: ftp://xxx/job-repository/. (Note: in
 1083 URIs, the final "/" is redundant, and the Printer MUST behave the same whether or not the
 1084 final "/" is present).

1085 **5.3.9.4.2 save-name (name(MAX))**

1086 This member attribute specifies the name of the saved Job in the directory specified by the
 1087 "save-location" member attribute. The Client can supply a "save-name" attribute value that
 1088 is either a simple file name or a relative path where each component of the path is separated
 1089 by a FORWARD SLASH ("/") character. The "save-name-subdirectory-supported" Printer

1090 Description attribute indicates whether or not the Printer supports a FORWARD-SLASH (“/”)
1091 in the “save-name” value. Whether the FORWARD SLASH when supported is actually
1092 implemented as a sub-directory is IMPLEMENTATION DEPENDENT.

1093 There is no requirement that the "save-name" attribute value in combination with the "save-
1094 location" attribute value specify an identification that is unique. Thus, if the "save-name"
1095 attribute value in combination with the "save-location" attribute value specifies a handle that
1096 already exists, the Printer MUST accept the Job and save the Job with the duplicate “save-
1097 name” value. This requirement is because a Saved Job is referenced for re-printing using
1098 the “job-id” attribute value assigned by the Printer that is unique at least with respect to that
1099 Printer.

1100 If the “save-name” member attribute is not specified by the Client in the “job-save-
1101 disposition” Job Template attribute, the Printer object MUST generate a “save-name”
1102 attribute value for the Job using the job’s “job-name” attribute value.

1103 Note: Printers MUST generate a “job-name” value, when the Client does not supply
1104 a “job-name” operation attribute [STD92], to ensure there is always a “job-name”
1105 value.

1106 5.3.9.4.2.1 Why there is no “save-name-default” Printer attribute

1107 There is no “save-name-default”. If the Client omits the “save-name” member attribute when
1108 supplying the “save-info” member attribute, the Printer uses the job’s “job-name” attribute as
1109 the value of the “save-name” attribute (described above).

1110 5.3.9.4.3 save-document-format (mimeMediaType)

1111 This member attribute indicates the document format in which the Job content (Document
1112 Data) MUST be saved. If the "job-save-disposition" attribute is supported, the Printer object
1113 MUST support the "save-document-format" member attribute.

1114 If the Client supplies the “save-info” member attribute but omits the “save-document-format”
1115 member attribute, the Printer MUST use the value of its “save-document-format-default”
1116 attribute (see above "save-info" description).

1117 Although there can be a many-to-one relationship of documents to a job, all documents in a
1118 Job specified with a disposition of 'save' or 'print-save' MUST be saved in the same format
1119 as specified by the "save-document-format" attribute value. A Job MAY be saved to multiple
1120 formats by specifying multiple collection values for the "save-info" member attribute.

1121 The “job-save-disposition” member attribute (and the “save-document-format” member
1122 attribute) is NOT defined to be used with the “page-overrides” attribute (see [PWG5100.6]).
1123 Thus, all documents MUST be saved in the same document format in each saved job.

1124 The ‘mimeMediaType’ values defined for the “save-document-format” attribute are listed
1125 below. All values MUST include saving PDL data. A Printer MUST support at least one value.

1126 However, at this time, this specification does NOT REQUIRE a Printer to support any
 1127 particular formats for saving jobs.

1128 If the saved Job is submitted to a different make-and-model Printer that supports the same
 1129 document-format (i.e., the same value of the “document-format” operation attribute in the
 1130 Document Creation request), then the Printer MUST be able to print the job, but the output
 1131 cannot be guaranteed to appear exactly the same as the original output.

MIME Media Type	Description
Any PDL document format	<p>If any PDL document-format value is supplied from the Printer’s “document-format-supported” attribute, such as ‘application/postscript’, then the Printer MUST save the PDL data in that document format.</p> <p>Printer implementations are free to store the saved data in any form they want for convenient, fast, and/or compact re-printing using Reprocess-Job or Resubmit-Job, and NEED NOT be identified by a distinct mimeType value in the “save-document-format-supported” Printer attribute.</p> <p>The ‘application/octet-stream’ value MUST NOT be supplied for this attribute since it doesn’t make any sense for saving jobs.</p>

1132 The referenced specifications that define the saved format MUST meet the conformance
 1133 requirements listed in section 12.4.2.1.

1134 **5.3.9.4.4 Printer actions for various combinations of attributes**

1135 This section lists the Printer actions for various combinations of "save-location" (uri), "save-
 1136 name" (name(MAX)), "save-location-supported" (1setOf uri), existing saved jobs, ipp-
 1137 attribute-fidelity (boolean), "user-defined-values-supported" (1setOf keyword) and Printer
 1138 actions.

1139 The possible Printer actions are (see above descriptions of "save-location" and "save-name"
 1140 for details):

- 1141 1. reject: The Printer rejects the Job Creation request, returns the ‘client-error-attributes-
 1142 or-values-not-supported’ status code and the “job-save-disposition” attribute and
 1143 value in the Unsupported Attributes group.
- 1144 2. accept-save: The Printer accepts the Job Creation request, returns the ‘successful-
 1145 ok’ status code, and attempts to create all necessary files and sub-directories.
- 1146 3. accept-substitute: The Printer accepts the Job Creation request, returns the
 1147 ‘successful-ok-ignored-or-substituted-attributes’ status code and the “job-save-

1148 disposition” attribute and value in the Unsupported Attributes group, and,
 1149 DEPENDING ON IMPLEMENTATION: (1) ignores the attribute and does not perform
 1150 the save, (2) puts the Job in the ‘held’ state and let the operator fix the problem, either
 1151 by changing the job’s “save-location” attribute value or adding the value to the
 1152 Printer’s “save-location-supported” attribute, or (3) substitutes the job’s “save-
 1153 location” value with one of the values of the Printer’s “save-location-supported”
 1154 values.

1155 4. accept-hold: The Printer accepts the Job Creation request, returns the ‘successful-
 1156 ok’ status code, and holds the Job for the operator to resolve the conflict so that the
 1157 Job can be saved.

1158 Table 10 shows the Printer actions for the various possible value combinations of the other
 1159 Job and Printer attributes. In the example, there is already one saved job: ‘a/bar’. The Printer
 1160 supports three save-location directories: a, b, c.

1161 **Table 9 - Printer actions for various Job and Printer attribute values**

MIME Media Type	save-name	save-location-supported	existing saved jobs	ipp-attribute-fidelity	user-defined-values-supported	Printer action
a	foo	a,b,c	a/bar	T F	none	accept-save
a	d/foo	a,b,c	a/bar	T F	none	accept-save
a	bar	a,b,c	a/bar	T F	none	accept-hold
d	foo	a,b,c	a/bar	F	none	accept-substitute
d	foo	a,b,c	a/bar	T	none	reject
a	foo	a,b,c	a/bar	T F	save-location	accept-save
a	d/foo	a,b,c	a/bar	T F	save-location	accept-save
a	bar	a,b,c	a/bar	T F	save-location	accept-hold
d	foo	a,b,c	a/bar	F	save-location	accept-hold
d	foo	a,b,c	a/bar	T	save-location	accept-hold
a/d	foo	a,b,c	a/bar	F	save-location	accept-hold
a/d	foo	a,b,c	a/bar	T	save-location	accept-hold

1162 **5.3.9.4.5 Why there is no save-info-default Printer Description attribute**

1163 There is no “save-info-default” Printer attribute. If the Client supplies the “job-save-
 1164 disposition” Job Template attribute but omits the “save-info” member attribute, the Printer
 1165 creates a single collection value for the “save-info” member attribute using from the Printer’s
 1166 “save-location-default” and “save-document-format-default” Printer attributes and the job’s
 1167 “job-name” attribute (see "save-info" description above).

1168 **5.3.10 media-col (collection)**

1169 The following member attributes in Table 15 and their semantic descriptions have been
 1170 added to the existing IPP “media-col” Job Template attribute [PWG5100.3].

1171 **Table 10 - Additional "media-col" member attributes**

Member Attribute Name	Request	Printer Support
media-tooth	MAY	MAY
media-grain	MAY	MAY
media-thickness	MAY	MAY

1172 These additional "media-col" collection member attributes definitions are:

1173 **5.3.10.1 media-tooth (type2 keyword | name(MAX))**

1174 The "media-tooth" member attribute indicates the desired tooth (or roughness) of the media
 1175 being specified. The source for this attribute is [ISO10175].

1176 The tooth of a medium is particularly important for those marking engines that use pens (e.g.
 1177 plotters) to mark the medium. The type of pen used shall match the tooth of the medium for
 1178 best resolution.

1179 Standard keyword values for "media-tooth" are:

Keyword	Description
'antique'	Rougher than vellum surface [1]
'calendared'	Extra smooth or polished uncoated paper [1]
'coarse'	The specified media should have a coarse tooth or rough finish.
'fine'	The specified media should have a fine tooth or smooth finish.
'linen'	Texture of coarse woven cloth [1]
'medium'	The specified media should have a medium tooth or regular finish.

'smooth'	Smooth [1]
'stipple'	Fine pebble finish [1]
'uncalendared'	Rough, unpolished and uncoated papers [1]
'vellum'	Slightly rough surface [1]

1180 [1] - From [JDF1.4] Media/@Texture attribute

1181 The Administrator can define a custom media tooth using the 'name' (MAX) attribute syntax
 1182 of the "media-tooth-supported" (1setOf (type2 keyword | name(MAX))) Printer attribute.
 1183 Note: as with other Job Template and member attributes, the user can also supply user-
 1184 defined tooth names that are not among the values of the “media-tooth-supported” Printer
 1185 attribute, if the Administrator has configured the Printer's "user-defined-values-supported"
 1186 attribute (see [PWG5100.3]) to contain the 'media-tooth' attribute keyword value.

1187 **5.3.10.1 media-tooth-supported (1setOf (type2 keyword | name(MAX)))**

1188 The "media-tooth-supported" (1setOf (type2 keyword | name(MAX))) Printer attribute
 1189 identifies the values of this "media-tooth" member attribute that the Printer supports, i.e., the
 1190 media tooth supported.

1191 **5.3.10.2 media-grain (type2 keyword | name(MAX))**

1192 The "media-grain" member attribute indicates the desired grain of the media being specified.
 1193 The source for this attribute is [ISO10175].

1194 Grain affects the curl and the folding of the medium. Some marking engines are sensitive to
 1195 the resulting curl. Standard keyword values for "media-grain" are:

Keyword	Description
'x-direction'	The direction of the paper fibers is in the short dimension (i.e. the x-direction) of the medium.
'y-direction'	The direction of the paper fibers is in the long dimension (i.e. the y-direction) of the medium.

1196 See section 2.4 of [PWG5100.3] regarding the coordinate system.

1197 The Administrator can define a custom media grain using the 'name' (MAX) attribute syntax
 1198 of the "media-grain-supported" (1setOf (type2 keyword | name(MAX))) Printer attribute.
 1199 Note: as with other Job Template and member attributes, the user can also supply user-
 1200 defined grain names that are not among the values of the “media-grain-supported” Printer
 1201 attribute, if the Administrator has configured the Printer's "user-defined-values-supported"
 1202 attribute (see [PWG5100.3]) to contain the 'media-grain' attribute keyword value.

1203 **5.3.10.2.1 media-grain-supported (1setOf (type2 keyword | name(MAX)))**

1204 The "media-grain-supported" (1setOf (type2 keyword | name(MAX))) Printer attribute
1205 identifies the values of this "media-grain" member attribute that the Printer supports, i.e., the
1206 media grain supported.

1207 The Administrator can define custom media types using the 'name' (MAX) attribute syntax
1208 of the "media-supported" (1setOf (type2 keyword | name(MAX))) Printer attribute. Note: as
1209 with other Job Template and member attributes, the user can also supply user-defined
1210 material names that are not among the values of the "media-supported" Printer attribute, if
1211 the Administrator has configured the Printer's "user-defined-values-supported" attribute (see
1212 [PWG5100.3]) to contain the 'media' attribute keyword value.

1213 **5.3.10.3 media-thickness (integer(1:MAX))**

1214 The "media-thickness" member attribute indicates the thickness of the media being
1215 specified. The source for this attribute is JDF v1.0.

1216 The unit of measure for the "media-thickness" member attribute is one hundredth of a
1217 millimeter. This unit is equivalent to 1/2540th of an inch resolution.

1218 **5.3.10.3.1 media-thickness-supported (rangeOfInteger(1:MAX))**

1219 The "media-thickness-supported" (rangeOfInteger(1:MAX)) Printer attribute identifies the
1220 values of this "media-thickness" member attribute that the Printer supports.

1221

1222

1223 **5.3.11 pdl-init-file (1setOf collection)**

1224 This attribute controls initialization of the Printer's Page Description Language (PDL)
1225 interpreter. This attribute specifies the files that the Printer uses to initialize the PDL
1226 interpreter before it starts interpreting each Input Document (i.e. file) in a Job with one
1227 exception. When the value of "multiple-document-handling" is 'single-document' or 'single-
1228 document-new-sheet', a PDL interpreter processes all of the Input-Documents of a Job as if
1229 the Input Documents were a single file. In this case, the PDL interpreter is initialized just
1230 before processing the first Input Document only.

