

# Job Monitoring MIB, V0.8~~6~~5

(This cover page is *not* part of the Internet-Draft)

From: Tom Hastings

Date: ~~09/1908/08/97~~

Version: 0.8~~6~~5

File: ftp://ftp.pwg.org/pub/jmp/mibs/jmp-mib.doc .pdf jmp-mibr.doc .pdf .pdr

Status: ~~Ninth~~<sup>Eighth</sup> draft MIB that incorporates the agreements reached on the DL on issues in V0.85 which was released after the 8/8 meeting and the agreements reached at the JMP meeting on 9/19~~resolutions of issues 110 to 120 from the 8/8 JMP meeting. In addition to the changes listed in Ron's list, the JMP agreed to remove the finishing enums that IPP removed (because of a lack of a coordinate system specification for stapling), add private enum range for attributes to agree with IPP.~~ See the change history in the separate file: changes.doc .pdf.

We agreed that the MIB specification is finished except for any editorial comments that people may have. See the separate issues.doc and .pdf file.

I've also produced a variation on this document which has all variable font (**jmp-mib.doc .pdf**) without revision marks. This is the version that the JMP should use to make comments. It has line numbers.

The MIB has been greatly simplified so that now there are only 18 objects in the MIB.

There are 65 attributes.

**Job Monitoring MIB - V0.865**

**<draft-ietf-printmib-job-monitor-065.txt>**

**Expires Mar 19~~Feb 8~~, 1997**

35

**36 Status of this Memo**

37 This document is an Internet-Draft. Internet-Drafts are working documents of the  
38 Internet Engineering Task Force (IETF), its areas, and its working groups. Note  
39 that other groups may also distribute working documents as Internet-Drafts.

40 Internet-Drafts are draft documents valid for a maximum of six months and may be  
41 updated, replaced, or obsoleted by other documents at any time. It is  
42 inappropriate to use Internet-Drafts as reference material or to cite them other than  
43 as "work in progress."

44 To learn the current status of any Internet-Draft, please check the "Iid-  
45 abstracts.txt" listing contained in the Internet-Drafts Shadow Directories on  
46 ftp.is.co.za (Africa), nic.nordu.net (Europe), munnari.oz.au (Pacific Rim),  
47 ds.internic.net (US East Coast), or ftp.isi.edu (US West Coast).

**48 Abstract**

49 This Internet-Draft specifies a small set of read-only SNMP MIB objects for (1)  
50 monitoring the status and progress of print jobs (2) obtaining resource  
51 requirements before a job is processed, (3) monitoring resource consumption while  
52 a job is being processed and (4) collecting resource accounting data after the  
53 completion of a job. This MIB is intended to be implemented (1) in a printer or  
54 (2) in a server that supports one or more printers. Use of the object set is not  
55 limited to printing. However, support for services other than printing is outside  
56 the scope of this Job Monitoring MIB. Future extensions to this MIB may include,  
57 but are not limited to, fax machines and scanners.

## Job Monitoring MIB

### 237 1. Introduction

238 The Job Monitoring MIB is intended to be implemented by an agent within a printer or the  
239 first server closest to the printer, where the printer is either directly connected to the  
240 server only or the printer does not contain the job monitoring MIB agent. It is  
241 recommended that implementations place the SNMP agent as close as possible to the  
242 processing of the print job. This MIB applies to printers with and without spooling  
243 capabilities. This MIB is designed to be compatible with most current commonly-used job  
244 submission protocols. In most environments that support high function job submission/job  
245 control protocols, like ISO DPA[iso-dpa], those protocols would be used to monitor and  
246 manage print jobs rather than using the Job Monitoring MIB.

247 The Job Monitoring MIB consists of a General Group, a Job Submission ID Group, a Job  
248 Group, and an Attribute Group. Each group is a table. All accessible objects are read-  
249 only. The General Group contains general information that applies to all jobs in a job set.  
250 The Job Submission ID table maps the job submission ID that the client uses to identify a  
251 job to the **jmJobIndex** that the Job Monitoring Agent uses to identify jobs in the Job and  
252 Attribute tables. The Job table contains the MANDATORY integer job state and status  
253 objects. The Attribute table consists of multiple entries per job that specify (1) job and  
254 document identification and parameters, (2) requested resources, and (3) consumed  
255 resources during and after job processing/printing. A larger number of job attributes are  
256 defined as textual conventions that an agent SHALL return if the server or device  
257 implements the functionality so represented and the agent has access to the information.

#### 258 1.1 Types of Information in the MIB

259 The job MIB is intended to provide the following information for the indicated Role  
260 Models in the Printer MIB[print-mib] (Appendix D - Roles of Users).

261 User:

262 Provide the ability to identify the least busy printer. The user will be able to  
263 determine the number and size of jobs waiting for each printer. No attempt is  
264 made to actually predict the length of time that jobs will take.

265 Provide the ability to identify the current status of the user's job (user queries).

266 Provide a timely indication that the job has completed and where it can be found.

267 Provide error and diagnostic information for jobs that did not successfully  
268 complete.

269 Operator:

- 270 Provide a presentation of the state of all the jobs in the print system.
- 271 Provide the ability to identify the user that submitted the print job.
- 272 Provide the ability to identify the resources required by each job.
- 273 Provide the ability to define which physical printers are candidates for the print
- 274 job.
- 275 Provide some idea of how long each job will take. However, exact estimates of
- 276 time to process a job is not being attempted. Instead, objects are included that
- 277 allow the operator to be able to make gross estimates.

278 Capacity Planner:

- 279 Provide the ability to determine printer utilization as a function of time.
- 280 Provide the ability to determine how long jobs wait before starting to print.

281 Accountant:

- 282 Provide information to allow the creation of a record of resources consumed and
- 283 printer usage data for charging users or groups for resources consumed.
- 284 Provide information to allow the prediction of consumable usage and resource
- 285 need.

286 The MIB supports printers that can contain more than one job at a time, but still be usable  
287 for low end printers that only contain a single job at a time. In particular, the MIB  
288 supports the needs of Windows and other PC environments for managing low-end direct-  
289 connect (serial or parallel) and networked devices without unnecessary overhead or  
290 complexity, while also providing for higher end systems and devices.

291 **1.2 Types of Job Monitoring Applications**

292 The Job Monitoring MIB is designed for the following types of monitoring applications:

- 293 1. Monitor a single job starting when the job is submitted and ending a defined
- 294 period after the job completes. The Job Submission ID table provides the map
- 295 to find the specific job to be monitored.
- 296 2. Monitor all 'active' jobs in a queue, which this specification generalizes to a
- 297 "job set". End users may use such a program when selecting a least busy
- 298 printer, so the MIB is designed for such a program to start up quickly and find
- 299 the information needed quickly without having to read all (completed) jobs in
- 300 order to find the active jobs. System operators may also use such a program,
- 301 in which case it would be running for a long period of time and may also be
- 302 interested in the jobs that have completed. Finally such a program may be
- 303 used to provide an enhanced console and logging capability.

304 3. Collect resource usage for accounting or system utilization purposes that copy  
305 the completed job statistics to an accounting system. It is recognized that  
306 depending on accounting programs to copy MIB data during the job-retention  
307 period is somewhat unreliable, since the accounting program may not be  
308 running (or may have crashed). Such a program is also expected to keep a  
309 shadow copy of the entire Job **Attribute** table including **completed**,  
310 **canceled, and aborted** jobs which the program updates on each polling cycle.  
311 Such a program polls at the rate of the persistence of the **Attribute** table.  
312 The design is not optimized to help such an application determine which jobs  
313 are **completed, canceled, or aborted**. Instead, the application SHALL query  
314 each job that the application's shadow copy shows was not **complete**,  
315 **canceled, or aborted** at the previous poll cycle to see if it is now **complete** or  
316 **canceled**, plus any new jobs that have been submitted.

317 The MIB provides a set of objects that represent a compatible subset of job and document  
318 attributes of the ISO DPA standard[iso-dpa] and the Internet Printing Protocol (IPP)[ipp-  
319 model], so that coherence is maintained between these two protocols and the information  
320 presented to end users and system operators by monitoring applications. However, the  
321 job monitoring MIB is intended to be used with printers that implement other job  
322 submitting and management protocols, such as IEEE 1284.1 (TIPSI)[tipsi], as well as  
323 with ones that do implement ISO DPA. Thus the job monitoring MIB does not require  
324 implementation of either the ISO DPA or IPP protocols.

325 The MIB is designed so that an additional MIB(s) can be specified in the future for  
326 monitoring multi-function (scan, FAX, copy) jobs as an augmentation to this MIB.

## 327 2. Terminology and Job Model

328 This section defines the terms that are used in this specification and the general model for  
329 jobs.

330 NOTE - Existing systems use conflicting terms, so these terms are drawn from the ISO  
331 10175 Document Printing Application (DPA) standard[iso-dpa]. For example,  
332 PostScript systems use the term *session* for what is called a *job* in this specification and  
333 the term *job* to mean what is called a *document* in this specification. ~~PJL systems use  
334 the term *job* to mean what is called a *job* in this specification. PJL also supports  
335 multiple *documents* per job, but does not support specifying per-document attributes  
336 independently for each document.~~

337 Job: Aa unit of work whose results are expected together without interjection of  
338 unrelated results. A job contains one or more *documents*.

339 Job Set: Aa group of jobs that are queued and scheduled together according to a specified  
340 scheduling algorithm for a specified device or set of devices. For implementations that  
341 embed the SNMP agent in the device, the MIB job set normally represents *all* the jobs  
342 known to the device, so that the implementation only implements a single job set. If the

343 SNMP agent is implemented in a server that controls one or more devices, each MIB job  
344 set represents a job queue for (1) a specific device or (2) set of devices, if the server uses a  
345 single queue to load balance between several devices. Each job set is disjoint; no job  
346 SHALL be represented in more than one MIB job set.

347 Document: Aa sub-section within a job that contains print data and *document instructions*  
348 that apply to just the document.

349 Client: Tthe network entity that *end users* use to submit jobs to *spoolers, servers, or*  
350 *printers* and other *devices*, depending on the configuration, using any job submission  
351 protocol over a serial or parallel port to a directly-connected device or over the network  
352 to a networked-connected device.

353 Server: Aa network entity that accepts jobs from clients and in turn submits the jobs to  
354 *printers* and other *devices* that may be directly connected to the server via a serial or  
355 parallel port or may be on the network. A server MAY be a printer *supervisor* control  
356 program, or a print *spooler*.

357 Device: Aa hardware entity that (1) interfaces to humans ~~in human perceptible means,~~  
358 such as a device that produces marks on paper, or scans marks on paper to produce an  
359 electronic representations, (2) accesses digital media, such as or writes CD-ROMs, or (32)  
360 interfaces electronically to another device, such as sends FAX data to another FAX  
361 device.

362 Printer: Aa device that puts marks on media.

363 Supervisor: Aa server that contains a control program that controls a printer or other  
364 device. A supervisor is a client to the printer or other device.

365 Spooler: Aa server that accepts jobs, spools the data, and decides when and on which  
366 printer to print the job. A spooler is a client to a printer or a printer supervisor, depending  
367 on implementation.

368 Spooling: Tthe act of a *device* or *server* of (1) accepting jobs and (2) writing the job's  
369 attributes and document data on to secondary storage.

370 Queuing: Tthe act of a *device* or *server* of ordering (queuing) the jobs for the purposes of  
371 scheduling the jobs to be processed.

372 Monitor or Job Monitoring Application: Tthe SNMP management application that End  
373 Users, and System Operators use to monitor jobs using SNMP. A monitor MAY be either  
374 a separate application or MAY be part of the client that also submits jobs.

375 Accounting Application: Tthe SNMP management application that copies job information  
376 to some more permanent medium so that another application can perform accounting on  
377 the data for Accountants, Asset Managers, and Capacity Planners use.

- 378 Agent: **T**he network entity that accepts SNMP requests from a *monitor* or *accounting*  
379 *application* and provides access to the instrumentation for managing jobs modeled by the  
380 management objects defined in the Job Monitoring MIB module for a *server* or a *device*.
- 381 Proxy: **Aa**n agent that acts as a concentrator for one or more other agents by accepting  
382 SNMP operations on the behalf of one or more other agents, forwarding them on to those  
383 other agents, gathering responses from those other agents and returning them to the  
384 original requesting monitor.
- 385 User: **Aa** person that uses a client or a monitor.
- 386 End User: **Aa** user that uses a client to submit a print job.
- 387 System Operator: **Aa** user that uses a monitor to monitor the system and carries out tasks  
388 to keep the system running.
- 389 System Administrator: **Aa** user that specifies policy for the system.
- 390 Job Instruction: **Aa**n instruction specifying how, when, or where the job is to be  
391 processed. Job instructions MAY be passed in the job submission protocol or MAY be  
392 embedded in the document data or a combination depending on the job submission  
393 protocol and implementation.
- 394 Document Instruction: **Aa**n instruction specifying how to process the document.  
395 Document instructions MAY be passed in the job submission protocol separate from the  
396 actual document data, or MAY be embedded in the document data or a combination,  
397 depending on the job submission protocol and implementation.
- 398 SNMP Information Object: **Aa** name, value-pair that specifies an action, a status, or a  
399 condition in an SNMP MIB. Objects are identified in SNMP by an OBJECT  
400 IDENTIFIER.
- 401 Attribute: **Aa** name, value-pair that specifies a job or document instruction, a status, or a  
402 condition of a job or a document that has been submitted to a server or device. A  
403 particular attribute NEED NOT be present in each job instance. In other words, attributes  
404 are present in a job instance only when there is a need to express the value, either because  
405 (1) the client supplied a value in the job submission protocol, (2) the document data  
406 contained an embedded attribute, or (3) the server or device supplied a default value. An  
407 agent SHALL represent an attribute as an entry (row) in the Attribute table in this MIB in  
408 which entries are present only when necessary. Attributes are identified in this MIB by an  
409 enum.
- 410 Job Monitoring (using SNMP): **T**he activity of a management application of accessing  
411 the MIB and (1) identifying jobs in the job tables being processed by the server, printer or  
412 other devices, and (2) displaying information to the user about the processing of the job.

413 Job Accounting: **T**he activity of a management application of accessing the MIB and  
 414 recording what happens to the job during and after the processing of the job.

415 **2.1 System Configurations for the Job Monitoring MIB**

416 This section enumerates the three configurations in which the Job Monitoring MIB is  
 417 intended to be used. To simplify the pictures, the *devices* are shown as *printers*. See  
 418 section 1.1 entitled "Types of Information in the MIB".

419 The diagram in the Printer MIB[print-mib] entitled: "One Printer's View of the Network"  
 420 is assumed for this MIB as well. Please refer to that diagram to aid in understanding the  
 421 following system configurations.

422 **2.1.1 Configuration 1 - client-printer**

423 In the **client-printer** configuration 1, the **client(s)** submit jobs directly to the **printer**,  
 424 either by some direct connect, or by network connection.

425 The job submitting **client** and/or **monitoring application** monitor jobs by communicating  
 426 directly with an agent that is part of the **printer**. The agent in the **printer** SHALL keep  
 427 the job in the Job Monitoring MIB as long as the job is in the **printer**, plus a defined time  
 428 period after the job enters the **completed** state in which accounting programs can copy  
 429 out the accounting data from the Job Monitoring MIB.

430

445 **Figure 2-1 - Configuration 1 - client-printer - agent in the printer**

446 The Job Monitoring MIB is designed to support the following relationships (not shown in  
 447 Figure 2-1):

- 448 1. Multiple **clients** MAY submit jobs to a **printer**.
- 449 2. Multiple **clients** MAY monitor a **printer**.

- 450           3. Multiple **monitors** MAY monitor a **printer**.  
451           4. A **client** MAY submit jobs to multiple **printers**.  
452           5. A **monitor** MAY monitor multiple **printers**.

### 453   **2.1.2 Configuration 2 - client-server-printer - agent in the server**

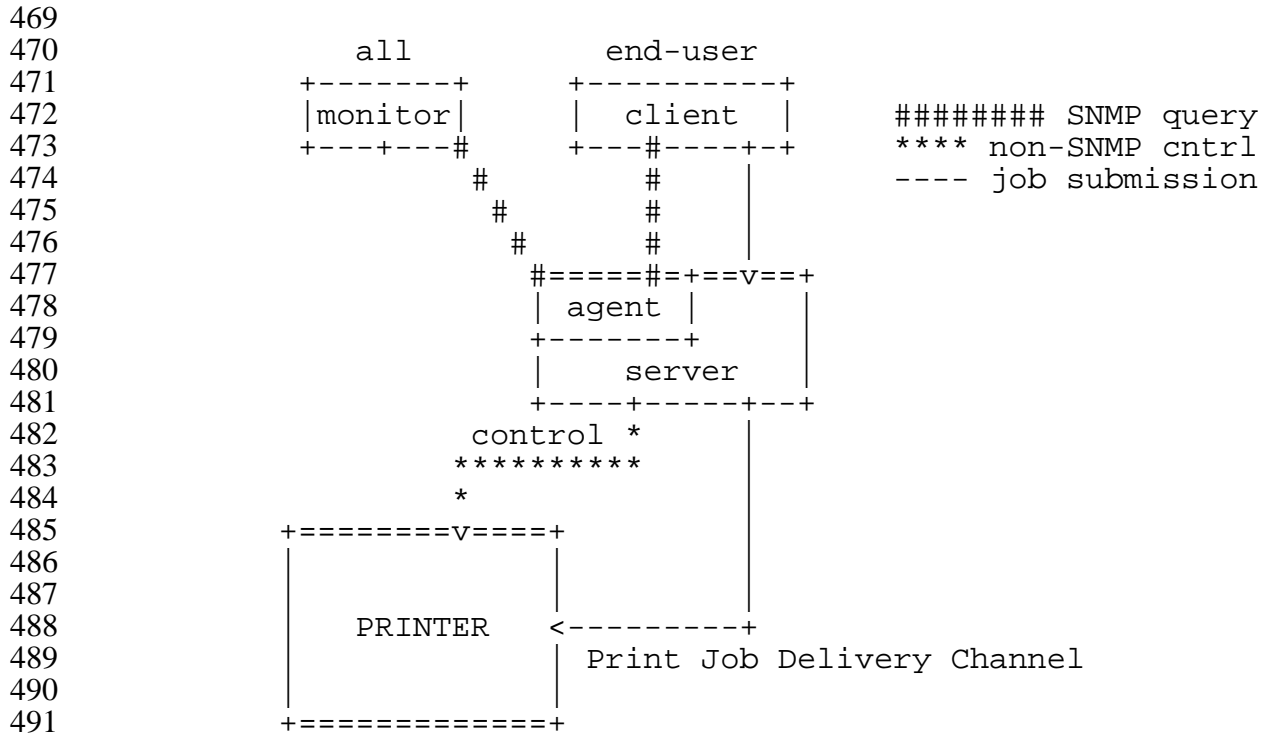

454   In the **client-server-printer** configuration 2, the **client(s)** submit jobs to an intermediate  
455   **server** by some network connection, *not* directly to the **printer**. While configuration 2 is  
456   included, the design center for this MIB is configurations 1 and 3.

457   The job submitting **client** and/or **monitoring application** monitor jobs by communicating  
458   directly with:

459           A Job Monitoring MIB agent that is part of the **server** (or a front for the server)

460   There is no SNMP Job Monitoring MIB agent in the **printer** in configuration 2, at least  
461   that the client or monitor are aware. In this configuration, the agent **SHALL** return the  
462   current values of the objects in the Job Monitoring MIB both for jobs the server keeps and  
463   jobs that the server has submitted to the **printer**. The Job Monitoring MIB agent **SHALL**  
464   obtain the required information from the **printer** by a method that is beyond the scope of  
465   this document. The agent in the **server** **SHALL** keep the job in the Job Monitoring MIB  
466   in the server as long as the job is in the **printer**, plus a defined time period after the job  
467   enters the **completed** state in which accounting programs can copy out the accounting  
468   data from the Job Monitoring MIB.

492 **Figure 2-2 - Configuration 2 - client-server-printer - agent in the server**

493 The Job Monitoring MIB is designed to support the following relationships (not shown in  
494 Figure 2-2):

- 495 1. Multiple **clients** MAY submit jobs to a **server**.
- 496 2. Multiple **clients** MAY monitor a **server**.
- 497 3. Multiple **monitors** MAY monitor a **server**.
- 498 4. A **client** MAY submit jobs to multiple **servers**.
- 499 5. A **monitor** MAY monitor multiple **servers**.
- 500 6. Multiple **servers** MAY submit jobs to a **printer**.
- 501 7. Multiple **servers** MAY control a **printer**.

502 **2.1.3 Configuration 3 - client-server-printer - client monitors printer agent and**  
503 **server**

504 In the **client-server-printer** configuration 3, the **client(s)** submit jobs to an intermediate  
505 **server** by some network connection, *not* directly to the **printer**. That server does *not*  
506 contain a Job Monitoring MIB agent.

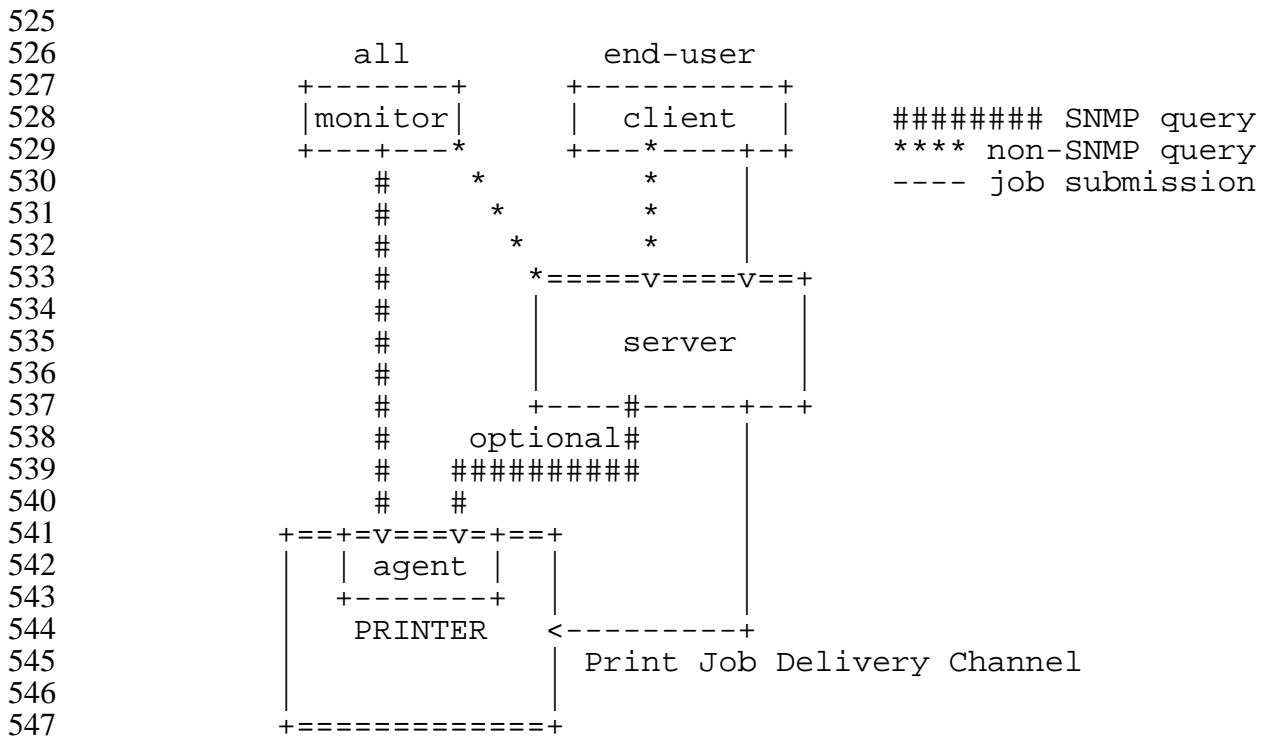

507 The job submitting **client** and/or **monitoring application** monitor jobs by communicating  
508 directly with:

- 509 1. The **server** using some undefined protocol to monitor jobs in the server (that  
510 does not contain the Job Monitoring MIB) AND

- 511           2. A Job Monitoring MIB agent that is part of the **printer** to monitor jobs after  
 512           the **server** passes the jobs to the **printer**. In such configurations, the **server**  
 513           deletes its copy of the job from the **server** after submitting the job to the  
 514           printer usually almost immediately (before the job does much processing, if  
 515           any).