1231 Some PDLs (i.e. PostScript and HP PCL) have the ability to define reusable macros, code
1232 fragments, fonts, and other resources. These components may reside either within the body
1233 of the document file to be printed or within files that can be sent to the Printer's PDL
1234 interpreter separately. Having the ability to send these "pre-initialization" (prep) files
1235 separately from the main body of the Job to be printed, enables an application to "pre-
1236 condition" the PDL interpreter with these definitions ahead of time. This in turn makes it
1237 possible to reduce the size of a given document data file to be printed and to reuse the
1238 components on other jobs.

1239 The exact mechanism by which an initialization file (or list of initialization files) is installed on
 1240 the Printer is implementation dependent and outside of the current scope of IPP.

1241 Upon receipt of the "pdl-init-file" collection attribute(s) the Printer will send the initialization
 1242 file (or list of files) referenced to the Printer's PDL interpreter for processing BEFORE starting
 1243 to process the document(s) attached to the Job (in the Print-Job request) or referenced by
 1244 the Job (in the Print-URI request).

1245 If the Printer receives more than one "pdl-init-file" collection in a given print request, then the
 1246 list of initialization files will be sent to the Printer's PDL interpreter in the order that they are
 1247 encountered in the Job Template attributes.

1248 Table 11 lists the member attributes of the "pdl-init-file" Job Template attribute and specifies
 1249 whether Clients MUST supply them in collection values and whether Printers MUST support
 1250 them if supporting this collection attribute. The following sub-sections define these member
 1251 attributes.

1252 **Table 11 - "pdl-init-file" member attributes**

Member Attribute Name	Request	Printer Support
pdl-init-file-location	MAY	MUST
pdl-init-file-name	MUST	MUST
pdl-init-file-entry	MAY	MAY

1253 **5.3.11.1 pdl-init-file-location (uri)**

1254 This member attribute must be an Absolute URI [RFC 2396] that specifies the path to the
 1255 directory where the initialization file to be sent to the Printer's PDL interpreter will be found.
 1256 According to RFC 2396, an Absolute URI MUST have a URI scheme, MAY have an authority
 1257 (host name) component, and MUST have an absolute path (e.g.,
 1258 'ftp://printhost.printco.com/var/spool/jobinitfiledir/initfile1' or 'file:///jobinitfiledir/initfile1').

1259 **5.3.11.2 pdl-init-file-name (name(MAX))**

1260 This member attribute specifies the name of the initialization file within the directory specified
 1261 by the "pdl-init-file-location" member attribute that the Printer MUST send to its PDL
 1262 interpreter prior to processing the document.

1263 The "pdl-init-file-subdirectory-supported" Printer Description attribute indicates whether or
 1264 not the Printer supports a FORWARD-SLASH ("/") in the "pdl-init-file-name" value. Whether
 1265 the FORWARD SLASH when supported is actually implemented as a sub-directory is
 1266 IMPLEMENTATION DEPENDENT.

1267 A well-formed request MUST include at least the name of the initialization file to be used
 1268 (i.e. the "pdl-init-file-location" or directory containing the initialization file need not be supplied

1269 by the Client and in fact, might not be known to the client). The Client can supply a "pdl-init-
 1270 file-name" attribute value that is either a simple file name or a relative path where each
 1271 component of the path is separated by a FORWARD SLASH ("/") character. The "pdl-init-
 1272 file-name" member attribute value concatenated with the "pdl-init-file-location" attribute value
 1273 (supplying a "/" between them, if necessary) specifies the initialization file to be used. For
 1274 example, if "pdl-init-file-location" is 'a/b' or 'a/b/' and "pdl-init-file-name" is 'c/d', the resulting
 1275 file path is: 'a/b/c/d'.

1276 **5.3.11.3 pdl-init-file-entry (name(MAX))**

1277 This member attribute is an optional member of the collection that, if present, specifies an
 1278 entry point within the init file that the PDL interpreter starts at.

1279 **5.3.12 proof-print (collection) REQUIRED Job Template attribute**

1280 This attribute allows a user to specify the attributes of the proof print(s) of the Job that are
 1281 to be printed prior to the printing the full run of the job. After the proof prints have been
 1282 produced, the Printer MUST retain the completed Job as a Proof Print Job for a period of
 1283 time sufficient to allow users to proof the job, rather than aging it out after an implementation-
 1284 defined period which SHOULD be longer than the period for ordinary completed jobs
 1285 [STD92]. When a Proof Print Job is reprinted using any of the operations that reprint a
 1286 Retained Job (e.g., Reprocess-Job or Resubmit-Job), the Printer MUST NOT copy the
 1287 "proof-print" attribute from the Proof Print Job to the copy of the Proof Print Job so that the
 1288 Job is not re-proofed again. Only if the Resubmit-Job operation supplies its own "proof-print"
 1289 attribute, will the copied Job be proofed. .

1290 A Client MUST be able to supply and a Printer MUST support this attribute in order to claim
 1291 support of this IPP Job and Printer Extensions – Set 2 v2.0 Specification, respectively. See
 1292 section 12.5 Conformance Requirements for the REQUIRED "proof-print" Job Template
 1293 attribute for additional conformance requirements for clients and Printer.

1294 Table 12 lists the member attributes of the "job-sheets-col" collection attribute:

1295 **Table 12 - "proof-print" member attributes**

Member Attribute Name	Request	Printer Support
proof-print-copies	MUST	MUST
media	MUST be one or the other, but NOT both	MUST
media-col		MAY

1296 **5.3.13 proof-print-copies (integer (0:MAX))**

1297 This member attribute specifies the number of copies the Printer MUST produce in the proof
1298 job. The proof print(s) are produced using the Job Template attributes specified with the Job,
1299 except any overridden by member attributes in this collection.

1300 If the "proof-print-copies" value is 0, then no proof prints are produced.

1301 After the requested number of proof prints have been successfully produced by the Printer,
1302 then the Printer transitions the Job to the 'completed' state and retains the Job for a period
1303 of time that is long enough for the users to proof the output of the Proof Print Job, rather
1304 than aging the Job out.

1305 **5.3.14 media (type2 keyword | name(MAX)) or media-col (collection)**

1306 Either the "media" [STD92] or the "media-col" [PWG5100.3] member attribute is used to
1307 indicate the media that the Printer MUST use for the specified "proof-print-copies" of the
1308 Proof Job. The member attributes are the same as those for the "media-col" attribute defined
1309 in [PWG5100.3] and in section 11.5 of this specification.

1310 The Client MUST supply either the "media" or the "media-col" member attribute, but NOT
1311 both. If the Client supplies such a malformed request by supplying neither or both, the Printer
1312 MUST (depending on implementation) either (1) reject the request and return the 'client-
1313 error-bad-request' status code [STD92] or (2) use either the "media" or the "media-col"
1314 member attribute, independent of the value of the "ipp-attribute-fidelity" attribute supplied by
1315 the client.

1316 Since this "media" member attribute has the same name as the "media" Job Template
1317 attribute [STD92], the "media-supported" (1setOf (type2 keyword | name(MAX))) Printer
1318 attribute identifies the values of this "media" member attribute (as well as the values of the
1319 "media" Job Template attribute) that the Printer supports, i.e., the names of the supported
1320 media. A value that is provided for the "media" member attribute in the collection would have
1321 the same effect as if the Job were submitted with that value as the value of the "media" Job
1322 Template attribute.

1323 Since this "media-col" member attribute has the same name as the "media-col" Job
1324 Template attribute [PWG5100.3], the "media-col-supported" Printer attribute identifies the
1325 keyword names of the member attributes supported in this "media-col" member attribute (as
1326 well as the keyword names of the "media-col" Job Template attribute), i.e., the names of the
1327 member attributes that the Printer supports.

1328 **5.4 Printer Description Attributes**

1329 **5.4.1 feed-orientation-default (type2 keyword)**

1330 This attribute specifies the default value of "feed-orientation" when not supplied in a request.
1331 This default depends upon the media-size being requested and is Printer implementation
1332 dependent upon how the default value is calculated.

1333 **5.4.2 feed-orientation-supported (1setOf (type2 keyword))**

1334 This attribute specifies which values of "feed-orientation" that the Printer supports.

1335 **5.4.3 font-name-requested-default (name(MAX))**

1336 This attribute specifies the default value of "font-name-requested" when not supplied in a
1337 request.

1338 **5.4.4 font-name-requested-supported (1setOf name(MAX))**

1339 This attribute specifies which values the Printer supports for the "font-name-requested" Job
1340 Template attribute.

1341 **5.4.5 font-size-requested-default (integer (1:MAX))**

1342 This attribute specifies the default value of "font-size-requested" when not supplied in a
1343 request.

1344 **5.4.6 font-size-requested-supported (1setOf rangeOfInteger (1:MAX))**

1345 This attribute specifies which values or ranges of values the Printer supports for the "font-
1346 size-requested" Job Template attribute.

1347 **5.4.7 job-creation-attributes-supported (1setOf type2 keyword)**

1348 This attribute enables a Client to query the Printer for the set of Job attributes that can be
1349 set by the Client during a Create-Job, Print-Job, Validate-Job, or Print-URI operation.

1350 This attribute allows the Client to dynamically determine all the Job attributes that it can
1351 specify at the time of Job creation.

1352 The list of attribute names in "job-creation-attributes-supported" MUST include:

- 1353
- All Job Template attributes that may be supplied by the Client at the Job level
 - All operation attributes that are written to the Job object as Job Description attributes (e.g., "job-name") at the Job level
- 1354
1355

1356 The list of attribute names in "job-creation-attributes-supported" MUST NOT include:

1357 • Collection member attribute names
1358 Note: The Client can determine which member attributes of “xxx” collection
1359 attributes are supported by querying the “xxx-supported” Printer attribute (see
1360 [RFC3382]).

1361 • Operation attributes that are not Job attributes
1362 Note: The only mechanism previously available for a Client to query the Printer for
1363 supported attributes is to specify the ‘job-template’ group value on a Get-Printer-
1364 Attributes operation. This has been problematic because: 1) it returns the entire list
1365 of “xxx-default” and “xxx-supported” attributes and values which will be excessively
1366 burdensome for production printing systems with extensive functionality, and 2) it
1367 does not include operation attributes that are written to the Job object as Job
1368 description attributes (i.e., “job-name”).

1369 Note: See also the description of the Get-Printer-Attributes operation [STD92] and
1370 the distinction between “xxx-default”, “xxx-ready”, and “xxx-supported” attributes
1371 when “xxx” is any Job Template attribute that a Client can supply as a top-level
1372 attribute vs. (see [RFC3382]) when “xxx” is a member attribute for a Job Template
1373 ‘collection’ attribute (e.g. The “media-color-supported” Printer attribute lists the
1374 values of the “media-color” member attribute of the “media-col” collection attribute,
1375 but does not belong to the ‘job-template’ attribute group, or to the ‘printer-
1376 description’ attribute group).

1377 **5.4.8 job-ids-supported (boolean)**

1378 This attribute indicates whether the Printer supports the “job-ids” Operation in the following
1379 existing operations: Purge-Jobs (if supported) and Get-Jobs. A Printer MUST support the
1380 “job-ids-supported ” Printer Description attribute in order to claim support of this Job and
1381 Printer Extensions - Set 2 Specification.

1382 **5.4.9 job-delay-output-until-default (type2 keyword | name(MAX))**

1383 This attribute specifies the default value supplied by the Printer if the Client omits the ‘job-
1384 delay-output-until” Job Template attribute.

1385 **5.4.10 job-delay-output-until-supported (1setOf type2 keyword | name(MAX))**

1386 This attribute specifies the values supported by the Printer for the “job-delay-output-until”
1387 Job Template attribute. See the values defined for the “job-hold-until” Job Template attribute
1388 [STD92].

1389 **5.4.11 job-delay-output-until-time-supported (rangeOfInteger(0:MAX))**

1390 This attribute specifies the span of relative amount of time in seconds into the future that the
1391 Printer supports keeping the output from being produced. The Printer MUST use the time
1392 range to validate a Job that is submitted with a “job-delay-output-until-time” attribute.

1393 **5.4.12 job-hold-until-time-supported (rangeOfInteger(0:MAX))**

1394 This attribute specifies the span of relative amount of time in seconds into the future that the
 1395 Printer supports keeping the submitted Job in the 'pending-held' state. The Printer MUST
 1396 use the time range to validate a Job that is submitted with a "job-hold-until-time" attribute.

1397 **5.4.13 job-password-supported (integer(0:255))**

1398 The "job-password-supported" Printer Description attribute indicates the maximum length
 1399 that the Printer will accept for the unencrypted password which the Client will encrypt as the
 1400 value of the "job-password" Operation Attribute. A conforming Printer MUST be able to
 1401 accept 255 octets without truncation. However, a Printer MAY be implemented as a gateway
 1402 to another print system that cannot accept the full 255-octet range, in which case the Client
 1403 MUST NOT allow an unencrypted password greater than the length specified by this
 1404 attribute.