516 In configuration 3, the agent (in the **printer**) SHALL keep the values of the objects in the  
 517 Job Monitoring MIB that the agent implements updated for a job that the server has  
 518 submitted to the printer. The agent SHALL obtain information about the jobs submitted  
 519 to the printer from the server (either in the job submission protocol, in the document data,  
 520 or by direct query of the server), in order to populate some of the objects the Job  
 521 Monitoring MIB in the printer. The agent in the printer SHALL keep the job in the Job  
 522 Monitoring MIB as long as the job is in the Printer, and longer in order to implement the  
 523 **completed** state in which monitoring programs can copy out the accounting data from the  
 524 Job Monitoring MIB.

548 **Figure 2-3 - Configuration 3 - client-server-printer - client monitors printer agent**  
 549 **and server**

550 The Job Monitoring MIB is designed to support the following relationships (not shown in  
 551 Figure 2-3):

- 552           1. Multiple **clients** MAY submit jobs to a **server**.  
 553           2. Multiple **clients** MAY monitor a **server**.  
 554           3. Multiple **monitors** MAY monitor a **server**.

- 555 4. A **client** MAY submit jobs to multiple **servers**.  
556 5. A **monitor** MAY monitor multiple **servers**.  
557 6. Multiple **servers** MAY submit jobs to a **printer**.  
558 7. Multiple **servers** MAY control a **printer**.

### 559 3. Managed Object Usage

560 This section describes the usage of the objects in the MIB.

#### 561 3.1 Conformance Considerations

562 In order to achieve interoperability between job monitoring applications and job  
563 monitoring agents, this specification includes the conformance requirements for both  
564 monitoring applications and agents.

##### 565 3.1.1 Conformance Terminology

566 This specification uses the verbs: "SHALL", "SHOULD", "MAY", and "NEED NOT" to  
567 specify conformance requirements according to RFC 2119 [req-words] as follows:

- 568 • "SHALL": indicates an action that the subject of the sentence must implement in  
569 order to claim conformance to this specification
- 570 • "MAY": indicates an action that the subject of the sentence does not have to  
571 implement in order to claim conformance to this specification, in other words that  
572 action is an implementation option
- 573 • "NEED NOT": indicates an action that the subject of the sentence does not have to  
574 implement in order to claim conformance to this specification. The verb "NEED  
575 NOT" is used instead of "may not", since "may not" sounds like a prohibition.
- 576 • "SHOULD": indicates an action that is recommended for the subject of the  
577 sentence to implement, but is not required, in order to claim conformance to this  
578 specification.

##### 579 3.1.2 Agent Conformance Requirements

580 A conforming agent:

- 581 1. SHALL implement *all* MANDATORY groups in this specification.
- 582 2. SHALL implement any attributes if (1) the server or device supports the  
583 functionality represented by the attribute and (2) the information is available to  
584 the agent.
- 585 3. SHOULD implement both forms of an attribute if it implements an attribute  
586 that permits a choice of INTEGER and OCTET STRING forms, since

587 implementing both forms may help management applications by giving them a  
588 choice of representations, since the representation are equivalent. See the  
589 **JmAttributeTypeTC** textual-convention.

590 NOTE - This MIB, like the Printer MIB, is written following the subset of SMIV2 that  
591 can be supported by SMIV1 and SNMPV1 implementations.

#### 592 3.1.2.1 MIB II System Group objects

593 The Job Monitoring MIB agent SHALL implement all objects in the System Group of  
594 MIB-II[mib-II], whether the Printer MIB[print-mib] is implemented or not.

#### 595 3.1.2.2 MIB II Interface Group objects

596 The Job Monitoring MIB agent SHALL implement all objects in the Interfaces Group of  
597 MIB-II[mib-II], whether the Printer MIB[print-mib] is implemented or not.

#### 598 3.1.2.3 Printer MIB objects

599 If the agent is providing access to a device that is a printer, the agent SHALL implement  
600 all of the MANDATORY objects in the Printer MIB[print-mib] and all the objects in other  
601 MIBs that conformance to the Printer MIB requires, such as the Host Resources MIB[hr-  
602 mib]. If the agent is providing access to a server that controls one or more direct-connect  
603 or networked printers, the agent NEED NOT implement the Printer MIB and NEED NOT  
604 implement the Host Resources MIB.

### 605 3.1.3 Job Monitoring Application Conformance Requirements

606 A conforming job monitoring application:

- 607 1. SHALL accept the full syntactic range for all objects in all MANDATORY  
608 groups and all MANDATORY attributes that are required to be implemented  
609 by an agent according to Section 3.1.2 and SHALL either present them to the  
610 user or ignore them.
- 611 2. SHALL accept the full syntactic range for *all* attributes, including enum and  
612 bit values specified in this specification and additional ones that may be  
613 registered with IANA and SHALL either present them to the user or ignore  
614 them. In particular, a conforming job monitoring application SHALL not  
615 malfunction when receiving any standard or registered enum or bit values.  
616 See Section 3.6 entitled "IANA Considerations".
- 617 3. SHALL NOT fail when operating with agents that materialize attributes *after*  
618 the job has been submitted, as opposed to when the job is submitted.
- 619 4. SHALL, if it supports a time attribute, accept either form of the time attribute,  
620 since agents are free to implement either time form.

### 621 3.2 The Job Tables and the Oldest Active and Newest Active Indexes

622 The **jmJobTable** and **jmAttributeTable** contain objects and attributes, respectively, for  
623 each job in a job set. These first two indexes are:

- 624 1. **jmGeneralJobSetIndex** - which job set
- 625 2. **jmJobIndex** - which job in the job set

626 In order for a monitoring application to quickly find that active jobs (jobs in the **pending**,  
627 **processing**, or **processingStopped** states), the MIB contains two indexes:

- 628 1. **jmGeneralOldestActiveJobIndex** - the index of the active job that has been  
629 in the tables the longest.
- 630 2. **jmGeneralNewestActiveJobIndex** - the index of the active job that has been  
631 most recently added to the tables.

632 The agent SHALL assign the next incremental value of **jmJobIndex** to the job, when a  
633 new job is accepted by the server or device to which the agent is providing access. If the  
634 incremented value of **jmJobIndex** would exceed the implementation-defined maximum  
635 value for **jmJobIndex**, the agent SHALL 'wrap' back to 1. An agent uses the resulting  
636 value of **jmJobIndex** for storing information in the **jmJobTable** and the  
637 **jmAttributeTable** about the job.

638 It is recommended that the largest value for **jmJobIndex** be much larger than the  
639 maximum number of jobs that the implementation can contain at a single time, so as to  
640 minimize the premature re-use of a **jmJobIndex** value for a newer job while clients retain  
641 the same 'stale' value for an older job.

642 It is recommended that agents that are providing access to servers/devices that already  
643 allocate job-identifiers for jobs as integers use the same integer value for the **jmJobIndex**.  
644 Then ~~the jobs will have the same job identifier value as the **jmJobIndex** value, so that~~  
645 ~~users viewing jobs by-~~management applications using this MIB and applications using  
646 other protocols will see the same job identifiers for the same jobs. Agents providing  
647 access to systems that contain jobs with a job identifier of **0** SHALL map the job identifier  
648 value **0** to a **jmJobIndex** value that is one higher than the highest job identifier value that  
649 any job can have on that system. Then only job 0 will have a different job-identifier value  
650 than the job's **jmJobIndex** value.

651 NOTE - If a server or device accepts jobs using multiple job submission protocols, it may  
652 be difficult for the agent to meet the recommendation to use the job-identifier values that  
653 the server or device assigns as the **jmJobIndex** value, unless the server/device assigns  
654 job-identifiers for each of its job submission protocols from the same job-identifier number  
655 space.

656 Each time a new job is accepted by the server or device that the agent is providing access  
657 to AND that job is to be 'active' (**pending**, **processing**, or **processingStopped**, but not  
658 **pendingHeld**), the agent SHALL copy the value of the job's **jmJobIndex** to the

659 **jmGeneralNewestActiveJobIndex** object. If the new job is to be 'inactive'  
660 (**pendingHeld** state), the agent SHALL not change the value of  
661 **jmGeneralNewestActiveJobIndex** object (though the agent SHALL assign the next  
662 incremental **jmJobIndex** value to the job).

663 When a job transitions from one of the 'active' job states (**pending**, **processing**,  
664 **processingStopped**) to one of the 'inactive' job states (**pendingHeld**, **completed**,  
665 **canceled**, or **aborted**), with a **jmJobIndex** value that matches the  
666 **jmGeneralOldestActiveJobIndex** object, the agent SHALL advance (or wrap) the value  
667 to the next oldest 'active' job, if any. See the **JmJobStateTC** textual-convention for a  
668 definition of the job states.

669 Whenever a job transitions from one of the 'inactive' job states to one of the 'active' job  
670 states (from **pendingHeld** to **pending** or **processing**), the agent SHALL update the value  
671 of either the **jmGeneralOldestActiveJobIndex** or the  
672 **jmGeneralNewestActiveJobIndex** objects, or both, if the job's **jmJobIndex** value is  
673 outside the range between **jmGeneralOldestActiveJobIndex** and  
674 **jmGeneralNewestActiveJobIndex**.

675 When all jobs become 'inactive', i.e., enter the **pendingHeld**, **completed**, **canceled**, or  
676 **aborted** states, the agent SHALL set the value of both the  
677 **jmGeneralOldestActiveJobIndex** and **jmGeneralNewestActiveJobIndex** objects to **0**.

678 NOTE - Applications that wish to efficiently access all of the active jobs MAY use  
679 **jmGeneralOldestActiveJobIndex** value to start with the oldest active job and continue  
680 until they reach the index value equal to **jmGeneralNewestActiveJobIndex**, skipping  
681 over any **pendingHeld**, **completed**, **canceled**, or **aborted** jobs that might intervene.

682 If an application detects that the **jmGeneralNewestActiveJobIndex** is smaller than  
683 **jmGeneralOldestActiveJobIndex**, the job index has wrapped. In this case, the  
684 application SHALL reset the index to **1** when the end of the table is reached and continue  
685 the GetNext operations to find the rest of the active jobs.

686 NOTE - Applications detect the end of the **jmAttributeTable** table when the OID  
687 returned by the GetNext operation is an OID in a different MIB. There is no object in this  
688 MIB that specifies the maximum value for the **jmJobIndex** supported by the  
689 implementation.

690 When the server or device is power-cycled, the agent SHALL remember the next  
691 **jmJobIndex** value to be assigned, so that new jobs are not assigned the same  
692 **jmJobIndex** as recent jobs before the power cycle.

### 693 3.3 The Attribute Mechanism

694 Attributes are similar to information objects, except that attributes are identified by an  
695 enum, instead of an OID, so that attributes may be registered without requiring a new  
696 MIB. Also an implementation that does not have the functionality represented by the  
697 attribute can omit the attribute entirely, rather than having to return a distinguished value.  
698 The agent is free to materialize an attribute in the **jmAttributeTable** as soon as the agent  
699 is aware of the value of the attribute.

700 The agent materializes job attributes in a four-indexed **jmAttributeTable**:

- 701 1. jmGeneralJobSetIndex - which job set
- 702 2. jmJobIndex - which job in the job set
- 703 3. jmAttributeTypeIndex - which attribute
- 704 4. jmAttributeInstanceIndex - which attribute instance for those attributes that  
705 can have multiple values per job.

706 Some attributes represent information about a job, such as a file-name, a document-name,  
707 a submission-time or a completion time. Other attributes represent resources required,  
708 e.g., a medium or a colorant, etc. to process the job before the job starts processing OR to  
709 indicate the amount of the resource consumed during and after processing, e.g., pages  
710 completed or impressions completed. If both a required and a consumed value of a  
711 resource is needed, this specification assigns two separate attribute enums in the textual  
712 convention.

713 NOTE - The table of contents lists all the attributes in order. This order is the order of  
714 enum assignments which is the order that the SNMP GetNext operation returns attributes.  
715 Most attributes apply to all three configurations covered by this MIB specification (see  
716 section 2.1 entitled "System Configurations for the Job Monitoring MIB"). Those  
717 attributes that apply to a particular configuration are indicated as '**Configuration n:**' and  
718 SHALL NOT be used with other configurations.

#### 719 3.3.1 Conformance of Attribute Implementation

720 An agent SHALL implement any attribute if (1) the server or device supports the  
721 functionality represented by the attribute and (2) the information is available to the agent.  
722 The agent MAY create the attribute row in the **jmAttributeTable** when the information is  
723 available or MAY create the row earlier with the designated 'unknown' value appropriate  
724 for that attribute. See next section.

725 If the server or device does not implement or does not provide access to the information  
726 about an attribute, the agent SHOULD NOT create the corresponding row in the  
727 **jmAttributeTable**.

### 728 3.3.2 Useful, 'Unknown', and 'Other' Values for Objects and Attributes

729 Some attributes have a 'useful' Integer32 value, some have a 'useful' OCTET STRING  
730 value, some MAY have either or both depending on implementation, and some MUST  
731 have both. See the **JmAttributeTypeTC** textual convention for the specification of each  
732 attribute.

733 SNMP requires that if an object cannot be implemented because its values cannot be  
734 accessed, then a compliant agent SHALL return an SNMP error in SNMPv1 or an  
735 exception value in SNMPv2. However, this MIB has been designed so that 'all' objects  
736 can and SHALL be implemented by an agent, so that neither the SNMPv1 error nor the  
737 SNMPv2 exception value SHALL be generated by the agent. This MIB has also been  
738 designed so that when an agent materializes an attribute, the agent SHALL materialize a  
739 row consisting of both the **jmAttributeValueAsInteger** and **jmAttributeValueAsOctets**  
740 objects.

741 In general, values for objects and attributes have been chosen so that a management  
742 application will be able to determine whether a 'useful', 'unknown', or 'other' value is  
743 available. When a useful value is not available for an object that agent SHALL return a  
744 zero-length string for octet strings, the value '**unknown(2)**' for enums, a '**0**' value for an  
745 object that represents an index in another table, and a value '**-2**' for counting integers.

746 Since each attribute is represented by a row consisting of both the  
747 **jmAttributeValueAsInteger** and **jmAttributeValueAsOctets** MANDATORY objects,  
748 SNMP requires that the agent SHALL always create an attribute row with both objects  
749 specified. However, for most attributes the agent SHALL return a "useful" value for one  
750 of the objects and SHALL return the 'other' value for the other object. For integer only  
751 attributes, the agent SHALL always return a zero-length string value for the  
752 **jmAttributeValueAsOctets** object. For octet string only attributes, the agent SHALL  
753 always return a '**-1**' value for the **jmAttributeValueAsInteger** object.

### 754 3.3.3 Data Sub-types and Attribute Naming Conventions

755 Many attributes are sub-typed to give a more specific data type than **Integer32** or  
756 **OCTET STRING**. The data sub-type of each attribute is indicated on the first line(s) of  
757 the description. Some attributes have several different data sub-type representations.  
758 When an attribute has both an **Integer32** data sub-type and an **OCTET STRING** data  
759 sub-type, the attribute can be represented in a single row in the **jmAttributeTable**. In  
760 this case, the data sub-type name is not included as the last part of the name of the  
761 attribute, e.g., **documentFormat(38)** which is both an enum and/or a name. When the  
762 data sub-types cannot be represented by a single row in the **jmAttributeTable**, each such  
763 representation is considered a separate attribute and is assigned a separate name and enum  
764 value. For these attributes, the name of the data sub-type is the last part of the name of

765 the attribute: **Name**, **Index**, **DateAndTime**, **TimeStamp**, etc. For example,  
766 **documentFormatIndex(37)** is an index.

767 NOTE: The Table of Contents also lists the data sub-type and/or data sub-types of each  
768 attribute, using the textual-convention name when such is defined. The following  
769 abbreviations are used in the Table of Contents as shown:

'Int32(-2..)'	Integer32(-2..2147483647)
'Int32(0..)'	Integer32(0..2147483647)
'Int32(1..)'	Integer32(1..2147483647)
'Int32(m..n)'	For all other Integer ranges, the lower and upper bound of the range is indicated.
'UTF8String63'	JmUTF8StringTC(SIZE(0..63))
'JobString63'	JmJobStringTC(SIZE(0..63))
'Octets63'	OCTET STRING(SIZE(0..63))
'Octets(m..n)'	For all other OCTET STRING ranges, the exact range is indicated.

### 770 3.3.4 Single-Value (Row) Versus Multi-Value (MULTI-ROW) Attributes

771 Most attributes SHALL have only one row per job. However, a few attributes can have  
772 multiple values per job or even per document, where each value is a separate row in the  
773 **jmAttributeTable**. Unless indicated with '**MULTI-ROW:**' in the **JmAttributeTypeTC**  
774 description, an agent SHALL ensure that each attribute occurs only once in the  
775 **jmAttributeTable** for a job. Most of the '**MULTI-ROW**' attributes do not allow  
776 duplicate values, i.e., the agent SHALL ensure that each value occurs only once for a job.  
777 Only if the specification of the '**MULTI-ROW**' attribute also says "the values NEED NOT  
778 be unique" can the agent allow duplicate values to occur for the job.

779 NOTE - Duplicates are allowed for 'extensive' '**MULTI-ROW**' attributes, such as  
780 **fileName(34)** or **documentName(35)** which are specified to be 'per-document' attributes,  
781 but are *not* allowed for 'intensive' '**MULTI-ROW**' attributes, such as  
782 **mediumConsumed(171)** and **documentFormat(38)** which are specified to be 'per-job'  
783 attributes.

### 784 3.3.5 Requested Attributes

785 A number of attributes record requirements for the job. Such attribute names end with the  
786 word '**Requested**'. In the interests of brevity, the phrase 'requested' SHALL mean: (1)  
787 requested by the client (or intervening server) in the job submission protocol and MAY  
788 also mean (2) embedded in the submitted document data, and/or (3) defaulted by the  
789 recipient device or server with the same semantics as if the requester had supplied,  
790 depending on implementation.

### 791 3.3.6 Consumption Attributes

792 A number of attributes record consumption. Such attribute names end with the word  
793 'Completed' or 'Consumed'. If the job has not yet consumed what that resource is  
794 metering, the agent either: (1) SHALL return the value 0 or (2) SHALL *not* add this  
795 attribute to the **jmAttributeTable** until the consumption begins. In the interests of  
796 brevity, the semantics for 0 is specified once here and is *not* repeated for each consumptive  
797 attribute specification.

### 798 3.3.7 Index Value Attributes

799 A number of attributes are indexes in other tables. Such attribute names end with the  
800 word 'Index'. If the agent has not (yet) assigned an index value for a particular index  
801 attribute for a job, the agent SHALL either: (1) return the value 0 or (2) *not* add this  
802 attribute to the **jmAttributeTable** until the index value is assigned. In the interests of  
803 brevity, the semantics for 0 is specified once here and is *not* repeated for each index  
804 attribute specification.

## 805 3.4 Job Identification

806 There are a number of attributes that permit a user, operator or system administrator to  
807 identify jobs of interest, such as **jobURL**, **jobName**, **jobOriginatingHost**, etc. In  
808 addition, there is a **jmJobSubmissionID** object that is a text string table index. Being a  
809 table index allows a monitoring application to quickly locate and identify a particular job  
810 of interest that was submitted from a particular client by the user invoking the monitoring  
811 application. The Job Monitoring MIB needs to provide for identification of the job at both  
812 sides of the job submission process. The primary identification point is the client side.  
813 The **jmJobSubmissionID** allows the monitoring application to identify the job of interest  
814 from all the jobs currently "known" by the server or device. The value of  
815 **jmJobSubmissionID** can be assigned by either the client's local system or a downstream  
816 server or device. The point of assignment depends on the job submission protocol in use.

817 The server/device-side identifier, called the **jmJobIndex** object, SHALL be assigned by  
818 the SNMP Job Monitoring MIB agent when the server or device accepts the jobs from  
819 submitting clients. The **jmJobIndex** object allows the interested party to obtain all  
820 objects desired that relate to a particular job. See Section 3.2, entitled 'The Job Tables  
821 and the Oldest Active and Newest Active Indexes' for the specification of how the agent  
822 SHALL assign the **jmJobIndex** values.

823 ~~NOTE—For a number of job submission protocols the server/device assigns an integer job~~  
824 ~~identifier when accepting a job so that the submitting client can reference the job in~~  
825 ~~subsequent protocol operations (For example, see IPP [ipp]). For such implementations,~~

826 ~~it is recommended that the value of the job identifier and the value of jmJobIndex be the~~  
827 ~~same, so that~~

828 The MIB provides a mapping table that maps each **jmJobSubmissionID** value to the  
829 corresponding **jmJobIndex** value generated by the agent, so that an application can  
830 determine the correct value for the **jmJobIndex** value for the job of interest in a single  
831 Get operation, given the Job Submission ID. See the **jmJobIDGroup**.

832 The **jobName** attribute provides a name that the user supplies as a job attribute with the  
833 job. The **jobName** attribute is not necessarily unique, even for one user, let alone across  
834 users.

### 835 3.5 Internationalization Considerations

836 This section describes the internationalization considerations included in this MIB.

#### 837 3.5.1 Text generated by the server or device

838 There are a few objects and attributes ~~generated by the server or device~~ that SHALL beare  
839 represented using the Universal Multiple-Octet Coded Character Set (UCS) [ISO-10646]  
840 ~~encoded as an octet string using the UTF-8 [UTF-8] character encoding scheme.~~ The  
841 'JmUTF8StringTC' ~~textual convention is used to indicate UTF-8 text strings.~~ These  
842 objects and attributes are always supplied (if implemented) by the agent, not by the job  
843 submitting client:

- 844 1. jmGeneralJobSetName object
- 845 2. processingMessage(6) attribute
- 846 3. physicalDevice(32) (name value) attribute

847 The ~~character encoding scheme~~encoded character set for representing these objects and  
848 attributes SHALL be UTF-8 as recommended by RFC 2130 [RFC 2130] and the "IETF  
849 Policy on Character Sets and Language" [char-set policy]. The 'JmUTF8StringTC' textual  
850 convention is used to indicate UTF-8 text strings.