1405 **5.4.14 job-password-encryption-supported (1setOf (type2 keyword | name(MAX)))**

1406 This attribute specifies which encryption methods the Printer supports for Secure Print.
 1407 If the "job-password" operation attribute is supported, then this attribute MUST be supported.
 1408 Standard keyword values are:

Keyword	Description
'none'	The "job-password" attribute value is passed in the clear. No encryption has been applied. This value might also be used when the entire Operation is sent over a secure connection.
'md2'	The encryption method uses the MD2 hash algorithm defined in RFC 1319. [1]
'md4'	The encryption method uses the MD4 hash algorithm defined in RFC 1320. [1]
'md5'	The encryption method uses the MD5 hash algorithm defined in RFC 1321. [1]
'sha'	The encryption method uses the Secure Hash Algorithm 1 defined by the National Institute of Standards and Technology. [1]
'sha2-224'	The encryption method uses the Secure Hash Algorithm 2 defined by the National Institute of Standards and Technology, with an output size of 224 bits.
'sha2-256'	The encryption method uses the Secure Hash Algorithm 2 defined by the National Institute of Standards and Technology, with an output size of 256 bits.

'sha2-384'	The encryption method uses the Secure Hash Algorithm 2 defined by the National Institute of Standards and Technology, with an output size of 384 bits.
'sha2-512'	The encryption method uses the Secure Hash Algorithm 2 defined by the National Institute of Standards and Technology, with an output size of 512 bits.
'sha2-512_224'	The encryption method uses the Secure Hash Algorithm 2 defined by the National Institute of Standards and Technology, with an output size of 512 bits, truncated to 224 bits.
'sha2-512_256'	The encryption method uses the Secure Hash Algorithm 2 defined by the National Institute of Standards and Technology, with an output size of 512 bits, truncated to 256 bits.
'sha3-224'	The encryption method uses the Secure Hash Algorithm 3 defined by the National Institute of Standards and Technology, with an output size of 224 bits.
'sha3-256'	The encryption method uses the Secure Hash Algorithm 3 defined by the National Institute of Standards and Technology, with an output size of 256 bits.
'sha3-384'	The encryption method uses the Secure Hash Algorithm 3 defined by the National Institute of Standards and Technology, with an output size of 384 bits.
'sha3-512'	The encryption method uses the Secure Hash Algorithm 3 defined by the National Institute of Standards and Technology, with an output size of 512 bits.
'sha3-512_224'	The encryption method uses the Secure Hash Algorithm 3 defined by the National Institute of Standards and Technology, with an output size of 512 bits, truncated to 224 bits.
'sha3-512_256'	The encryption method uses the Secure Hash Algorithm 3 defined by the National Institute of Standards and Technology, with an output size of 512 bits, truncated to 256 bits.
'shake-128'	The encryption method uses the SHAKE128 method defined by the National Institute of Standards and Technology, with an output size of 128 bits.
'shake-256'	The encryption method uses the SHAKE256 method defined by the National Institute of Standards and Technology, with an output size of 256 bits.

1409 [1] - Deprecated

1410 **5.4.15 job-phone-number-default (uri)**

1411 This attribute specifies the Printer's default value for "job-phone-number" that the Printer will
1412 apply to a Job if the Client omits the "job-phone-number" Job Template attribute.

1413 **5.4.16 job-phone-number-supported (boolean)**

1414 This attribute, when supported and its value is 'true', indicates that the Printer accepts the
1415 "job-phone-number" attribute.

1416 **5.4.17 job-recipient-name-default (name(MAX))**

1417 This attribute specifies the Printer's default value for "job-recipient-name" that the Printer will
1418 apply to a Job if the Client omits the "job-recipient-name" Job Template attribute.

1419 **5.4.18 job-recipient-name-supported (boolean)**

1420 A true value indicates that the Printer accepts the "job-recipient-name" attribute.

1421 **5.4.19 job-save-disposition-default (collection)**

1422 The "job-save-disposition-default (collection)" attribute specifies the "job-save-disposition"
1423 member attributes and values that the Printer will provide, if any, if the Client omits the "job-
1424 save-disposition" collection attribute. A Printer MUST support the same member attributes
1425 for these default attributes as it supports for the corresponding Job Template attributes (see
1426 Table 7).

1427 The "save-info" (1setOf collection) member attribute of the "job-save-disposition-default"
1428 Printer attribute specifies the save information member attributes and values that the Printer
1429 will provide, if any, if the Client omits the "job-save-disposition" Job Template attribute
1430 entirely. A Printer MUST support the same member attributes for these default attributes as
1431 it supports for the corresponding Job Template attributes (see Table 7 and Table 8), with the
1432 single exception, that the "save-name" member attribute MUST NOT be supported (since
1433 the Printer MUST use the "job-name" attribute to generate the default "save-name").

1434 If the Client supplies the "job-save-disposition" Job Template attribute, but omits the "save-
1435 info" member attribute, the Printer uses its "save-location-default" and "save-disposition-
1436 default" Printer attributes and the job's "job-name" attribute to create the job's "save-info"
1437 member attribute, rather than using the "save-info" member attribute of the Printer's "job-
1438 save-disposition-default" attribute (see "save-info" description above).

1439 **5.4.20 job-save-disposition-supported (1setOf type2 keyword)**

1440 The "job-save-disposition-supported (1setOf type2 keyword)" attribute identifies the names
1441 of the member attributes supported in the "job-save-disposition" collection attribute, i.e., the
1442 names of the member attributes in Table 7 that the Printer supports. The RECOMMENDED

1443 way for a Client to determine whether or not a Printer support saving jobs, is to query this
 1444 Printer attribute.

1445 **5.4.21 job-spooling-supported (type2 keyword)**

1446 This attribute indicates whether or not jobs are spooled before the document data is
 1447 interpreted (RIPped). In other words, this attribute indicates when jobs are processed by the
 1448 Printer with respect to when the Printer receives and returns responses to Job Creation
 1449 requests (i.e., Print-Job, Print-URI), receives and returns responses to Document Creation
 1450 requests (i.e., Send-Document and Send-Uri requests) and "receives" or "fetches" such
 1451 document data.

1452 The value of this attribute returned in a Get-Printer-Attributes response MAY depend on the
 1453 "document-format" attribute supplied in the Get-Printer-Attributes request [STD92]. If the
 1454 Printer does not support this attribute, then the spooling behavior is implementation
 1455 dependent.

1456 The Get-Printer-Supported-Values operation [RFC3380] returns a '1setOf type2 keyword' so
 1457 that all possible values that the implementation is capable of supporting are indicated.

1458 The standard keyword values are:

Keyword	Description
'spool'	The Printer starts processing a Job until the Printer has (1) accepted and responded to the Job Creation request and all Document Creation requests (for a multi-document job) and (2) has "received" or "fetched" all document data for the job, i.e., spool rather than stream.
'stream'	The Printer starts processing a Job (1) before the Printer has accepted all Document Creation requests and (2) before the Printer has "received" or "fetched" all document data, i.e., stream rather than spool.
'automatic'	The Printer chooses whether to process a Job before or after the Printer has accepted all Document Creation requests and has "received" or "fetched" all document data, i.e., the Printer MAY spool and/or stream depending on policy and other factors, such as the document format, including a combination of spooling and streaming.

1459 **5.4.22 max-save-info-supported (integer(1:MAX))**

1460 The "max-save-info-supported" Printer Description attribute specifies the maximum number
 1461 of "save-info" member attribute collections that a Printer can accept in a Job request. If the
 1462 number of "save-info" member attribute collections supplied by a Client in a Job Creation

1463 operation exceeds the value of this attribute, the Printer MUST accept or reject the request
1464 as described in the "save-info" description in the "job-save-disposition" description (see
1465 description in section 7.9). If the Printer only supports one "save-info" collection, then the
1466 Printer MAY either (1) support this attribute with a value of '1' or (2) omit support of this
1467 attribute. The RECOMMENDED way for a Client to determine whether or not a Printer
1468 supports saving jobs, is to query the "job-save-disposition-supported" Printer attribute (see
1469 description in section 7.9.3).

1470 **5.4.23 media-col-database (1setOf collection)**

1471 The OPTIONAL "media-col-database" Printer Description attribute enables a Client to query
1472 the set of pre-defined media collections available in the printer's media database, if the
1473 "media-col" attribute is supported. This attribute is identical in format and syntax to "media-
1474 col-ready" but returns the entire set of pre-defined media collections known by the Printer
1475 instead of just the media collections currently in the Printer trays. If this attribute is supported,
1476 the members of the collections correspond to the supported members of the "media-col"
1477 attribute.

1478 The Printer MUST NOT return this attribute in the response to the Get-Printer-Attributes
1479 operation when the Client requested the 'all' or 'printer-description' group names. Therefore,
1480 the Client must request this attribute explicitly in order to get the media collections. The
1481 reason for this recommendation is that the amount of data returned in the response would
1482 be very large when combined with all of the other attributes.

1483 **5.4.24 pdl-init-file-location-supported (1setOf uri)**

1484 The "pdl-init-file-location-supported (1setOf uri)" Printer attribute specifies the path(s) to the
1485 directory (directories) of the supported initialization file(s) that the Client MAY ask the Printer
1486 to send to its PDL interpreter prior to processing the document.

1487 **5.4.25 pdl-init-file-name-supported (1setOf name(MAX))**

1488 The "pdl-init-file-name-supported (1setOf name(MAX))" Printer attribute specifies the
1489 name(s) of the supported initialization file(s) that the Client MAY ask the Printer to send to
1490 its PDL interpreter prior to processing the document.

1491 **5.4.26 pdl-init-file-name-subdirectory-supported (boolean)**

1492 The "pdl-init-file-name-subdirectory-supported" (boolean) Printer Description attribute
1493 indicates whether or not the Printer will accept a FORWARD SLASH ("/") character in the
1494 value of the "pdl-init-file-name" member attribute. If the value is 'false' and the Client supplies
1495 a FORWARD-SLASH ("/") in the "save-name" value, the Printer MUST reject the request
1496 and return the 'client-error-attributes-or-values-not-supported'.

1497 **5.4.27 pdl-init-file-default (1setOfcollection)**

1498 The "pdl-init-file-default" Printer Description attribute collection specifies the default
1499 initialization file (or list of files) and related information that the Printer will use if the Client
1500 omits the "pdl-init-file" Job Template attribute in a Job Creation operation. The member
1501 attributes are defined in Table 11. A Printer MUST support the same member attributes and
1502 values for this default collection attribute as it supports for the corresponding "pdl-init-file"
1503 Job Template attribute.

1504 A "pdl-init-file-name" within "pdl-init-file-default" collection with a "0 length value" will be used
1505 to indicate that Printer has no default initialization file (see description of "none" values in
1506 Section 2.7 in [PWG5100.3]).

1507 **5.4.28 pdl-init-file-supported (1setOf type2 keyword)**

1508 The "pdl-init-file-supported" Printer Description attribute identifies the keyword names of the
1509 member attributes supported in the "pdl-init-file" collection Job Template attribute, i.e., the
1510 keyword names of the member attributes in Table 11 that the Printer supports.

1511 **5.4.29 pdl-init-file-entry-supported (1setOf name(MAX))**

1512 The "pdl-init-file-entry-supported (1setOf name(MAX))" Printer attribute specifies the
1513 name(s) of the supported initialization file(s) that the Client MAY ask the Printer to send to
1514 its PDL interpreter prior to processing the document.

1515 **5.4.30 printer-detailed-status-messages (1setOf text(MAX))**

1516 The OPTIONAL "printer-detailed-status-messages" Printer Description attribute specifies
1517 additional detailed and technical information about the printer, in the same way "job-detailed-
1518 status-messages" provides additional information about a job. Printer-specific information
1519 such as fault and warning messages can be captured, and the 1setOf syntax supports
1520 multiple messages. The Printer NEED NOT localize the message(s), since they are intended
1521 for use by the system administrator or other experienced technical persons. Clients MUST
1522 NOT attempt to parse the value(s) of this attribute.

1523 **5.4.31 proof-print-default (collection)**

1524 The "proof-print-default" (collection) Printer Description attribute specifies the default value
1525 of "proof-print" MUST use when not supplied in a request. A Printer MUST support the same
1526 member attributes for this default collection as it supports for the corresponding "proof-print"
1527 Job Template attribute.

1528 **5.4.32 proof-print-supported (1setOf type2 keyword)**

1529 The "proof-print-supported" (1setOf (type2 keyword)) Printer Description attribute specifies
1530 which member attributes of "proof-print" that the Printer supports.

1531 **5.4.33 save-disposition-supported (1setOf type2 keyword)**

1532 The “save-disposition-supported (1setOf type2 keyword)” Printer attribute defines the save
1533 dispositions supported by the Printer for the “save-disposition” member attribute (see
1534 standard keyword values in above table).

1535 **5.4.34 save-info-supported (1setOf type2 keyword)**

1536 The "save-info-supported (1setOf type2 keyword)" attribute identifies the names of the
1537 member attributes supported in the "save-info" collection attribute, i.e., the names of the
1538 member attributes in Table 8 that the Printer supports.

1539 **5.4.35 save-location-default (uri)**

1540 The “save-location-default (uri)” Printer attribute indicates the value that the Printer supplies,
1541 if the Client omits the “save-location” member attribute from the “save-info” member
1542 attribute.

1543 **5.4.36 save-location-supported (1setOf uri)**

1544 The “save-location-supported (1setOf uri)” Printer attribute defines a list of URI values
1545 supported by the Printer object for the "save-location" member attribute (see above
1546 description). The Client MUST supply a value of the "save-location" member attribute that
1547 completely matches one of these values. Note: The administrator can configure the “save-
1548 location-supported” to have separate directories for individuals, groups, projects, or MAY
1549 just have one directory for all saved jobs. Whether or not access control is applied to these
1550 directories is IMPLEMENTATION DEPENDENT.

1551 **5.4.37 save-name-supported (boolean)**

1552 The “save-name-supported (boolean)” attribute indicates support for the OPTIONAL "save-
1553 name" member attribute of the "save-info" member attribute. Note: The means to query the
1554 Printer to see what saved jobs it has is a potential future extension.

1555 **5.4.38 save-name-subdirectory-supported (boolean)**

1556 The “save-name-subdirectory-supported” (boolean) Printer Description attribute indicates
1557 whether the Printer supports a FORWARD SLASH (“/”) character in the “save-name”
1558 (name(MAX)) member attribute. If the value is ‘false’ and the Client supplies a FORWARD-
1559 SLASH (“/”) in the “save-name” value, the Printer MUST reject the request and return the
1560 ‘client-error-attributes-or-values-not-supported’.

1561 **5.4.39 save-document-format-default (mimeMediaType)**

1562 If the Client supplies the “save-info” member attribute but omits the “save-document-format”
1563 member attribute (see above description), the Printer MUST use the value of its “save-
1564 document-format-default” (mimeMediaType) attribute.

1565 **5.4.40 save-document-format-supported (1setOf mimeType)**

1566 The "save-document-format-supported" (1setOf mimeType) attribute specifies the
1567 document formats which a Printer supports for saving jobs.

1568 If a Printer supports this Job Save & Reprint Feature, the Printer SHOULD be able to Reprint
1569 using the Resubmit-Job operation (see Section 4.3.1.2) for all the formats in which it is
1570 capable of saving jobs, i.e., the mimeType values of the Printer's "document-format-
1571 supported" Printer Description attribute SHOULD be a superset of the values of the Printer's
1572 "save-document-format-supported" attribute. For example, if a Printer supports the
1573 'application/X-single-page-tiff' format for saving jobs, it SHOULD also accept and support a
1574 Resubmit-Job operation to reprint that job.

1575 **5.4.41 which-jobs-supported (1setOf type2 keyword)**

1576 The "which-jobs-supported" Printer Description attribute enables a Client to query the Printer
1577 for the set of values that can be supplied one at a time as a value of the "which-jobs"
1578 operation attribute of the Get-Jobs operation. Current allowed values for "which-jobs" are
1579 'completed' and 'not-completed', and the "which-jobs" extensions described above extend
1580 the values to include keywords corresponding to the symbolic names of all IPP "job-state"
1581 enum values and to include Proof Print Jobs and Saved Jobs. The Printer MUST support
1582 the "which-jobs-supported" Printer Description attribute if it supports the "proof-print" and/or
1583 "job-save-disposition" Job Template attributes. See section 11.2 for the values).

1584 If this attribute is supported, then the Printer MUST support both 'completed' and 'not-
1585 completed' as valid values.

1586 **6. New Operations**

1587 This section defines the following IPP REQUIRED operations:

- 1588 1. Cancel-Jobs - allows the operator or administrator for the Printer to cancel selected
1589 or all Not Completed Jobs.
- 1590 2. Cancel-My-Jobs - allows a user to cancel selected or all his/her Not Completed Jobs.
- 1591 3. Close-Job - allows a Client to close a multi-document Job without supplying any
1592 additional documents.
- 1593 4. Resubmit-Job - allows a user to request the Printer to process a copy of a Retained
1594 Job with optional additional or modified attributes.
- 1595 5. Reprocess-Job - allows a user to re-process an exact copy of a Retained Job. This
1596 operation is defined in [RFC3998]

1597 **6.1 Cancel-Jobs Operation**

1598 The REQUIRED Cancel-Jobs operation allows the Operator or Administrator for the Printer
 1599 to cancel a list of Not Completed Jobs or all Not Completed Jobs on the Printer. This
 1600 operation works like the Cancel-Job operation [STD92], except that it works on a number of
 1601 Jobs at once. If the Printer cannot cancel all of the requested Jobs successfully, it MUST
 1602 NOT cancel any and MUST return an error code along with the list of offending Jobs' "job-
 1603 id" values. A Client MUST be able to supply and a Printer MUST support this operation in
 1604 order to claim support of this IPP Job and Printer Extensions – Set 2 v2.0 Specification,
 1605 respectively.

1606 This operation allows a Client to cancel one or more Print Jobs from the time the Job is
 1607 created up to the time it is completed, canceled, or aborted. Since a specified Job might
 1608 already be printing by the time a Cancel-Jobs operation is received, some media sheet
 1609 pages might be printed before the Job is actually terminated.

1610 The Client specifies the set of candidate jobs to be canceled by supplying and/or omitting
 1611 the "job-ids" (1setOf integer(1:MAX)) (see section 5.1.1 below), First, the Printer MUST
 1612 check the access rights of the requesting user to endure that it is the Operator or
 1613 Administrator of the Printer (see *Access Rights* below). If this check succeeds, then (and
 1614 only then) the Printer MUST accept or reject the request based on the current state of each
 1615 of the candidate jobs and transition each Job to the indicated new state as shown in Table
 1616 3 (copied verbatim from [RFC2911], including the Rule 1 and 2 for the convenience of the
 1617 reader). If any of the candidate jobs cannot be canceled, the Printer MUST NOT cancel any
 1618 jobs and MUST return the indicated error status code along with the list of offending "job-id"
 1619 values in the "job-ids" operation attribute (see section 5.1.2).

1620 **Table 13 - Legal Job state transitions for Cancel-Jobs and Cancel-My-Jobs Operations**

Current "job-state"	New "job-state"	IPP object's response status code and action
'pending'	'cancelled'	'successful-ok'
'pending-held'	'cancelled'	'successful-ok'
'processing'	'cancelled'	'successful-ok'
'processing'	'processing'	'successful-ok' See Rule 1
'processing-stopped'	'cancelled'	'successful-ok'
'processing-stopped'	'processing-stopped'	'successful-ok' See Rule 1
'completed'	'completed'	'successful-ok-ignored-or-substituted-attributes'
'cancelled'	'cancelled'	'successful-ok-ignored-or-substituted-attributes'
'aborted'	'aborted'	'successful-ok-ignored-or-substituted-attributes'

1621 Rule 1: If the implementation requires some measurable time to cancel a Job in the
1622 'processing' or 'processing-stopped' Job states, the Job MUST add the 'processing-to-stop-
1623 point' value to its "job-state-reasons" attribute and then transition itself to the 'canceled' state
1624 when processing ceases [STD92].

1625 **6.1.1 Access Rights**

1626 The authenticated user [STD92] performing this operation MUST be an operator or
1627 administrator of the Printer object [STD92]. Otherwise, Printer MUST reject the operation
1628 without canceling any jobs, MUST return 'client-error-not-authorized' status code for its
1629 response, and MUST NOT return the "job-ids" operation attribute in its response.

1630 **6.1.2 Cancel-Jobs Request**

1631 The following groups of attributes are part of the Cancel-Jobs Request:

1632 Group 1: Operation Attributes

1633 Natural Language and Character Set:

1634 The "attributes-charset" and "attributes-natural-language" attributes [STD92].

1635 Target:

1636 The "printer-uri" (uri) operation attribute MUST be supplied by the Client which
1637 defines the target for this operation [STD92]. The Client MUST NOT supply
1638 and the Printer MUST NOT support the "job-uri" (uri) operation attribute for this
1639 operation.

1640 The "job-ids" (1setOf integer(1:MAX)) MAY be supplied by the Client in the
1641 request to explicitly indicate the "job-id" values of the candidate jobs to be
1642 canceled. If the "job-ids" attribute is not supplied, the Printer MUST consider
1643 all jobs that are cancelable according to Table 3 above as the candidate jobs
1644 and cancel them all. The Client MUST be able to supply this attribute in order
1645 to claim conformance to this operation. The Printer MUST support this attribute
1646 with a list of "job-id" values.

1647 "requesting-user-name" (name(MAX)):

1648 The "requesting-user-name" (name(MAX)) attribute SHOULD be supplied by
1649 the Client [STD92].

1650 "message" (text(127)):

1651 The Client OPTIONALLY supplies this attribute. The Printer object
1652 OPTIONALLY supports this attribute. It is a message to the operator. This
1653 "message" attribute is not the same as the "job-message-from-operator"
1654 attribute. That attribute is used to report a message from the operator to the

1655 end user that queries that attribute. This "message" operation attribute is used
1656 to send a message from the Client to the operator along with the operation
1657 request. It is an implementation decision of how or where to display this
1658 message to the operator (if at all).

1659 **6.1.3 Cancel-Jobs Response**

1660 The following sets of attributes are part of the Cancel-Jobs Response:

1661 Group 1: Operation Attributes

1662 Status Message:

1663 In addition to the REQUIRED status code returned in every response, the
1664 response OPTIONALLY includes a "status-message" (text(255)) and/or a
1665 "detailed-status-message" (text(MAX)) operation attribute [STD92].

1666 Natural Language and Character Set:

1667 The "attributes-charset" and "attributes-natural-language" attributes [STD92].

1668 Group 2: Unsupported Attributes

1669 If the Client had supplied the "job-ids" operation attribute in the request, and
1670 one or more of those specified jobs were in the 'completed', 'canceled', or
1671 'aborted' states (see Table 3 above), the Printer MUST (1) accept the request,
1672 (2) return the 'successful-ok-ignored-or-substituted-attributes' status code, (3)
1673 return the "job-ids" operation attribute with the "job-id" values of the jobs that
1674 could not be canceled [STD92].

1675 **6.2 Cancel-My-Jobs operation**

1676 The REQUIRED Cancel-My-Jobs operation permits a user to cancel a list of their own Not
1677 Completed jobs or all their own Not Completed jobs on the Printer. This operation works like
1678 the Cancel-Job operation [STD92], except that it works on a number of jobs at once. If the
1679 Printer cannot cancel all of the requested jobs successfully, it MUST NOT cancel any and
1680 MUST return an error code along with the list of offending job-ids. A Client MUST be able to
1681 supply and a Printer MUST support this operation in order to claim support of this Job and
1682 Printer Extensions - Set 2 Specification, respectively.

1683 This operation allows a Client to cancel one or more Print Jobs from the time the Job is
1684 created up to the time it is completed, canceled, or aborted. Since a specified Job might
1685 already be printing by the time a Cancel-My-Jobs operation is received, some media sheet
1686 pages might be printed before the Job is actually terminated.

1687 The Client specifies the set of candidate jobs to be canceled by supplying and/or omitting
1688 the "job-ids" (1setOf integer(1:MAX)) (see section 5.2.1 below), First, the Printer MUST

1689 check the access rights of the requesting user against all of the candidate jobs (see Access
1690 Rights below). If any of the candidate jobs are not owned by the requesting user, the Printer
1691 MUST NOT cancel any jobs and MUST return the 'client-error-not-authorized' error status
1692 code along with the list of offending "job-id" values in the "job-ids" operation attribute (see
1693 section 5.1.2). If this check succeeds, then (and only then) the Printer MUST accept or reject
1694 the request based on the current state of each of the candidate jobs and transition each Job
1695 to the indicated new state as shown in Table 3 above. If any of the candidate jobs cannot be
1696 canceled, the Printer MUST NOT cancel any jobs and MUST return the indicated error status
1697 code along with the list of offending "job-id" values in the "job-ids" operation attribute (see
1698 section 5.1.2).

1699 **6.2.1 Access Rights**

1700 If the Client supplied the "job-ids" attribute, the authenticated user [STD92] performing this
1701 operation MUST be the Job owner of all the candidate jobs. If any of the supplied "job-ids"
1702 specify jobs that do not belong to the requesting user, the IPP object MUST (1) reject the
1703 operation without canceling any jobs, (2) return: 'client-error-not-authorized', and (3) MUST
1704 return the "job-ids" operation attribute with any specified jobs that are not owned by the
1705 requesting user (see section 5.2.2 below).

1706 **6.2.2 Cancel-My-Jobs Request**

1707 The following groups of attributes are part of the Cancel-My-Jobs Request:

1708 Group 1: Operation Attributes

1709 Natural Language and Character Set:

1710 The "attributes-charset" and "attributes-natural-language" attributes as
1711 described in section 3.1.4.1.

1712 Target:

1713 The "printer-uri" (uri) operation attribute MUST be supplied by the Client which
1714 defines the target for this operation [STD92]. The Client MUST NOT supply
1715 and the Printer MUST NOT support the "job-uri" (uri) operation attribute for this
1716 operation.