851 NOTE - For strings in 7-bit US-ASCII, there is no impact since the UTF-8 representation  
852 of 7-bit ASCII is identical to the US-ASCII [US-ASCII] encoding.

#### 853 3.5.2 Text generated by the job submitter

854 All of the objects and attributes represented by the '**JmJobStringTC**' textual-convention  
855 are either (1) supplied in the job submission protocol by the client that submits the job to  
856 the server or device or (2) are defaulted by the server or device if the job submitting client  
857 does not supply values. The agent SHALL represent these objects and attributes in the  
858 MIB either (1) in the coded character set as they were submitted or (2) MAY convert the  
859 coded character set to another coded character set or encoding scheme. In any case, the

860 resulting coded character set representation SHOULD be UTF-8 [UTF-8], but SHALL be  
861 one in which the code positions from 0 to 31 SHALL not be used, 32 to 127 SHALL be  
862 US-ASCII [US-ASCII], 127 SHALL be unused, and the remaining code positions 128 to  
863 255 SHALL represent single-byte or multi-byte graphic characters structured according to  
864 ISO 2022 [ISO 2022] or SHALL be unused.

865 The coded character set SHALL be one of the ones registered with IANA [IANA] and  
866 SHALL be identified by the **jobCodedCharSet** attribute in the **jmJobAttributeTable** for  
867 the job. If the agent does not know what coded character set was used by the job  
868 submitting client, the agent SHALL either (1) return the '**unknown(2)**' value for the  
869 **jobCodedCharSet** attribute or (2) not return the **jobCodedCharSet** attribute for the job.

870 Examples of coded character sets which meet this criteria for use as the value of the  
871 **jobCodedCharSet** job attribute are: US-ASCII [US-ASCII], ISO 8859-1 (Latin-1) [ISO  
872 8859-1], any ISO 8859-n, HP Roman8, IBM Code Page 850, Windows Default 8-bit set,  
873 UTF-8 [UTF-8], US-ASCII plus JIS X0208-1990 Japanese [JIS X0208], US-ASCII plus  
874 GB2312-1980 PRC Chinese [GB2312]. See the IANA registry of coded character sets  
875 [IANA charsets].

876 Examples of coded character sets which do not meet this criteria are: national 7-bit sets  
877 conforming to ISO 646 (except US-ASCII), EBCDIC, and ISO 10646 (Unicode) [ISO-  
878 10646]. In order to represent Unicode characters, the UTF-8 [UTF-8] encoding scheme  
879 SHALL be used which has been assigned the MIBenum value of '106' by IANA.

880 The **jobCodedCharSet** attribute uses the imported '**CodedCharSet**' textual-convention  
881 from the Printer MIB [printmib].

### 882 3.5.3 'DateAndTime' for representing the date and time

883 This MIB also contains objects that are represented using the **DateAndTime** textual  
884 convention from SMIV2 [SMIV2-TC]. The job management application SHALL display  
885 such objects in the locale of the user running the monitoring application.

### 886 3.6 IANA Considerations

887 During the development of this standard, the Printer Working Group (PWG) working with  
888 IANA [iana] will register additional enums while the standard is in the proposed and draft  
889 states according to the procedures described in this section. IANA will handle registration  
890 of additional enums after this standard is approved in cooperation with an IANA-  
891 appointed registration editor from the PWG according to the procedures described in this  
892 section:

### 893 3.6.1 IANA Registration of enums

894 This specification uses textual conventions to define enumerated values (enums) and bit  
895 values. Enumerations (enums) and bit values are sets of symbolic values defined for use  
896 with one or more objects or attributes. All enumeration sets and bit value sets are  
897 assigned a symbolic data type name (textual convention). As a convention the symbolic  
898 name ends in "TC" for textual convention. These enumerations are defined at the  
899 beginning of the MIB module specification.

900 This working group has defined several type of enumerations for use in the Job  
901 Monitoring MIB and the Printer MIB[print-mib]. These types differ in the method  
902 employed to control the addition of new enumerations. Throughout this document,  
903 references to "type n enum", where n can be 1, 2 or 3 can be found in the various tables.  
904 The definitions of these types of enumerations are:

#### 905 3.6.1.1 Type 1 enumerations

906 Type 1 enumeration: All the values are defined in the Job Monitoring MIB specification  
907 (RFC for the Job Monitoring MIB). Additional enumerated values require a new RFC.

908 There are no type 1 enums in the current draft.

#### 909 3.6.1.2 Type 2 enumerations

910 Type 2 enumeration: An initial set of values are defined in the Job Monitoring MIB  
911 specification. Additional enumerated values are registered after review by this working  
912 group or an editor appointed by IANA after this working group is no longer active.

913 The following type 2 enums are contained in the current draft :

- 914 1. JmUTF8StringTC
- 915 2. JmJobStringTC
- 916 3. JmTimeStampTC
- 917 4. JmFinishingTC [same enum values as IPP "finishing" attribute]
- 918 5. JmPrintQualityTC [same enum values as IPP "print-quality" attribute]
- 919 6. JmTonerEconomyTC
- 920 7. JmMediumTypeTC
- 921 8. JmJobSubmissionTypeTC
- 922 9. JmJobStateTC [same enum values as IPP "job-state" attribute]
- 923 10. JmAttributeTypeTC

924 For those textual conventions that have the same enum values as the indicated IPP Job  
925 attribute SHALL be simultaneously registered by IANA for use with IPP [ipp-model] and  
926 the Job Monitoring MIB.

927 3.6.1.3 Type 3 enumeration

928 Type 3 enumeration: An initial set of values are defined in the Job Monitoring MIB  
929 specification. Additional enumerated values are registered through IANA without  
930 working group review.

931 There are no type 3 enums in the current draft.

### 932 3.6.2 IANA Registration of type 2 bit values

933 This draft contains the following type 2 bit value textual-conventions:

- 934 1. JmJobServiceTypesTC
- 935 2. JmJobStateReasons1TC
- 936 3. JmJobStateReasons2TC
- 937 4. JmJobStateReasons3TC
- 938 5. JmJobStateReasons4TC

939 These textual-conventions are defined as bits in an Integer so that they can be used with  
940 SNMPv1 SMI. The **jobStateReasonsN** ( $N=1..4$ ) attributes are defined as bit values using  
941 the corresponding **JmJobStateReasonsNTC** textual-conventions.

942 The registration of **JmJobServiceTypesTC** and **JmJobStateReasonsNTC** bit values  
943 SHALL follow the procedures for a type 2 enum as specified in Section 3.6.1.2.

### 944 3.6.3 IANA Registration of Job Submission Id Formats

945 In addition to enums and bit values, this specification assigns a single ASCII digit or letter  
946 to various job submission ID formats. See the **JmJobSubmissionIDTypeTC** textual-  
947 convention and the object. The registration of **jmJobSubmissionID** format numbers  
948 SHALL follow the procedures for a type 2 enum as specified in Section 3.6.1.2.

### 949 3.6.4 IANA Registration of MIME types/sub-types for document-formats

950 The **documentFormat(38)** attribute has MIME type/sub-type values for indicating  
951 document formats which IANA registers as "media type" names. The values of the  
952 **documentFormat(38)** attribute are the same as the corresponding Internet Printing  
953 Protocol (IPP) "document-format" Job attribute values [ipp-model].

## 954 3.7 Security Considerations

### 955 3.7.1 Read-Write objects

956 All objects are read-only, greatly simplifying the security considerations. If another MIB  
957 augments this MIB, that MIB might accept SNMP Write operations to objects in that  
958 MIB whose effect is to modify the values of read-only objects in this MIB. However, that

959 MIB SHALL have to support the required access control in order to achieve security, not  
960 this MIB.

961 **3.7.2 Read-Only Objects In Other User's Jobs**

962 The security policy of some sites MAY be that unprivileged users can only get the objects  
963 from jobs that they submitted, plus a few minimal objects from other jobs, such as the  
964 **jmJobKOctetsRequested** and **jmJobKOctetsProcessed** objects, so that a user can tell  
965 how busy a printer is. Other sites MAY allow all unprivileged users to see all objects of  
966 all jobs. This MIB does not require, nor does it specify how, such restrictions would be  
967 implemented. A monitoring application SHOULD enforce the site security policy with  
968 respect to returning information to an unprivileged end user that is using the monitoring  
969 application to monitor jobs that do not belong to that user, i.e., the **jmJobOwner** object  
970 in the **jmJobTable** does not match the user's user name.

971 An operator is a privileged user that would be able to see all objects of all jobs,  
972 independent of the policy for unprivileged users.

973 **3.8 Notifications**

974 This MIB does not specify any notifications. For simplicity, management applications are  
975 expected to poll for status. The **jmGeneralJobPersistence** and  
976 **jmGeneralAttributePersistence** objects assist an application to determine the polling  
977 rate. The resulting network traffic is not expected to be significant.