1717 The "job-ids" (1setOf integer(1:MAX)) MAY be supplied by the Client in the
1718 request to explicitly indicate the "job-id" values of the candidate jobs to be
1719 canceled. If the "job-ids" attribute is not supplied, the Printer MUST consider
1720 all jobs that are both (1) owned by the requesting user AND (2) are cancelable
1721 according to Table 3 above as the candidate jobs and cancel them all. The
1722 Client MUST be able to supply this attribute in order to claim conformance to
1723 this operation. The Printer MUST support this attribute with a list of "job-id"
1724 values.

1725 "requesting-user-name" (name(MAX)):

1726 The "requesting-user-name" (name(MAX)) attribute SHOULD be supplied by
1727 the Client [STD92].

1728 "message" (text(127)):

1729 The Client OPTIONALLY supplies this attribute. The Printer object
1730 OPTIONALLY supports this attribute. It is a message to the operator. This
1731 "message" attribute is not the same as the "job-message-from-operator"
1732 attribute. That attribute is used to report a message from the operator to the
1733 end user that queries that attribute. This "message" operation attribute is used
1734 to send a message from the Client to the operator along with the operation
1735 request. It is an implementation decision of how or where to display this
1736 message to the operator (if at all).

1737 **6.2.3 Cancel-My-Jobs Response**

1738 The following sets of attributes are part of the Cancel-My-Jobs Response:

1739 Group 1: Operation Attributes

1740 Status Message:

1741 In addition to the REQUIRED status code returned in every response, the
1742 response OPTIONALLY includes a "status-message" (text(255)) and/or a
1743 "detailed-status-message" (text(MAX)) operation attribute [STD92].

1744 Natural Language and Character Set:

1745 The "attributes-charset" and "attributes-natural-language" attributes [STD92]

1746 Group 2: Unsupported Attributes

1747 If the Client had supplied the "job-ids" operation attribute in the request, and
1748 one or more of those specified jobs failed the Job status check defined in Table
1749 3 above, the Printer MUST (1) accept the request, (2) return the 'successful-
1750 ok-ignored-or-substituted-attributes' status code, (3) return the "job-ids"
1751 operation attribute with the "job-id" values of the jobs that could not be
1752 canceled [STD92].

1753 **6.3 Close-Job Operation**

1754 The REQUIRED Close-Job operation allows a Client to close a multi-document job, i.e., a
1755 Job that was opened with a Create-Job operation [STD92] followed by zero or more Send-
1756 Document and/or Send-URI operations [STD92]. It is semantically similar to a Send-
1757 Document operation with the "last-document" operation attribute supplied with a 'true' value

1758 with no document data (except that with the Close-Job operation the Printer MUST NOT add
1759 an additional document object) [STD92].

1760 A Client SHOULD check to see if the Printer supports the Close-Job operation by querying
1761 the values of the "operations-supported" Printer Description attribute.

1762 **6.3.1 Access Rights**

1763 The authenticated user [STD92] performing this operation must either be the Job owner (as
1764 determined in the Create-Job operation) or an operator or administrator of the Printer object
1765 [STD92]. Otherwise, the IPP object MUST reject the operation and return: 'client-error-
1766 forbidden', 'client-error-not-authenticated', or 'client-error-not-authorized' as appropriate.

1767 **6.3.2 Close-Job Request**

1768 The following attributes are part of the Close-Job Request:

1769 Group 1: Operation Attributes

1770 Natural Language and Character Set:

1771 The "attributes-charset" and "attributes-natural-language" attributes [STD92].

1772 Target:

1773 The "printer-uri" (uri) plus "job-id" (integer(1:MAX)) which define the target for
1774 this operation [STD92]. The Client MUST NOT supply and the Printer MUST
1775 NOT support the "job-uri" (uri) operation attribute for this operation.

1776 "requesting-user-name" (name(MAX)):

1777 The "requesting-user-name" (name(MAX)) attribute SHOULD be supplied by
1778 the Client [STD92].

1779 **6.3.3 Close-Job Response**

1780 The following attributes are part of the Close-Job Response:

1781 Group 1: Operation Attributes

1782 Status Message:

1783 In addition to the REQUIRED status code returned in every response, the
1784 response OPTIONALLY includes a "status-message" (text(255)) and/or a
1785 "detailed-status-message" (text(MAX)) operation attribute [STD92].

1786 Natural Language and Character Set:

1787 The "attributes-charset" and "attributes-natural-language" attributes [STD92].

1788 Group 2: Unsupported Attributes

1789 See [RFC8011] section 4.1.7 for details on returning Unsupported Attributes.

1790 Group 3: Job Object Attributes

1791 This is the same set of attributes as described in the Print-Job response [STD92].

1792 6.4 Resubmit-Job Operation

1793 The REQUIRED Resubmit-Job operation allows a Client to start a copy of a Retained Job
1794 that is retained in the queue after processing has completed [STD92], supply changes to
1795 attributes that were supplied in the original jobs and to supply additional attributes for that
1796 copy before starting. A Client MUST be able to supply and a Printer MUST support this
1797 operation in order to claim support of this IPP Job and Printer Extensions – Set 2 v2.0,
1798 respectively.

1799 The new Job's state is set to 'pending' or 'pending-held' and restarts at the beginning on the
1800 same IPP Printer object. If any of the Documents in the Job were passed by reference (Print-
1801 URI or Send-URI), the Printer MUST re-fetch the data, since the semantics of Resubmit-Job
1802 are to repeat all Job processing. The Job Description attributes that accumulate Job
1803 progress, such as "job-impressions-completed", "job-media-sheets-completed", and "job-k-
1804 octets-processed", MUST be reset to 0 so that they give an accurate record of the new job.
1805 The Job object MUST use new values for the "job-uri" and "job-id" attribute values as
1806 assigned by the Printer.

1807 If the Retained Job already contains the same operation or Job Template attribute with a
1808 different value, the value supplied in the Resubmit-Job operation MUST override (if
1809 supported by the Printer). If the Retained Job does not contain such an Operation or Job
1810 Template attribute, the value supplied with the Resubmit-Job operation MUST apply (if
1811 supported by the Printer). When reprinting a Saved Job, the Printer MUST NOT copy the
1812 "job-save-disposition" attribute to the copy; otherwise, the Job would be saved again. Only
1813 if the Client supplies the "job-save-disposition" attribute in the Resubmit-Job operation will
1814 the Job be saved again. Similarly, when reprinting a Proof Print Job, the Printer MUST NOT
1815 copy the "proof-print" attribute to the Job copy; otherwise, the Job would be proofed again.
1816 Only if the Client supplies the "proof-print" attribute in the Resubmit-Job operation will the
1817 Job be proofed again.

1818 The Printer MUST accept or reject the Resubmit-Job request based on the original Job's
1819 current state as follows:

1820 **Table 14 - State Transition Table for the Resubmit-Job operation**

"job-state"	IPP object's response status code and action
-------------	--

'pending'	'client-error-not-possible'
'pending-held'	'client-error-not-possible'
'processing'	'client-error-not-possible'
'processing-stopped'	'client-error-not-possible'
'completed'	'successful-ok' - A copy of the Job is started over.
'completed'	'client-error-not-possible' - see Rule 1
'cancelled'	'successful-ok' - A copy of the Job is started over.
'cancelled'	'client-error-not-possible' - see Rule 1
'aborted'	'successful-ok' - A copy of the Job is started over. The new copy of the Job will abort again, if the abort condition is still true.
'aborted'	'client-error-not-possible' - see Rule 1

1821 Rule 1: If the Job Retention Period has expired for the Job in this state, then the IPP object
 1822 rejects the operation [STD92].

1823 Note: In order to prevent a user from inadvertently restarting a Job in the middle, the
 1824 Resubmit-Job request is rejected when the Job is in the 'processing' or 'processing-
 1825 stopped' states. If in the future an operation is needed to hold or restart jobs while in
 1826 these states, it will be added as an additional operation, rather than overloading the
 1827 Resubmit-Job operation, so that it is clear that the user intended that the current
 1828 Job not be completed.

1829 **6.4.1 Access Rights**

1830 The authenticated user [STD92] performing this operation must either be the Job owner or
 1831 an operator or administrator of the Printer object [STD92]. Otherwise, the IPP object MUST
 1832 reject the operation and return: 'client-error-forbidden', 'client-error-not-authenticated', or
 1833 'client-error-not-authorized' as appropriate.

1834 **6.4.2 Resubmit-Job Request**

1835 The groups and attributes are the same as for a Print-Job request [STD92], except that the
 1836 Client MUST NOT supply the “document-format” attribute and MUST NOT append
 1837 document data to the request. If the Client does supply “document-format”, the Printer MUST
 1838 return: ‘client-error-bad-request’. The following additional Group 1 Operation attributes are
 1839 defined:

1840 Target:

1841 The "printer-uri" (uri) plus "job-id" (integer(1:MAX)) which define the target for
1842 this operation [STD92]. The Client MUST NOT supply and the Printer MUST
1843 NOT support the "job-uri" (uri) operation attribute for this operation.

1844 **6.4.3 Resubmit-Job Response**

1845 The groups and attributes are the same as for a Cancel-Job response [STD92].

1846 **6.5 Reprocess-Job operation**

1847 The REQUIRED Reprocess-Job operation allows a user to re-process an exact copy of a
1848 Retained Job. This operation is defined in [RFC3998].

1849 **7. New Values for Existing Attributes**

1850 This section defines additional values for existing attributes. The existing text for those
1851 attributes is not reproduced here in order to prevent deviations.

1852 **7.1 pdl-override-supported (type2 keyword)**

1853 The following additional OPTIONAL value is defined for the "pdl-override-supported" (type2
1854 keyword) Printer Description attribute [STD92]: 'guaranteed': This value indicates that the
1855 Printer object:

- 1856 1. Guarantees that the IPP Job Template attribute values take precedence over
1857 instructions of any form embedded anywhere in the document data.
- 1858 2. Guarantees that no PDL instruction is performed that does not correspond to a
1859 current value in the corresponding "xxx-supported" Printer attribute. In such a
1860 situation, the Printer MAY (a) abort the job, (b) stop the Printer, (c) hold the job, or (d)
1861 substitute on the fly with one of the current values of its "xxx-supported" attribute. This
1862 choice MAY be fixed by the implementation or configurable by the system
1863 administrator and MAY depend on the attribute.
- 1864 3. Provides the "queue override" semantics as described below, if the "xxx-supported"
1865 Printer attribute is configured with only a single value.

1866 See [STD92] for a full description of how this attribute interacts with and affects other IPP
1867 attributes, especially the "ipp-attribute-fidelity" attribute.

1868 **7.1.1 Additional semantics for 'guaranteed' value of "pdl-override-supported"** 1869 **attribute**

1870 If a Printer's "pdl-override-supported" is 'guaranteed', then the Printer MUST follow these
1871 additional semantics for Job Creation requests and Get-Job-Attributes or Get-Jobs
1872 responses.

1873 Whether or not the Client supplied the "xxx" Job attribute in the Job Creation operation, the
1874 Printer MUST accept or reject the Job based on "ipp-attribute-fidelity" as usual. However, if
1875 "ipp-attribute-fidelity" was 'false' and the supplied "xxx" value did not match any of the "xxx-
1876 supported" values, the Printer MUST accept the Job as usual, but MUST NOT store that
1877 attribute on the Job object. The Printer MUST return an "xxx" Job attribute in subsequent
1878 Get-Job-Attributes and Get-Jobs responses according to the following rules:

1879 a) If the Client did not supply the "xxx" Job attribute in the Job Creation operation and
1880 the current value of the Printer's "xxx-supported" attribute has only a single value
1881 (the so-called queue override case), then the Printer MUST return an "xxx" attribute
1882 with that current single value in a Get-Job-Attributes or Get-Jobs, response, as if the
1883 Client had supplied "xxx" Job attribute with that value.
1884

1885 **Rationale for this new behavior:** because the printed result will be the same as if
1886 the Client had supplied the "xxx" Job attribute with that single value (since that
1887 value will override a corresponding PDL instruction), the response should reflect
1888 those (new) semantics.

1889 b) If the Client did not supply the "xxx" Job attribute in the Job Creation operation and
1890 the current value of the Printer's "xxx-supported" attribute has more than one value,
1891 then the Printer MUST NOT return that "xxx" attribute in a Get-Job-Attributes or Get-
1892 Jobs response.
1893

1894 **Rationale for this new behavior:** Same behavior as for the other values of "pdl-
1895 override-supported".

1896 c) If the Client did supply the "xxx" Job attribute in the Job Creation operation and the
1897 current value of the Printer's "xxx-supported" attribute has only a single value (the
1898 so-called queue override case), then the Printer MUST return that "xxx" Job
1899 attribute with the Printer's current "xxx-supported" value in a Get-Job-Attributes or
1900 Get-Jobs response, as if the Client had supplied "xxx" with that value.
1901

1902 **Rationale for this new behavior:** because the behavior of the Printer is to enforce
1903 that "xxx" Job attribute with the Printer's current single (override) value.