978 **4. MIB specification**

979 The following pages constitute the actual Job Monitoring MIB.

```

980 Job-Monitoring-MIB DEFINITIONS ::= BEGIN
981
982 IMPORTS
    MODULE-IDENTITY, OBJECT-TYPE, experimental, Integer32
    TEXTUAL-CONVENTION
    MODULE-COMPLIANCE, OBJECT-GROUP
    -- The following textual-conventions are needed
    -- to implement certain attributes, but are not
    -- needed to compile this MIB. They are
    -- provided here for convenience:
    -- hrDeviceIndex FROM HOST-RESOURCES-MIB
    -- DateAndTime FROM SNMPv2-TC
    -- PrtInterpreterLangFamilyTC,
    -- CodedCharSet FROM Printer-MIB
983
984 -- Use the experimental (54) OID assigned to the Printer MIB[print-mib]
985 -- before it was published as RFC 1759.
986 -- Upon publication of the Job Monitoring MIB as an RFC, delete this
987 -- comment and the line following this comment and change the
988 -- reference of { temp 105 } (below) to { mib-2 X }.
989 -- This will result in changing:
990 -- 1 3 6 1 3 54 jobmonMIB(105) to:
991 -- 1 3 6 1 2 1 jobmonMIB(X)
992 -- This will make it easier to translate prototypes to
993 -- the standard namespace because the lengths of the OIDs won't
994 -- change.

 1105     STATUS current  
 1106     DESCRIPTION  
 1107         "The type of finishing operation."  
 1108  
 1109     These values are the same as the enum values of the IPP 'finishings' attribute. See Section  
 1110     3.6.1.2.  
 1111  
 1112     other(1),  
 1113         Some other finishing operation besides one of the specified or registered values.  
 1114  
 1115     **unknown(2),**  
 1116         The finishing is unknown.  
 1117  
 1118     **none(3),**  
 1119         Perform no finishing.  
 1120  
 1121     **staple(4),**  
 1122         Bind the document(s) with one or more staples. The exact number and placement of the  
 1123         staples is site-defined.  
 1124  
 1125     ~~stapleTopLeft(5),~~  
 1126         ~~Place one or more staples on the top left corner of the document(s).~~  
 1127  
 1128     ~~stapleBottomLeft(6),~~  
 1129         ~~Place one or more staples on the bottom left corner of the document(s).~~  
 1130  
 1131     ~~stapleTopRight(7),~~  
 1132         ~~Place one or more staples on the top right corner of the document(s).~~  
 1133  
 1134     ~~stapleBottomRight(8),~~  
 1135         ~~Place one or more staples on the bottom right corner of the document(s).~~  
 1136  
 1137     ~~saddleStitch(9),~~  
 1138         ~~Bind the document(s) with one or more staples (wire stitches) along the middle fold. The~~  
 1139         ~~exact number and placement of the stitches is site defined.~~  
 1140  
 1141     ~~edgeStitch(10),~~  
 1142         ~~Bind the document(s) with one or more staples (wire stitches) along one edge. The exact~~  
 1143         ~~number and placement of the staples is site defined.~~  
 1144  
 1145     **punch(511),**  
 1146         This value indicates that holes are required in the finished document. The exact number

1147 and placement of the holes is site-defined. The punch specification MAY be satisfied (in a  
 1148 site- and implementation-specific manner) either by drilling/punching, or by substituting  
 1149 pre-drilled media.  
 1150

1151 **cover(612),**  
 1152 This value is specified when it is desired to select a non-printed (or pre-printed) cover for  
 1153 the document. This does not supplant the specification of a printed cover (on cover stock  
 1154 medium) by the document itself.  
 1155

1156 **bind(713)**

 1312 STATUS current  
 1313 DESCRIPTION  
 1314 "Identifies the format type of a job submission ID.  
 1315  
 1316 Each job submission ID is a fixed-length, 48-octet printable US-ASCII [US-ASCII] coded  
 1317 character string containing no control characters, consisting of the following fields:  
 1318  
 1319 octet 1 The format letter identifying the format.  
 1320 \_\_\_\_\_ The US-ASCII characters '0-9', 'A-Z', and 'a-z'  
 1321 \_\_\_\_\_ are assigned in order giving 62 possible  
 1322 \_\_\_\_\_ formats.  
 1323 octets 2-40 A 39-character, US-ASCII trailing SPACE filled

1324 field specified by the format letter, if the  
 1325 data is less than 39 ASCII characters.  
 1326 octets 41-48 A sequential or random number to make the ID  
 1327 quasi-unique.  
 1328

1329 If the client does not supply a job submission ID in the job submission protocol, then the  
 1330 ~~agentserver~~ SHALL assign a job submission ID using any of the standard formats that are  
 1331 reserved ~~for to~~ the agent. Clients SHALL not use formats that are reserved ~~for to~~ agents and  
 1332 agents SHALL NOT use formats that are reserved for clients, in order to reduce conflicts in ID  
 1333 generation. See the description for which formats are reserved for clients or for agents.  
 1334

1335 Registration of additional formats may be done following the procedures described in Section  
 1336 3.6.3.  
 1337

1338 The format values defined at the time of completion of this specification are:  
 1339

Format	
Letter	Description
-----	-----
'0'	octets 2-40: last 39 bytes of the <b>jmJobOwner</b> object. octets 41-48: 8-decimal-digit sequential number. This format is reserved <del>for to</del> agents. <del>for use when</del> <del>the client does not supply a job submission ID.</del> <u>NOTE - Clients wishing to use a job submission ID that incorporates the job owner, SHALL use format '8', not format '0', in order to reduce the chances of one client assigning the same ID as the agent when receiving a job from another client that does not supply a job submission id.</u>
	<del>NOTE - other formats may be registered that are reserved to the agent for use when the client does not supply a job submission ID.</del>
'1'	octets 2-40: last 39 bytes of the <b>jobName</b> attribute. octets 41-48: 8-decimal-digit random number. <u>This format is reserved for clients.</u>
'2'	octets 2-40: Client MAC address: in hexadecimal with each nibble of the 6 octet address being '0'-'9' or 'A' - 'F' (uppercase only). Most significant octet first. octets 41-48: 8-decimal-digit sequential number <u>This format is reserved for clients.</u>
'3'	octets 2-40: last 39 bytes of the client URL [URI-spec].

1373	octets 41-48: 8-decimal-digit sequential number
1374	<u>This format is reserved for clients.</u>
1375	
1376	'4' octets 2-40: last 39 bytes of the URI [URI-spec]
1377	assigned by the server or device to the job when
1378	the job was submitted for processing.
1379	octets 41-48: 8-decimal-digit sequential number
1380	<u>This format is reserved for agents.</u>
1381	
1382	'5' octets 2-40: last 39 bytes of a user number, such
1383	as POSIX user number.
1384	octets 41-48: 8-decimal-digit sequential number
1385	<u>This format is reserved for clients.</u>
1386	
1387	'6' octets 2-40: last 39 bytes of the user account
1388	number.
1389	octets 41-48: 8-decimal-digit sequential number
1390	<u>This format is reserved for clients.</u>
1391	
1392	'7' octets 2-40: last 39 bytes of the DTMF incoming
1393	FAX routing number.
1394	octets 41-48: 8-decimal-digit sequential number
1395	<u>This format is reserved for clients.</u>
1396	
1397	'8' octets 2-40: last 39 bytes of the job owner name
1398	(that the agent returns in the <b>jmJobOwner</b> object).
1399	octets 41-48: 8-decimal-digit sequential number
1400	<u>This format is reserved for clients.</u>
1401	
1402	<u>'9' octets 2-40: last 39 bytes of the host name with</u>
1403	<u>trailing SPACES that submitted the job to this</u>
1404	<u>server/device using a protocol, such as LPD</u>
1405	<u>[RFC-1179] which includes the host name in the job</u>
1406	<u>submission protocol.</u>
1407	<u>octets 41-48: 8-decimal-digit leading zero</u>
1408	<u>representation of the job id generated by the</u>
1409	<u>by the submitting server (configuration 3)</u>
1410	<u>or the client (configuration 1 and 2), such as in</u>
1411	<u>the LPD protocol.</u>
1412	<u>This format is reserved for clients.</u>
1413	

NOTE - the job submission id is only intended to be unique between a limited set of clients for a limited duration of time, namely, for the life time of the job in the context of the server or device that is processing the job. Some of the formats include something that is unique per client and a random number so that the same job submitted by the same client will have a different job submission id. For other formats, where part of the id is guaranteed to be unique for each client, such as the MAC address or URL, a sequential number SHOULD suffice for each client (and may be easier for each client to manage). Therefore, the length of the job submission id has been selected to reduce the probability of collision to an extremely low number, but is not

1422 intended to be an absolute guarantee of uniqueness. None-the-less, collisions are remotely  
 1423 possible, but without bad consequences, since this MIB is intended to be used only for  
 1424 monitoring jobs, not for controlling and managing them."

 1431

1432 **JmJobStateTC** ::= TEXTUAL-CONVENTION

1433 STATUS current

1434 DESCRIPTION

1435 "The current state of the job (**pending**, **processing**, **completed**, etc.).

1436  
 1437 The following figure shows the normal job state transitions:

1448 **Figure 4 - Normal Job State Transitions**

1449 Normally a job progresses from left to right. Other state transitions are unlikely, but are not  
 1450 forbidden. Not shown are the transitions to the **canceled** state from the **pending**,  
 1451 **pendingHeld**, **processing**, and **processingStopped** states.

1452  
 1453 Jobs in the **pending**, **processing**, and **processingStopped** states are called 'active', while jobs in  
 1454 the **pendingHeld**, **canceled**, **aborted**, and **completed** states are called 'inactive'. Jobs reach one  
 1455 of the three terminal states: **completed**, **canceled**, or **aborted**, after the jobs have completed all  
 1456 activity, and all MIB objects and attributes have reached their final values for the job.

1457  
 1458 These values are the same as the enum values of the IPP 'job-state' job attribute. See Section  
 1459 3.6.1.2.

1460 **unknown(2),**

1461 The job state is *not* known, or its state is indeterminate.

1462 **pending(3),**

1463 The job is a candidate to start processing, but is not yet processing.

1464  
 1465  
 1466

1508  
1509  
1510  
1511  
1512  
1513  
1514  
1515

**pendingHeld(4),**

The job is not a candidate for processing for any number of reasons but will return to the **pending** state as soon as the reasons are no longer present. The job's **jmJobStateReasons1** object and/or **jobStateReasonsN** ( $N=2..4$ ) attributes SHALL indicate why the job is no longer a candidate for processing. The reasons are represented as bits in the **jmJobStateReasons1** object and/or **jobStateReasonsN** ( $N=2..4$ ) attributes. See the **JmJobStateReasonsNTC** ( $N=1..4$ ) textual convention for the specification of each reason.

**processing(5),**One of Either:

1. the job is using, or is attempting to use, one or more ~~document transforms which include (1)~~ purely software processes that are analyzing, creating, or interpreting a PDL, etc., and (2)

2. the job is using, or is attempting to use, one or more hardware devices that are interpreting a PDL, making marks on a medium, and/or performing finishing, such as stapling, etc.,

OR

3. (configuration 2) the server has made the job ready for printing, but the output device is not yet printing it, either because the job hasn't reached the output device or because the job is queued in the output device or some other spooler, awaiting the output device to print it.

When the job is in the **processing** state, the entire job state includes the detailed status represented in the device MIB indicated by the **hrDeviceIndex** value of the job's **physicalDevice** attribute, if the agent implements such a device MIB.

Implementations MAY, though they NEED NOT, include additional values in the job's **jmJobStateReasons1** object to indicate the progress of the job, such as adding the **jobPrinting** value to indicate when the device is actually making marks on a medium and/or the **processingToStopPoint** value to indicate that the server or device is in the process of canceling or aborting the job.

**processingStopped(6),**

The job has stopped while processing for any number of reasons and will return to the **processing** state as soon as the reasons are no longer present.

The job's **jmJobStateReasons1** object and/or the job's **jobStateReasonsN** ( $N=2..4$ ) attributes MAY indicate why the job has stopped processing. For example, if the output device is stopped, the **deviceStopped** value MAY be included in the job's **jmJobStateReasons1** object.

NOTE - When an output device is stopped, the device usually indicates its condition in human readable form at the device. The management application can obtain more

1516 complete device status remotely by querying the appropriate device MIB using the job's  
 1517 **deviceIndex** attribute(s), if the agent implements such a device MIB  
 1518

1519 **canceled(7),**

1520 A client has canceled the job and ~~the job is either: (1) in the process of being terminated by~~  
 1521 ~~the server or device or (2) has completed~~ canceled the job and all MIB objects and  