1904 d) If the Client did supply the "xxx" attribute in the Job Creation operation and the
1905 current value of the Printer's "xxx-supported" attribute has more than one value and
1906 one of them match, then the Printer MUST return that "xxx" Job attribute with the
1907 Client-supplied value in a Get-Job-Attributes or Get-Jobs response.
1908

1909 **Rationale for this new behavior:** Same behavior as for the other values of "pdl-
1910 override-supported".

1911 e) If the Client did supply the "xxx" attribute in the Job Creation operation and the
1912 current value of the Printer's "xxx-supported" attribute has more than one value but
1913 none of them match, then the Printer MUST NOT return that "xxx" Job attribute with
1914 the Client-supplied value in a Get-Job-Attributes or Get-Jobs response. It MUST

1915 either (1) not return the attribute at all or return it with one of the supported values,
 1916 depending on implementation.

1917
 1918 **Rationale for this new behavior:** Same behavior as for the other values of "pdl-
 1919 override-supported".

1920 The above five cases are represented in Table 13.

1921 **Table 15 - Rules for 'guaranteed' value of "pdl-override-supported" attribute**

Client Supplies	Printer supports "xxx-supported"	Printer's response to Job query request	Queue override?
omits "xxx"	'a'	"xxx" = 'a'	yes
omits "xxx"	'a', 'b'	nothing is returned	no
supplies "xxx" = ?	'a'	"xxx" = 'a'	yes
supplies "xxx" = 'a'	'a', 'b'	"xxx" = 'a'	no
supplies "xxx" = 'c'	'a', 'b'	Either nothing is returned or "xxx" = one of the supported values, depending on implementation.	no

1922 **7.1.2 Examples of queue override**

1923 The queue override extension allows an implementation to guarantee that only advertised
 1924 supported attribute values are actually performed, and that unsupported values embedded
 1925 as instructions in the document data, will not be performed. This extension is also a further
 1926 step in making a Printer object indicate what it really supports in both the protocol and the
 1927 PDL and what it does not, i.e., "truth in advertising". In other words, the absence of a value
 1928 in the Printer's "xxx-supported" attribute indicates a guarantee that the value cannot be
 1929 performed.

1930 For example, an administrator that wants to force two-sided printing could set the Printer's
 1931 "sides-supported" to one of the two values: 'two-sided-long', 'two-sided-short' [STD92]. Thus,
 1932 a PDL that contained an embedded simplex (one-sided) instruction would be overridden in
 1933 one of the following ways: (1) aborted, (2) held, or (3) automatically forced to two-sided,
 1934 depending on implementation and/or site policy.

1935 As another example, an administrator could set up an IPP Printer that always staples by
 1936 setting the "finishings-supported" to 'staple' only, i.e. by removing the 'none' keyword value
 1937 [STD92]. In order to allow jobs not to be stapled on the same physical piece of hardware,
 1938 the administrator would use fan-in (if supported) to set up another IPP Printer that does
 1939 include the 'none' keyword value in its "finishings-supported" attribute.

1940 The values of the Printer's "xxx-supported" attribute are not only what the Printer will accept
1941 in the print protocol (e.g. IPP) as attributes, but also as corresponding values of embedded
1942 PDL instructions. If a value that is not in the "xxx-supported" list is encountered in either the
1943 print protocol or the PDL, it MUST NOT be performed (no matter what the value of "ipp-
1944 attribute-fidelity" is).

1945 The four combinations of unsupported IPP attribute values and unsupported PDL instruction
1946 values are:

1947 1. Unsupported attribute value in the protocol and "ipp-attribute-fidelity" = 'false'
1948 (independent of "pdl-override-supported"):

1949
1950 The Printer object MUST accept the Job with the unsupported attribute value.
1951 However, the Printer object will always return only one of its "xxx-supported" values
1952 in response to Get-Jobs or Get-Job-Attributes. Depending on implementation, the
1953 Printer can perform this substitution once at Job submission time, or each time the
1954 Job is queried.

1955 2. Unsupported attribute value in the protocol and "ipp-attribute-fidelity" = 'true'
1956 (independent of "pdl-override-supported"):

1957
1958 The Printer MUST reject the job.

1959 3. Unsupported embedded instruction value in the PDL and "pdl-override-supported" =
1960 'attempted' or 'not-attempted' (and independent of "ipp-attribute-fidelity"):

1961
1962 When an implementation encounters a value that is not in the "xxx-supported" list, it
1963 makes no special action and allows it to be performed. See the definition of
1964 "Supports" in [STD92] that indicates that performing a PDL instruction that is not
1965 supported in the protocol is an allowed behavior.

1966 4. (New case) Unsupported embedded instruction value in the PDL and "pdl-override-
1967 supported" = 'guaranteed' (and independent of "ipp-attribute-fidelity"):

1968
1969 The unsupported embedded instruction value MUST NOT be performed. The
1970 behavior is implementation-dependent if an unsupported embedded instruction
1971 value is encountered. For example, the Printer MAY abort the Job or substitute on
1972 the fly with one of the current values of its "xxx-supported" attribute. This choice
1973 MAY be fixed by the implementation or configurable by the system administrator
1974 and MAY depend on the Job Template attribute.

1975 **7.2 which-jobs (type2 keyword)**

1976 This section defines additional keyword values for the IPP "which-jobs" (type2 keyword)
1977 Operation attribute of the Get-Jobs operation [STD92] and the "which-jobs-supported"
1978 (1setOf type2 keyword) Printer Description attribute (see section 10.9) to include keywords

1979 corresponding to the symbolic names of all IPP “job-state” enum values [PWG5100.3], an
 1980 ‘all’ value, and values to correspond to Proof Print Jobs and Saved Jobs. The following
 1981 keywords are OPTIONAL to support, unless indicated otherwise in their descriptions.

Keyword	Description
'aborted'	This includes any Job object whose state is 'aborted'. This value corresponds to the symbolic name of the corresponding value for the “job-state” attribute.
'all'	This includes all Job objects, that is any Job object that is considered 'completed' or 'not-completed' as defined by these values above.
'canceled'	This includes any Job object whose state is 'canceled'. This value corresponds to the symbolic name of the corresponding value for the “job-state” attribute.
'pending'	This includes any Job object whose state is 'pending'. This value corresponds to the symbolic name of the corresponding value for the “job-state” attribute.
'pending-held'	This includes any Job object whose state is 'pending-held'. This value corresponds to the symbolic name of the corresponding value for the “job-state” attribute.
'processing'	This includes any Job object whose state is 'processing'. This value corresponds to the symbolic name of the corresponding value for the “job-state” attribute.
'processing-stopped'	This includes any Job object whose state is 'processing-stopped'. This value corresponds to the symbolic name of the corresponding value for the “job-state” attribute.
'proof-print'	Proof Print Jobs, i.e., jobs that have been submitted using the "proof-print" Job Template attribute and which are in the ‘completed’, ‘canceled’, or ‘aborted’ state. If the "proof-print" Job Template attribute is supported, this value MUST be supported.
'saved'	Saved Jobs, i.e., jobs that have been saved using the "job-save-disposition" Job Template attribute and which are in the ‘completed’, ‘canceled’, or ‘aborted’ state. If the "job-save-disposition" Job Template attribute is supported, this value MUST be supported.

1982 **7.3 job-state-reasons (1setOf type2 keyword)**

1983 The following table defines additional keyword values for the IPP “job-state-reasons” Job
 1984 Description attribute [STD92] [RFC3998] [PWG5100.3] [PWG5100.6]. The descriptions
 1985 indicate conditional conformance, if any.

Keyword	Description
'job-printed-successfully'	The Job was successfully printed but was not successfully saved as indicated by 'job-saved-with-warnings' or 'job-saved-with-errors'. If the Job was not requested to be saved, then use the 'job-completed-successfully' value instead. If the "job-save-disposition" Job Template attribute is supported, this value MUST be supported.
'job-printed-with-errors'	The Job was printed with errors but was successfully saved as indicated by 'job-saved-successfully' or was not successfully saved as indicated by 'job-saved-with-warnings' or 'job-saved-with-errors'. If the Job was not requested to be saved, then use the 'job-completed-with-errors' value instead. If the "job-save-disposition" Job Template attribute is supported, this value MUST be supported.
'job-resuming'	The Printer is in the process of moving the Job from a suspended condition to a candidate for processing. If the Resume-Job operation [RFC3998] is supported, this value MUST be supported.
'job-saved-successfully'	The Job was successfully saved. The Printer MUST also supply 'job-completed-successfully', except when “save-disposition” = ‘save-only’. If the "job-save-disposition" Job Template attribute is supported, this value MUST be supported.
'job-saved-with-errors'	The Job did not save successfully (whether or not it was printed successfully, printed with warnings, printed with errors, or not printed). The Printer MUST ensure that none of the saved Job is accessible, if it was unable to successfully save all of the job. If the "job-save-disposition" Job Template attribute is supported, this value MUST be supported.
'job-saved-with-warnings'	The Job was saved with warnings. If the "job-save-disposition" Job Template attribute is supported, this value MUST be supported.
'job-saving'	The Printer is transmitting the Job to the save location. This is similar to the 'job-printing' value. If the "job-save-disposition" Job Template attribute is supported, this value MUST be supported.

'job-spooling'	Same as 'job-incoming' with the specialization that the Printer is spooling the document data before processing it. This value corresponds to the 'spool' or 'automatic' value of the "job-spooling-supported" Printer Description attribute.
'job-streaming'	Same as 'job-incoming' with the specialization that the Printer is processing the document data as it is being received (that is, the Job is not being spooled, but rather is being processed in chunks by the output device and is being imaged during reception). This value corresponds to the 'stream' or 'automatic' value of the "job-spooling-supported" Printer Description attribute.
'job-suspended-by-operator'	The Job has been indefinitely suspended by the Printer operator. If the Suspend-Current-Job operation [RFC3998] is supported, this value MUST be supported.
'job-suspended-by-system'	The Job has been indefinitely suspended by the Printer's system software during normal processing of the job.
'job-suspended-by-user'	The Job has been indefinitely suspended by the user. If the Suspend-Current-Job operation [RFC3998] is supported, this value MUST be supported.
'job-suspending'	The Printer is in the process of moving the Job from a processing condition to a suspended condition where other jobs can be processed. If the Suspend-Current-Job operation [RFC3998] is supported, this value MUST be supported.

1986 Note: The semantics of this attribute or the set of valid values may be different for different
1987 document formats.

1988 **7.3.1 Additional Semantics for "job-state-reasons" attribute for "job-save-**
1989 **disposition" attribute**

1990 This section defines additional values that are defined in support of the "job-save-
1991 disposition" attribute in section 7.9).

1992 Many of the existing "job-state-reasons" attribute values can apply to a 'save-only' Job as
1993 well as a Job submitted for printing. If the value of the "job-disposition" attribute is 'save-
1994 only', the "job-state-reasons" attribute MAY be set with existing values such as 'job-
1995 incoming', 'resources-are-not-ready' (such as a font), 'job-interpreting', and 'job-queued'.
1996 Likewise, errors that occur on a saved Job MAY have existing "job-state-reasons" attribute
1997 values such as 'job-data-insufficient', 'document-access-error', 'submission-interrupted', 'job-
1998 canceled-by-user', 'aborted-by-system', etc.

1999 There are also new four new "job-state-reasons" keyword values REQUIRED that support a
 2000 saved Job -- 'job-saving', 'job-saved-successfully', 'job-saved-with-warnings', and 'job-
 2001 saved-with-errors' -- and these have been added to the list defined above. The existing 'job-
 2002 completed-successfully', 'job-completed-with-warnings', and 'job-completed-with-errors'
 2003 values are also clarified in the list above for implementations that support the "job-save-
 2004 disposition" Job Template attribute, in such a way that these values remain compatible with
 2005 Printers and clients that do not support Job saving.

2006 Table 14 enumerates the possible combinations of print and save success, warning, and
 2007 error conditions. Note that two values occur only when there are print warnings/errors and a
 2008 save error.

2009 **Table 16 - Values of "job-state-reasons" attribute for various Job conditions**

	Not saving	Save was successful	Save was unsuccessful
Not printing	<not possible>	'job-completed-successfully'	'job-saved-with-errors'
Print successful	'job-completed-successfully'	'job-completed-successfully'	'job-saved-with-errors'
Print warnings	'job-completed-with-warnings'	'job-completed-with-warnings'	'job-completed-with-warnings', 'job-saved-with-errors'
Print errors	'job-completed-with-errors'	'job-completed-with-errors'	'job-completed-with-errors', 'job-saved-with-errors'
Print warnings and errors	'job-completed-with-errors'	'job-completed-with-errors'	'job-completed-with-errors', 'job-saved-with-errors'

2010

2011 **8. Deprecated Attributes**

2012 The following attributes are deprecated as of IPP Job and Printer Extensions - Set 2 v2.0.

- 2013
 - ???

2014 **9. Additional Semantics for Existing Operations**

2015 This section adds additional semantics to the following existing operations that are defined
 2016 in other documents:

- 2017
 1. Get-Jobs [STD92]

2018 2. Hold-Job [STD92]

2019 3. Set-Job-Attributes [RFC3380]

2020 **9.1 Get-Jobs: which-jobs (type2 keyword)**

2021 The "which-jobs" attribute If supplied and the keyword specified is supported by the Printer's
2022 "which-job-supported" attribute (section 7.2), the Printer MUST only return job-id values for
2023 those Jobs that match the semantics of the Client specified keyword.

2024 **9.2 Hold-Job: job-hold-until-time (dateTime)**

2025 The "job-hold-until-time" attribute MAY be supported as a Group 1 Operation attribute by the
2026 OPTIONAL Hold-Job operation [STD92], in addition to or as a substitute for the "job-hold-
2027 until" attribute [STD92]. If the Client does not supply either the "job-hold-until" or the "job-
2028 hold-until-time" Operation attributes in the Hold-Job request, the Job MUST create a "job-
2029 hold-until" attribute and set its value to 'indefinite' and hold the Job indefinitely, until a Client
2030 performs a Release-Job operation [STD92] or a Set-Job-Attributes operation as discussed
2031 in section 9.3.

2032 If supplied and supported as specified in the Printer's "job-hold-until-time-supported"
2033 attribute, the Job MUST replace its previous "job-hold-until" or "job-hold-until-time" attribute,
2034 if present, MUST add the 'job-hold-until-specified' value to its "job-state-reasons" attribute,
2035 and MUST make itself a candidate for scheduling after the specified dateTime value.

2036 If the Client supplies a value that specifies a dateTime that has already occurred, and the
2037 Job also supports the "job-hold-until-time" operation attribute, the Job MUST accept the
2038 request, and MUST remove the 'job-hold-until-specified' value from its "job-state-reasons"
2039 attribute, if present. If there are no other reasons to hold the Job, the Job MUST make itself
2040 a candidate for processing immediately [STD92].

2041 If supplied, but either the "job-hold-until-time" Operation attribute itself or the value supplied
2042 is not supported, i.e., is out of range, the Job MUST accept the request, MUST add the "job-
2043 hold-until" = 'indefinite' attribute, MUST add the 'job-hold-until-specified' value to its "job-
2044 state-reasons" attribute, MUST return the unsupported attribute or value in the Unsupported
2045 Attributes Group [STD92], MUST return 'successful-ok-ignored-or-substituted-attributes' as
2046 the operation response status code, and the Printer MUST hold the Job indefinitely until a
2047 Client performs a subsequent Release-Job operation.

2048 **9.3 Set-Job-Attributes**

2049 The following Job Template attributes MAY be settable using the Set-Job-Attributes
2050 operation [RFC3380], in which case they MUST be so indicated as values returned by the
2051 Printer's "job-settable-attributes-supported" attribute [RFC3380]:

2052 1. "job-delay-output-until" (type2 keyword | name(MAX)) - see section 7.4

2053 2. "job-delay-output-until-time" (dateTime) - see section 7.5.

2054 3. "job-hold-until" (type2 keyword | name(MAX)) - see [STD92]

2055 4. "job-hold-until-time" (dateTime) - see section 7.6

2056 **9.3.1 Set-Job-Attributes: job-delay-output-until (type2 keyword | name(MAX)) and**
2057 **job-delay-output-until-time" (dateTime)**

2058 If either the "job-delay-output-until" or the "job-delay-output-until-time" operation attribute is
2059 supplied in the Set-Job-Attributes operation request, and is specified in the Printer's "job-
2060 settable-attributes-supported" attribute [RFC3380], the Job object MUST update its previous
2061 "job-delay-output-until" or "job-delay-output-until-time" attribute values, if present, MUST
2062 add the 'job-delay-output-until-specified' value to the job's "job-state-reasons" attribute, and
2063 MUST make the Job a candidate for scheduling after the specified date-time.

2064 The "job-delay-output-until" and "job-delay-output-until-time" attributes are mutually
2065 exclusive. If one is set on the Job and the other is supplied in a Set-Job-Attributes operation,
2066 the one supplied replaces the other on the job. Furthermore, as with Job Creation operations,
2067 a Client MUST NOT supply both a "job-delay-output-until" and a "job-delay-output-until-time"
2068 attribute in the same Set-Job-Attributes request. If a Client does supply such a malformed
2069 request, the Printer MUST reject the request and return the 'client-error-conflicting-attributes'
2070 status code [STD92].

2071 If the Client (1) supplies a value that specifies a period or date-time that has already occurred
2072 and (2) the IPP object supports the "job-delay-output-until" or "job-delay-output-until-time"
2073 operation attribute, respectively, the IPP object MUST accept the request, MUST remove
2074 the 'job-delay-output-until-specified' value from the job's "job-state-reasons" attribute, if
2075 present. If there are no other reasons to hold the job, the IPP object MUST make the Job be
2076 a candidate for processing immediately [STD92].

2077 If supplied, but either the "job-delay-output-until" or the "job-delay-output-until-time"
2078 operation attribute itself or the value supplied is not supported, i.e., is out of range, the IPP
2079 object MUST accept the request, MUST add the "job-delay-output-until" = 'indefinite'
2080 attribute, MUST add the 'job-delay-output-until-specified' value to the job's "job-state-
2081 reasons" attribute, MUST return the unsupported attribute or value in the Unsupported
2082 Attributes Group [STD92], MUST return the 'successful-ok-ignored-or-substituted-attributes'
2083 operation status code [STD92], and MUST hold the Job indefinitely until a Client performs a
2084 subsequent Release-Job operation [STD92].

2085 **9.3.2 Set-Job-Attributes: job-hold-until (type2 keyword | name(MAX)) and job-hold-**
2086 **until-time (dateTime) operation attributes**

2087 If either the "job-hold-until" or the "job-hold-until-time" operation attribute is supplied in the
2088 Set-Job-Attributes operation and supported as specified in the Printer's "job-settable-
2089 attributes-supported" attribute [RFC3380], the IPP object MUST copy the supplied operation
2090 attribute to the Job object, replacing the job's previous "job-hold-until" or "job-hold-until-time"

2091 attribute, if present, MUST add the 'job-hold-until-specified' value to the job's "job-state-
2092 reasons" attribute, and MUST make the Job a candidate for scheduling after the specified
2093 date-time.

2094 The "job-hold-until" and "job-hold-until-time" attributes are mutually exclusive. If one is set
2095 on the Job and the other is supplied in a Set-Job-Attributes operation, the one supplied
2096 replaces the other on the job. Furthermore, as with Job Creation operations, a Client MUST
2097 NOT supply both a "job-hold-until" and a "job-hold-until-time" attribute in the same Set-Job-
2098 Attributes request. If a Client does supply such a malformed request, the Printer MUST reject
2099 the request and return the 'client-error-conflicting-attributes' status code [STD92].

2100 If the Client supplies a value that specifies a period or dateTime that has already occurred
2101 and the Job supports the "job-hold-until" or "job-hold-until-time" operation attribute,
2102 respectively, the Job MUST accept the Set-Job-Attributes request and MUST remove the
2103 'job-hold-until-specified' value from its "job-state-reasons" attribute, if present. If there are no
2104 other reasons to hold the job, the IPP object MUST make the Job be a candidate for
2105 processing immediately [STD92].

2106 If supplied, but either the "job-hold-until" or "job-hold-until-time" operation attribute itself or
2107 the value supplied is not supported, i.e., is out of range, the Job MUST accept the request,
2108 MUST add the "job-hold-until" attribute to itself and set its value to 'indefinite', MUST add the
2109 'job-hold-until-specified' value to its "job-state-reasons" attribute, MUST report it as
2110 unsupported by listing the unsupported attribute or value in the Unsupported Attributes
2111 Group in the operation response [STD92], MUST return the 'successful-ok-ignored-or-
2112 substituted-attributes' status code, and MUST hold the Job indefinitely until a Client performs
2113 a subsequent Release-Job operation [STD92].

2114 **10. Conformance Requirements**

2115 This section summarizes the Conformance Requirements detailed in the definitions in this
2116 document for clients and Printer objects (servers or devices).

2117 **10.1 Conformance Requirements for this specification**

2118 In order for a client and a Printer to claim conformance to this IPP Job and Printer Extensions
2119 – Set 2 v2.0 Specification, a client MUST be able to supply and a Printer MUST support the
2120 following:

- 2121 1. The Cancel-Jobs operation (section 5.1)
- 2122 2. The Cancel-My-Jobs operation (section 5.2)
- 2123 3. The Close-Job operation (section 5.3)
- 2124 4. The Resubmit-Job operation (section 5.4)

- 2125 5. The Reprocess-Job operation [RFC3998]
- 2126 6. The "job-ids" Operation attribute (section 6.3) in the Get-Jobs operation [STD92]
- 2127 (section 3.2.6)
- 2128 7. The "job-ids" Operation attribute (section 6.3) in the Purge-Jobs operation [STD92],
- 2129 if Purge-Jobs operation is supported (section 6.4)
- 2130 8. The "proof-print" Job Template attribute (sections 7.11). See also section 12.5
- 2131 Conformance Requirements for the REQUIRED "proof-print" Job Template attribute
- 2132 9. The "job-ids-supported" Printer Description attribute (section 10.2)
- 2133 10. The "which-jobs-supported" Printer Description attribute (see section 10.9 for which
- 2134 values)

2135 The other attributes defined in this specification are OPTIONAL for a client to be able to

2136 supply and for a Printer to support.

2137 **10.2 Conditional Conformance Requirements for Printer objects**

2138 The following conditional conformance requirements are defined:

2139

If the Printer supports:	then the Printer MUST also support:
"job-hold-until-time" Job Template attribute in Job Creation operations	"job-hold-until" Job Template attribute [STD92] and the Hold-Job operation with the "job-hold- until" [STD92] and "job-hold-until-time" (see section 8.1 above) Operation attributes and the Release-Job operation.
"job-delay-output-until-time" Job Template attribute in Job Creation operations	"job-delay-output-until" Job Template attribute (see section 7.4 above) and the Set-Job-Attributes operation (see section 8.2 above).
"job-delay-output-until" Job Template attribute in Job Creation operations	Set-Job-Attributes operation (see section 8.2 above).

2140 Each of the collection attribute definitions indicate which member attributes are REQUIRED

2141 and which are OPTIONAL for a Printer to support and is not repeated here.

2142 If a Printer supports the 'collection' attribute syntax of a Job Template attribute , then it MUST

2143 support the distinguished none value defined for that collection. See section 2.7 of

2144 [PWG5100.3].

2145 Support of the 'name' attribute syntax for Job Template attributes and collection member

2146 attributes is OPTIONAL, as in IPP/1.1 [STD92].

2147 **10.3 Conformance Requirements for Clients**

2148 Clients that support a "xxx" collection Job Template attribute SHOULD use the Get-Printer-
2149 Attributes request to obtain the "xxx-default" collection and display that to the user, so that
2150 the user can make any changes before submitting the Job. Then the client submits values
2151 for all member attributes, rather than depending on the Printer's defaulting for omitted
2152 member attributes, since such defaulting is implementation dependent and will vary from
2153 Printer to Printer.

2154 **10.4 Conformance Requirements for the OPTIONAL "job-save- 2155 disposition" Job Template attribute**

2156 This section specifies the conformance requirements for Printers and clients if they support
2157 the OPTIONAL "job- save-disposition" Job Template attribute. It also defines the
2158 conformance requirements for Job Save Format specifications.

2159 **10.4.1 Client Conformance Requirements for the 'job-save-disposition" attribute**

2160 In order to claim conformance for the OPTIONAL "job-save-dispositions" Job Template
2161 attribute, clients:

- 2162 1. MUST support the "job-save-disposition" (collection) attribute according to the
2163 description in section 7.9, including the member attributes as REQUIRED by Table
2164 7.
- 2165 2. MUST support the "save-info" (collection) member attribute according to the "job-
2166 save-disposition" attribute description in section 7.9, including the member attributes
2167 as REQUIRED by Table 8.
- 2168 3. MUST support the Reprocess-Job and Resubmit-Job operations for printing saved
2169 jobs according to section 4.3 above.