 1522 attributes have reached their final values for the job terminating. While the server or device  
 1523 is canceling the job, the job's **jmJobStateReasons1** object SHOULD contain the  
 1524 processingToStopPoint value and one of either the canceledByUser, or  
 1525 canceledByOperator, or canceledAtDevice values. The canceledByUser,  
 1526 canceledByOperator, or canceledAtDevice values remain while the job is in the  
 1527 canceled state.  
 1528

1529 **aborted(8),**

1530 The job has been aborted by the system, usually while the job was in the **processing** or  
 1531 **processingStopped** state and the server or device has completed aborting the job and all  
 1532 MIB objects and attributes have reached their final values for the job. While the server or  
 1533 device is aborting the job, the job's jmJobStateReasons1 object MAY contain the  
 1534 processingToStopPoint and abortedBySystem values. If implemented, the  
 1535 abortedBySystem value SHALL remain while the job is in the aborted state.  
 1536

1537 **completed(9)**

1538 The job has completed successfully or with warnings or errors after processing and all of  
 1539 the media have been successfully stacked in the appropriate output bin(s). The job's  
 1540 **jmJobStateReasons1** object SHOULD contain one of: **completedSuccessfully,**  
 1541 **completedWithWarnings,** or **completedWithErrors** values."  
 1542

1542 REFERENCE

1543 "This is a type 2 enumeration. See Section 3.6.1.2."

1553 }

1554  
 1555  
 1556 **JmAttributeTypeTC ::= TEXTUAL-CONVENTION**

1557 STATUS current

1558 DESCRIPTION

1559 "The type of the attribute which identifies the attribute.  
 1560

1561 In the following definitions of the enums, each description indicates whether the useful value of  
 1562 the attribute SHALL be represented using the **jmAttributeValueAsInteger** or the

1563 **jmAttributeValueAsOctets** objects by the initial tag: 'INTEGER:' or 'OCTETS:',  
 1564 respectively.

1565  
 1566 Some attributes allow the agent implementer a choice of useful values of either an integer, an  
 1567 octets representation, or both, depending on implementation. These attributes are indicated with  
 1568 'INTEGER:' AND/OR 'OCTETS:' tags.

1569  
 1570 A very few attributes require both objects at the same time to represent a pair of useful values  
 1571 (see **mediumConsumed(171)**). These attributes are indicated with 'INTEGER:' AND  
 1572 'OCTETS:' tags. See the **jmAttributeGroup** for the descriptions of these two MANDATORY  
 1573 objects.

1574  
 1575 NOTE - The enum assignments are grouped logically with values assigned in groups of 20, so  
 1576 that additional values may be registered in the future and assigned a value that is part of their  
 1577 logical grouping.

1578  
 1579 Values in the range 2\*\*30 to 2\*\*31-1 are reserved for private or experimental usage. This  
 1580 range corresponds to the same range reserved in IPP. Implementers are warned that use of such  
 1581 values may conflict with other implementations. Implementers are encouraged to request  
 1582 registration of enum values following the procedures in Section 3.6.1.

1583  
 1584 NOTE: No attribute name exceeds 31 characters.

1585  
 1586 The standard attribute types defined at the time of completion of the specification are:

<b>jmAttributeTypeIndex</b>	<b>Datatype</b>
-----	-----
<b>other(1),</b>	<b>Integer32(-2..2147483647)</b> <b>AND/OR</b> <b>OCTET STRING(SIZE(0..63))</b>
INTEGER: and/or OCTETS: An attribute that is not in the list and/or that has not been approved and registered with IANA.

 1599 + **Job State attributes**  
 1600 +  
 1601 + **The following attributes specify the state of a job.**  
 1602 ++++++

1603  
 1604 **jobStateReasons2(3),** **JmJobStateReasons2TC**  
 1605 INTEGER: Additional information about the job's current state that augments the  
 1606 **jmJobState** object. See the description under the **JmJobStateReasons1TC** textual-  
 1607 convention.

1608  
 1609 **jobStateReasons3(4),** **JmJobStateReasons3TC**  
 1610 INTEGER: Additional information about the job's current state that augments the

1611 **jmJobState** object. See the description under **JmJobStateReasons1TC** textual-  
1612 convention.

1613  
1614 **jobStateReasons4(5),** **JmJobStateReasons4TC**  
1615 INTEGER: Additional information about the job's current state that augments the  
1616 **jmJobState** object. See the description under **JmJobStateReasons1TC** textual-  
1617 convention.

1618  
1619 **processingMessage(6),** **JmUTF8StringTC(SIZE(0..63))**  
1620 OCTETS: MULTI-ROW: A coded character set message that is generated by the server  
1621 or device during the processing of the job as a simple form of processing log to show  
1622 progress and any problems.

1623  
1624 There is no restriction for the same message occurring in multiple rows.

1625  
1626 **jobCodedCharSet(7),** **CodedCharSet**  
1627 INTEGER: The MIBenum identifier of the coded character set that the agent is using to  
1628 represent coded character set objects and attributes of type '**JmJobStringTC**'. These  
1629 coded character set objects and attributes are either: (1) supplied by the job submitting  
1630 client or (2) defaulted by the server or device when omitted by the job submitting client.  
1631 The agent SHALL represent these objects and attributes in the MIB either (1) in the coded  
1632 character set as they were submitted or (2) MAY convert the coded character set to  
1633 another coded character set or encoding scheme as identified by the **jobCodedCharSet**  
1634 attribute.

1635  
1636 These MIBenum values are assigned by IANA [IANA-charsets] when the coded character  
1637 sets are registered. The coded character set SHALL be one of the ones registered with  
1638 IANA [IANA] and the enum value uses the **CodedCharSet** textual-convention from the  
1639 Printer MIB. See the **JmJobStringTC** textual-convention.

1640  
1641 If the agent does not know what coded character set was used by the job submitting client,  
1642 the agent SHALL either (1) return the 'unknown(2)' value for the **jobCodedCharSet**  
1643 attribute or (2) not return the **jobCodedCharSet** attribute for the job. See Section 3.5.2,  
1644 entitled 'Text generated by the job submitter'.

1708

NOTE - The agent may be able to generate this value on each SNMP Get operation from smaller values, rather than having to store the entire URI.

If the URI exceeds 255 octets, the agent SHALL truncate from the beginning (since the end tends to be more unique than the beginning).

**jobAccountName(21),** **OCTET**  
**STRINGJmJobStringTC(SIZE(0..63))**

OCTETS: Arbitrary binary information which MAY be coded character set data or encrypted data supplied by the submitting user for use by accounting services to allocate or categorize charges for services provided, such as a customer account name or number.

NOTE: This attribute NEED NOT be printable characters.

**serverAssignedJobName(22),** **JmJobStringTC(SIZE(0..63))**

OCTETS: Configuration 3 only: The human readable string name, number, or ID of the job as assigned by the server that submitted the job to the device that the agent is providing access to with this MIB.

NOTE - This attribute is intended for enabling a user to find his/her job that a server submitted to a device when either the client does not support the **jmJobSubmissionID** or the server does not pass the **jmJobSubmissionID** through to the device.

**jobName(23),** **JmJobStringTC(SIZE(0..63))**

OCTETS: The human readable string name of the job as assigned by the submitting user to help the user distinguish between his/her various jobs. This name does not need to be unique.

This attribute is intended for enabling a user or the user's application to convey a job name that MAY be printed on a start sheet, returned in a **query** result, or used in notification or logging messages.

In order to assist users to find their jobs for job submission protocols that don't supply a **jmJobSubmissionID**, the agent SHOULD maintain the **jobName** attribute for the time specified by the **jmGeneralJobPersistence** object, rather than the (shorter) **jmGeneralAttributePersistence** object.

If this attribute is not specified when the job is submitted, no job name is assumed, but implementation specific defaults are allowed, such as the value of the **documentName** attribute of the first document in the job or the **fileName** attribute of the first document in the job.

The **jobName** attribute is distinguished from the **jobComment** attribute, in that the **jobName** attribute is intended to permit the submitting user to distinguish between different jobs that he/she has submitted. The **jobComment** attribute is intended to be free form additional information that a user might wish to use to communicate with himself/herself, such as a reminder of what to do with the results or to indicate a different set of input parameters were tried in several different job submissions.

1709		
1710	<b>jobServiceTypes(24),</b>	<b>JmJobServiceTypesTC</b>
1711	INTEGER: Specifies the type(s) of service to which the job has been submitted (print, fax, scan, etc.). The service type is bit encoded with each job service type so that more general and arbitrary services can be created, such as services with more than one destination type, or ones with only a source or only a destination. For example, a job service might <b>scan</b> , <b>faxOut</b> , and <b>print</b> a single job. In this case, three bits would be set in the <b>jobServiceTypes</b> attribute, corresponding to the hexadecimal values: <b>0x8</b> + <b>0x20</b> + <b>0x4</b> , respectively, yielding: <b>0x2C</b> .	
1712		
1713		
1714		
1715		
1716		
1717		
1718		
1719	Whether this attribute is set from a job attribute supplied by the job submission client or is set by the recipient job submission server or device depends on the job submission protocol. This attribute SHALL be implemented if the server or device has other types in addition to or instead of printing.	
1720		
1721		
1722		
1723		
1724	One of the purposes of this attribute is to permit a requester to filter out jobs that are not of interest. For example, a printer operator may only be interested in jobs that include printing.	
1725		
1726		
1727		
1728	<b>jobSourceChannelIndex(25),</b>	Integer32(0..2147483647)
1729	INTEGER: The index of the row in the associated Printer MIB[print-mib] of the channel which is the source of the print job.	
1730		
1731		
1732	<b>jobSourcePlatformType(26),</b>	<b>JmJobSourcePlatformTypeTC</b>
1733	INTEGER: The source platform type of the immediate upstream submitter that submitted the job to the server (configuration 2) or device (configuration 1 and 3) to which the agent is providing access. For configuration 1, this is the type of the client that submitted the job to the device; for configuration 2, this is the type of the client that submitted the job to the server; and for configuration 3, this is the type of the server that submitted the job to the device.	
1734		
1735		
1736		
1737		
1738		
1739		
1740	<b>submittingServerName(27),</b>	<b>JmJobStringTC(SIZE(0..63))</b>
1741	OCTETS: For configuration 3 only: The administrative name of the server that submitted the job to the device.	
1742		
1743		
1744	<b>submittingApplicationName(28),</b>	<b>JmJobStringTC(SIZE(0..63))</b>
1745	OCTETS: The name of the client application (not the server in configuration 3) that submitted the job to the server or device.	
1746		
1747		
1748	<b>jobOriginatingHost(29),</b>	<b>JmJobStringTC(SIZE(0..63))</b>
1749	OCTETS: The name of the client host (not the server host name in configuration 3) that submitted the job to the server or device.	
1750		
1751		
1752	<b>deviceNameRequested(30),</b>	<b>JmJobStringTC(SIZE(0..63))</b>
1753	OCTETS: The administratively defined coded character set name of the target device requested by the submitting user. For configuration 1, its value corresponds to the Printer MIB[print-mib]: <b>prtGeneralPrinterName</b> object. For configuration 2 and 3, its value is the name of the logical or physical device that the user supplied to indicate to the server on which device(s) they wanted the job to be processed.	
1754		
1755		
1756		
1757		

1758  
1759 **queueNameRequested(31),** **JmJobStringTC(SIZE(0..63))**  
1760 OCTETS: The administratively defined coded character set name of the target queue  
1761 requested by the submitting user. For configuration 1, its value corresponds to the queue  
1762 in the device for which the agent is providing access. For configuration 2 and 3, its value  
1763 is the name of the queue that the user supplied to indicate to the server on which device(s)  
1764 they wanted the job to be processed.  
1765  
1766 NOTE - typically an implementation SHOULD support either the **deviceNameRequested**  
1767 or **queueNameRequested** attribute, but not both.  
1768  
1769 **physicalDevice(32),** **hrDeviceIndex**  
1770 AND/OR  
1771 **JmUTF8StringTC(SIZE(0..63))**  
1772 INTEGER: MULTI-ROW: The index of the physical device MIB instance  
1773 requested/used, such as the Printer MIB[print-mib]. This value is an **hrDeviceIndex**  
1774 value. See the Host Resources MIB[hr-mib].  
1775  