2170 **10.4.2 Printer Conformance Requirements for the 'job-save-disposition" attribute**

2171 In order to claim conformance for the OPTIONAL "job-save-dispositions" Job Template
2172 attribute, Printers:

- 2173 1. MUST support the "job-save-disposition" (collection) Job Template attribute
2174 according to the description in section 7.9, including the member attributes as
2175 REQUIRED by Table 7 and the "job-save-disposition- default" attribute and the "job-
2176 save-disposition-supported" attribute.
- 2177 2. MUST support all of the "save-disposition" member attribute values defined in the
2178 "job-save-disposition" description section 7.9.
- 2179 3. MUST support the "save-info" (collection) member attribute according to the "job-
2180 save-disposition" attribute description in section 7.9, including the member attributes

- 2181 as REQUIRED by Table 8 and the “save- location-supported”, “save-name-
2182 supported”, “save-document-format-supported”, and “save-info- supported” Printer
2183 attributes.
- 2184 4. SHOULD support the ‘ftp:’, and ‘http:’ schemes and MAY support ‘file:’ scheme for
2185 use in the “save- location” member attribute as defined in the "job-save-disposition"
2186 attribute description in section 7.9.
- 2187 5. MUST support at least one “save-document-format” (mimeMediaType) attribute
2188 value, as defined in the "job-save-disposition" attribute description in section 7.9, for
2189 use in the “save-document-format” member attribute.
- 2190 6. SHOULD support a superset of the values of the Printer’s “save-document-format-
2191 supported” attribute (section 7.9.1.2.3.3.2) as the values of the Printer’s “document-
2192 format-supported” attribute [STD92].
- 2193 7. MUST support the "job-save-printer-make-and-model" Job Description attribute (see
2194 section 9.1).
- 2195 8. MUST support the "which-jobs-supported" Printer Description attribute (see section
2196 10.9) and the 'saved' keyword values (see section 11.2).
- 2197 9. MUST support the ‘job-saving’, ‘job-saved-successfully’, ‘job-saved-with-warnings’,
2198 and ‘job-saved-with- errors’ values of the “job-state-reasons” Job Description attribute
2199 as defined in the "job-state-reasons" attribute description in section 11.3.

2200 **10.4.3 Job Save Format Specification Conformance Requirements**

2201 Documents that define a Job Save format MUST contain the following information:

- 2202 1. MUST specify the mimeMediaType value that identifies the Job Save Format, e.g.,
2203 'application/X-single- page-tiff'.
- 2204 2. MUST define the representation for PDL data.
- 2205 3. MUST specify the formats of the document content and how the Job Save Format file
2206 references the document content, e.g., using Relative URI value (see [RFC2396]) to
2207 reference the document content in the “document-uri” operation attribute.
- 2208 4. MUST define whether or not Printers with differing values of their “printer-make-and-
2209 model” Printer attributes are expected to print saved jobs with the same appearance,
2210 i.e., whether or not a Printer MUST omit the “job-printer-make-and-model” Job
2211 Description attribute when saving the job in the defined format (see the "job-printer-
2212 make-and-model" attribute description in section 9.1).

2213 **10.5 Conformance Requirements for the REQUIRED "proof-print" Job**
2214 **Template attribute**

2215 Conforming Printers and clients MUST support the REQUIRED "proof-print" Job Template
2216 attribute.

2217 **10.5.1 Client Conformance Requirements for the 'proof-print' attribute**

2218 Conforming clients:

2219 1. MUST support the "proof-print" (collection) attribute according to the description in
2220 section 7.11, including the member attributes as REQUIRED by Table 12.

2221 2. MUST support the Reprocess-Job and Resubmit-Job operations for printing saved
2222 jobs according to section 4.4 above.

2223 **10.5.2 Printer Conformance Requirements for the 'proof-print' attribute**

2224 Conforming Printers:

2225 1. MUST support the "proof-print" (collection) Job Template attribute according to the
2226 description in section 7.11, including the member attributes as REQUIRED by Table
2227 12 and the "proof-print-default" attribute and the "proof-print-supported" attribute.

2228 2. MUST support the "which-jobs-supported" Printer Description attribute (see section
2229 10.9) and the 'saved' keyword values (see section 11.2).

2230 **11. Internationalization Considerations**

2231 For interoperability and basic support for multiple languages, conforming implementations
2232 MUST support:

2233 1. The Universal Character Set (UCS) Transformation Format -- 8 bit (UTF-8) [STD63]
2234 encoding of Unicode [UNICODE] [ISO10646]; and

2235 2. The Unicode Format for Network Interchange [RFC5198] which requires transmission
2236 of well-formed UTF-8 strings and recommends transmission of normalized UTF-8
2237 strings in Normalization Form C (NFC) [UAX15].

2238 Unicode NFC is defined as the result of performing Canonical Decomposition (into base
2239 characters and combining marks) followed by Canonical Composition (into canonical
2240 composed characters wherever Unicode has assigned them).

2241 WARNING – Performing normalization on UTF-8 strings received from Clients and
2242 subsequently storing the results (e.g., in Job objects) could cause false negatives in Client
2243 searches and failed access (e.g., to Printers with percent-encoded UTF-8 URIs now
2244 'hidden').

2245 Implementations of this specification SHOULD conform to the following standards on
2246 processing of human-readable Unicode text strings, see:

2247 Unicode Bidirectional Algorithm [UAX9] – left-to-right, right-to-left, and vertical

2248 Unicode Line Breaking Algorithm [UAX14] – character classes and wrapping

2249 Unicode Normalization Forms [UAX15] – especially NFC for [RFC5198]

2250 Unicode Text Segmentation [UAX29] – grapheme clusters, words, sentences

2251 Unicode Identifier and Pattern Syntax [UAX31] – identifier use and normalization

2252 Unicode Collation Algorithm [UTS10] – sorting

2253 Unicode Locale Data Markup Language [UTS35] – locale databases

2254 Implementations of this specification are advised to also review the following informational
2255 documents on processing of human-readable Unicode text strings:

2256 Unicode Character Encoding Model [UTR17] – multi-layer character model

2257 Unicode Character Property Model [UTR23] – character properties

2258 Unicode Conformance Model [UTR33] – Unicode conformance basis

2259 **12. Security Considerations**

2260 The IPP extensions defined in this document require the same security considerations as
2261 defined in the Internet Printing Protocol/1.1 [STD92].

2262 Implementations of this specification SHOULD conform to the following standard on
2263 processing of human-readable Unicode text strings, see:

2264 Unicode Security Mechanisms [UTS39] – detecting and avoiding security attacks

2265 Implementations of this specification are advised to also review the following informational
2266 document on processing of human-readable Unicode text strings:

2267 Unicode Security FAQ [UNISECFAQ] – common Unicode security issues

2268 **13. IANA Considerations**

2269 **13.1 IPP Attribute and Keyword Value Registrations**

2270 This section contains the exact registration information for IANA to update according to the
 2271 procedures defined in [STD92].

2272 The registry entries will contain the following information:

2273 Job Template attributes:	Reference
2274 -----	-----
2275 feed-orientation (type2 keyword)	[PWG5100.11]
2276 font-name-requested (name(MAX))	[PWG5100.11]
2277 font-size-requested (integer (1:MAX))	[PWG5100.11]
2278 job-delay-output-until (type2 keyword name(MAX))	[PWG5100.11]
2279 job-delay-output-until-time (dateTime)	[PWG5100.11]
2280 job-hold-until-time (dateTime)	[PWG5100.11]
2281 job-phone-number (uri)	[PWG5100.11]
2282 job-recipient-name (name(MAX))	[PWG5100.11]
2283 job-save-disposition (collection)	[PWG5100.11]
2284 save-disposition (type2 keyword)	[PWG5100.11]
2285 save-info (1setOf collection)	[PWG5100.11]
2286 save-document-format (mimeMediaType)	[PWG5100.11]
2287 save-location (uri)	[PWG5100.11]
2288 save-name (name(MAX))	[PWG5100.11]
2289 pdl-init-file (1setOf collection)	[PWG5100.11]
2290 pdl-init-file-entry (name(MAX))	[PWG5100.11]
2291 pdl-init-file-location (uri)	[PWG5100.11]
2292 pdl-init-file-name (name(MAX))	[PWG5100.11]
2293 proof-print (collection)	[PWG5100.11]
2294 media (type2 keyword name(MAX))	[PWG5100.11]
2295 media-col (collection)	[PWG5100.11]
2296 proof-print-copies (integer (0:MAX))	[PWG5100.11]
2297 media-col (collection)	[PWG5100.11]
2298 media-grain (type2 keyword name(MAX))	[PWG5100.11]
2299 media-thickness (integer(1:MAX))	[PWG5100.11]
2300 media-tooth (type2 keyword name(MAX))	[PWG5100.11]
2301	
2302	
2303 Operation attributes:	Reference
2304 -----	-----
2305 job-ids (1setOf integer(1:MAX))	[PWG5100.11]
2306 job-password (octetString(255))	[PWG5100.11]
2307 job-password-encryption (type2 keyword name(MAX))	[PWG5100.11]
2308	
2309	
2310 Job Description attributes:	Reference
2311 -----	-----
2312 job-save-printer-make-and-model (text(127))	[PWG5100.11]
2313	
2314	
2315 Printer Description attributes:	Reference
2316 -----	-----
2317 feed-orientation-default (type2 keyword)	[PWG5100.11]
2318 feed-orientation-supported (1setOf (type2 keyword))	[PWG5100.11]
2319 font-name-requested-default (name(MAX))	[PWG5100.11]
2320 font-name-requested-supported (1setOf name(MAX))	[PWG5100.11]
2321 font-size-requested-default (integer (1:MAX))	[PWG5100.11]
2322 font-size-requested-supported (1setOf rangeOfInteger (1:MAX))	[PWG5100.11]

2323	job-creation-attributes-supported (1setOf type2 keyword)	[PWG5100.11]
2324	job-delay-output-until-default (type2 keyword name(MAX))	[PWG5100.11]
2325	job-delay-output-until-supported (1setOf (type2 keyword name(MAX)))	[PWG5100.11]
2326	job-delay-output-until-time-supported (rangeOfInteger(0:MAX))	[PWG5100.11]
2327	job-hold-until-time-supported (rangeOfInteger(0:MAX))	[PWG5100.11]
2328	job-ids-supported (boolean)	[PWG5100.11]
2329	job-password-encryption-supported (1setOf (type2 keyword name(MAX)))	[PWG5100.11]
2330	job-password-supported (integer(0:255))	[PWG5100.11]
2331	job-phone-number-default (uri)	[PWG5100.11]
2332	job-phone-number-supported (boolean)	[PWG5100.11]
2333	job-recipient-name-default (name(MAX))	[PWG5100.11]
2334	job-recipient-name-supported (boolean)	[PWG5100.11]
2335	job-spooling-supported (type2 keyword)	[PWG5100.11]
2336	max-save-info-supported (integer(1:MAX))	[PWG5100.11]
2337	media-col-database (1setOf collection)	[PWG5100.11]
2338	pdl-init-file-default (1setOf collection)	[PWG5100.11]
2339	pdl-init-file-entry-supported (1setOf name(MAX))	[PWG5100.11]
2340	pdl-init-file-location-supported (1setOf uri)	[PWG5100.11]
2341	pdl-init-file-name-subdirectory-supported (boolean)	[PWG5100.11]
2342	pdl-init-file-name-supported (1setOf name(MAX))	[PWG5100.11]
2343	pdl-init-file-supported (1setOf type2 keyword)	[PWG5100.11]
2344	printer-detailed-status-messages (1setOf text(MAX))	[PWG5100.11]
2345	proof-print-default (collection)	[PWG5100.11]
2346	proof-print-supported (1setOf type2 keyword)	[PWG5100.11]
2347	save-disposition-supported (1setOf (type2 keyword))	[PWG5100.11]
2348	save-document-format-default (mimeMediaType)	[PWG5100.11]
2349	save-document-format-supported (1setOf mimeMediaType)	[PWG5100.11]
2350	save-location-default (uri)	[PWG5100.11]
2351	save-location-supported (1setOf uri)	[PWG5100.11]
2352	save-name-subdirectory-supported (boolean)	[PWG5100.11]
2353	save-name-supported (boolean)	[PWG5100.11]
2354	which-jobs-supported (1setOf type2 keyword)	[PWG5100.11]

2355 13.2 Attribute Value Registrations

2356 The attributes defined in this specification will be published by IANA according to the
 2357 procedures in IPP/1.1 Model and Semantics [STD92] section 7.1 in the following file:

2358 <http://www.iana.org/assignments/ipp-registrations>

2359 The registry entries will contain the following information:

2360	Attribute (attribute syntax)	Reference
2361	Keyword Attribute Value	Reference
2362	-----	-----
2363	feed-orientation (type2 keyword)	[PWG5100.11]
2364	long-edge-first	[PWG5100.11]
2365	short-edge-first	[PWG5100.11]
2366		
2367	job-creation-attributes-supported (1setOf type2 keyword)	[PWG5100.11]
2368	<all Job template attributes supported at the Job level>	
2369	<all operation attributes supported at the Job level>	
2370		
2371	job-password-encryption (type2 keyword name(MAX))	[PWG5100.11]
2372	job-password-encryption-supported (1setOf (type2 keyword name(MAX)))	[PWG5100.11]
2373	md2	[PWG5100.11]
2374	md4	[PWG5100.11]
2375	md5	[PWG5100.11]
2376	none	[PWG5100.11]

2377	sha	[PWG5100.11]
2378		
2379	job-save-disposition-supported (1setOf type2 keyword)	[PWG5100.11]
2380	save-disposition	[PWG5100.11]
2381	save-info	[PWG5100.11]
2382		
2383	job-spooling-supported (type2 keyword)	[PWG5100.11]
2384	automatic	[PWG5100.11]
2385	spool	[PWG5100.11]
2386	stream	[PWG5100.11]
2387		
2388	job-state-reasons (type2 keyword):	[PWG5100.11]
2389	job-delay-output-until-specified	[PWG5100.11]