1776 AND/OR  
1777  
1778 OCTETS: MULTI-ROW: The name of the physical device to which the job is assigned.  
1779  
1780 **numberOfDocuments(33),** **Integer32(-2..2147483647)**  
1781 INTEGER: The number of documents in this job.  
1782  
1783 **fileName(34),** **JmJobStringTC(SIZE(0..63))**  
1784 OCTETS: MULTI-ROW: The coded character set file name or URI[URI-spec] of the  
1785 document.  
1786  
1787 There is no restriction on the same file name occurring in multiple rows.  
1788  
1789 **documentName(35),** **JmJobStringTC(SIZE(0..63))**  
1790 OCTETS: MULTI-ROW: The coded character set name of the document.  
1791  
1792 There is no restriction on the same document name occurring in multiple rows.  
1793  
1794 **jobComment(36),** **JmJobStringTC(SIZE(0..63))**  
1795 OCTETS: An arbitrary human-readable coded character text string supplied by the  
1796 submitting user or the job submitting application program for any purpose. For example,  
1797 a user might indicate what he/she is going to do with the printed output or the job  
1798 submitting application program might indicate how the document was produced.  
1799  
1800 The **jobComment** attribute is not intended to be a name; see the **jobName** attribute.  
1801  
1802 **documentFormatIndex(37),** **Integer32(0..2147483647)**  
1803 INTEGER: MULTI-ROW: The index in the **prtInterpreterTable** in the Printer  
1804 MIB[print-mib] of the page description language (PDL) or control language interpreter  
1805 that this job requires/uses. A document or a job MAY use more than one PDL or control  
1806 language.

1855

NOTE - As with all intensive attributes where multiple rows are allowed, there SHALL be only one distinct row for each distinct interpreter; there SHALL be no duplicates.

NOTE - This attribute type is intended to be used with an agent that implements the Printer MIB and SHALL not be used if the agent does not implement the Printer MIB. Such an agent SHALL use the **documentFormat** attribute instead.

**documentFormat(38),** **PrtInterpreterLangFamilyTC**  
**AND/OR**  
**OCTET STRING(SIZE(0..63))**

INTEGER: MULTI-ROW: The interpreter language family corresponding to the Printer MIB[print-mib] **prtInterpreterLangFamily** object, that this job requires/uses. A document or a job MAY use more than one PDL or control language.

AND/OR

OCTETS: MULTI-ROW: The document format registered as a media type[iana-media-types], i.e., the name of the MIME content-type/subtype. Examples: 'application/postscript', 'application/vnd.hp-PCL', and 'application/pdf'

++++  
+ **Job Parameter attributes**  
+  
+ **The following attributes represent input parameters**  
+ **supplied by the submitting client in the job submission**  
+ **protocol.**  
++++

**jobPriority(50),** **Integer32(1..100)**

INTEGER: The priority for scheduling the job. It is used by servers and devices that employ a priority-based scheduling algorithm.

A higher value specifies a higher priority. The value **1** is defined to indicate the lowest possible priority (a job which a priority-based scheduling algorithm SHALL pass over in favor of higher priority jobs). The value **100** is defined to indicate the highest possible priority. Priority is expected to be evenly or 'normally' distributed across this range. The mapping of vendor-defined priority over this range is implementation-specific.

**jobProcessAfterDateAndTime(51),** **DateAndTime (SNMPv2-TC)**

OCTETS: The calendar date and time of day after which the job SHALL become a candidate to be scheduled for processing. If the value of this attribute is in the future, the server SHALL set the value of the job's **jmJobState** object to **pendingHeld** and add the **jobProcessAfterSpecified** bit value to the job's **jmJobStateReasons1** object. When the specified date and time arrives, the server SHALL remove the **jobProcessAfterSpecified** bit value from the job's **jmJobStateReasons1** object and, if no other reasons remain, SHALL change the job's **jmJobState** object to **pending**.

1856 **jobHold(52),** **JmBooleanTC**  
 1857 INTEGER: If the value is 'true(4)', a client has explicitly specified that the job is to be  
 1858 held until explicitly released. Until the job is explicitly released by a client, the job SHALL  
 1859 be in the **pendingHeld** state with the **jobHoldSpecified** value in the  
 1860 **jmJobStateReasons1** attribute.  
 1861

1862 **jobHoldUntil(53),** **JmJobStringTC(SIZE(0..63))**  
 1863 OCTETS: The named time period during which the job SHALL become a candidate for  
 1864 processing, such as 'evening', 'night', 'weekend', 'second-shift', 'third-shift', etc., as  
 1865 defined by the system administrator. See IPP [ipp-model] for the standard keyword  
 1866 values. Until that time period arrives, the job SHALL be in the **pendingHeld** state with  
 1867 the **jobHoldUntilSpecified** value in the **jmJobStateReasons1** object. The value 'no-  
 1868 hold' SHALL indicate explicitly that no time period has been specified; the absence of this  
 1869 attribute SHALL indicate implicitly that no time period has been specified.  
 1870

1871 **outputBin(54),** **Integer32(0..2147483647)**  
 1872 **AND/OR**  
 1873 **JmJobStringTC(SIZE(0..63))**  
 1874 INTEGER: MULTI-ROW: The output subunit index in the Printer MIB[print-mib]  
 1875  
 1876 **AND/OR**  
 1877  
 1878 OCTETS: the name or number (represented as ASCII digits) of the output bin to which  
 1879 all or part of the job is placed in.  
 1880

1881 **sides(55),** **Integer32(-2..2)**  
 1882 INTEGER: MULTI-ROW: The number of sides, '1' or '2', that any document in this job  
 1883 requires/used.  
 1884

1885 **finishing(56),** **JmFinishingTC**  
 1886 INTEGER: MULTI-ROW: Type of finishing that any document in this job requires/used.  
 1887  
 1888  
 1889 ++++++  
 1890 + **Image Quality attributes (requested and consumed)**  
 1891 +  
 1892 + **For devices that can vary the image quality.**  
 1893 ++++++

1894

1895 **printQualityRequested(70),** **JmPrintQualityTC**  
 1896 INTEGER: MULTI-ROW: The print quality selection requested for a document in the  
 1897 job for printers that allow quality differentiation.  
 1898

1899 **printQualityUsed(71),** **JmPrintQualityTC**  
 1900 INTEGER: MULTI-ROW: The print quality selection actually used by a document in the  
 1901 job for printers that allow quality differentiation.  
 1902

1903 **printerResolutionRequested(72),** **JmPrinterResolutionTC**  
1904 OCTETS: MULTI-ROW: The printer resolution requested for a document in the job for  
1905 printers that support resolution selection.  
1906

1907 **printerResolutionUsed(73),** **JmPrinterResolutionTC**  
1908 OCTETS: MULTI-ROW: The printer resolution actually used by a document in the job  
1909 for printers that support resolution selection.  
1910

1911 **tonerEcomonyRequested(74),** **JmTonerEconomyTC**  
1912 INTEGER: MULTI-ROW: The toner economy selection requested for documents in the  
1913 job for printers that allow toner economy differentiation.  
1914

1915 **tonerEcomonyUsed(75),** **JmTonerEconomyTC**  
1916 INTEGER: MULTI-ROW: The toner economy selection actually used by documents in  
1917 the job for printers that allow toner economy differentiation.  
1918

1919 **tonerDensityRequested(76),** **Integer32(-2..100)**  
1920 INTEGER: MULTI-ROW: The toner density requested for a document in this job for  
1921 devices that can vary toner density levels. Level 1 is the lowest density and level 100 is  
1922 the highest density level. Devices with a smaller range, SHALL map the 1-100 range  
1923 evenly onto the implemented range.  
1924

1925 **tonerDensityUsed(77),** **Integer32(-2..100)**  
1926 INTEGER: MULTI-ROW: The toner density used by documents in this job for devices  
1927 that can vary toner density levels. Level 1 is the lowest density and level 100 is the highest  
1928 density level. Devices with a smaller range, SHALL map the 1-100 range evenly onto the  
1929 implemented range.  
1930

1931  
1932 ++++++  
1933 + **Job Progress attributes (requested and consumed)**  
1934 +  
1935 + **Pairs of these attributes can be used by monitoring**  
1936 + **applications to show an indication of relative progress**  
1937 + **to users.**  
1938 ++++++

1939  
1940 **jobCopiesRequested(90),** **Integer32(-2..2147483647)**  
1941 INTEGER: The number of copies of the entire job that are to be produced.  
1942

1943 **jobCopiesCompleted(91),** **Integer32(-2..2147483647)**  
1944 INTEGER: The number of copies of the entire job that have been completed so far.  
1945

1946 **documentCopiesRequested(92),** **Integer32(-2..2147483647)**  
1947 INTEGER: The total count of the number of document copies requested for the job as a  
1948 whole. If there are documents A, B, and C, and document B is specified to produce 4  
1949 copies, the number of document copies requested is 6 for the job.  
1950

1951 This attribute SHALL be used only when a job has multiple documents. The  
1952 **jobCopiesRequested** attribute SHALL be used when the job has only one document.  
1953  
1954 **documentCopiesCompleted(93), Integer32(-2..2147483647)**  
1955 INTEGER: The total count of the number of document copies completed so far for the  
1956 job as a whole. If there are documents A, B, and C, and document B is specified to  
1957 produce 4 copies, the number of document copies starts a 0 and runs up to 6 for the job as  
1958 the job processes.  
1959  
1960 This attribute SHALL be used only when a job has multiple documents. The  
1961 **jobCopiesCompleted** attribute SHALL be used when the job has only one document.  
1962  
1963 **jobKOctetsTransferred(94), Integer32(-2..2147483647)**  
1964 INTEGER: The number of K (1024) octets transferred to the server or device to which  
1965 the agent is providing access. This count is independent of the number of copies of the  
1966 job or documents that will be produced, but it is only a measure of the number of bytes  
1967 transferred to the server or device.  
1968  
1969 The agent SHALL round the actual number of octets transferred up to the next higher K.  
1970 Thus 0 octets SHALL be represented as '0', 1-1024 octets SHALL BE represented as '1',  
1971 1025-2048 SHALL be '2', etc. When the job completes, the values of the  
1972 **jmJobKOctetsRequested** object and the **jobKOctetsTransferred** attribute SHALL be  
1973 equal.  
1974  
1975 NOTE - The **jobKOctetsTransferred** can be used with the **jmJobKOctetsRequested**  
1976 object in order to produce a relative indication of the progress of the job for agents that do  
1977 not implement the **jmJobKOctetsProcessed** object.  
1978  
1979  
1980 ++++++  
1981 + **Impression attributes**  
1982 +  
1983 + **For a print job, an impression is the marking of the**  
1984 + **entire side of a sheet. Two-sided processing involves two**  
1985 + **impressions per sheet. Two-up is the placement of two**  
1986 + **logical pages on one side of a sheet and so is still a**  
1987 + **single impression. See also jmJobImpressionsRequested and**  
1988 + **jmJobImpressionsCompleted objects in the jmJobTable.**  
1989 ++++++  
1990  
1991 **impressionsSpooled(110), Integer32(-2..2147483647)**  
1992 INTEGER: The number of impressions spooled to the server or device for the job so far.  
1993  
1994 **impressionsSentToDevice(111), Integer32(-2..2147483647)**  
1995 INTEGER: The number of impressions sent to the device for the job so far.  
1996  
1997 **impressionsInterpreted(112), Integer32(-2..2147483647)**  
1998 INTEGER: The number of impressions interpreted for the job so far.

**impressionsCompletedCurrentCopy(113), Integer32(-2..2147483647)**

INTEGER: The number of impressions completed by the device for the current copy of the current document so far. For printing, the impressions completed includes interpreting, marking, and stacking the output. For other types of job services, the number of impressions completed includes the number of impressions processed.

This value SHALL be reset to 0 for each document in the job and for each document copy.

**fullColorImpressionsCompleted(114), Integer32(-2..2147483647)**

INTEGER: The number of full color impressions completed by the device for this job so far. For printing, the impressions completed includes interpreting, marking, and stacking the output. For other types of job services, the number of impressions completed includes the number of impressions processed. Full color impressions are typically defined as those requiring 3 or more colorants, but this MAY vary by implementation.

**highlightColorImpressionsCompleted(115), Integer32(-2..2147483647)**

INTEGER: The number of highlight color impressions completed by the device for this job so far. For printing, the impressions completed includes interpreting, marking, and stacking the output. For other types of job services, the number of impressions completed includes the number of impressions processed. Highlight color impressions are typically defined as those requiring black plus one other colorant, but this MAY vary by implementation.

++++  
+ Page attributes  
+  
+ A page is a logical page. Number up can impose more than  
+ one page on a single side of a sheet. Two-up is the  
+ placement of two logical pages on one side of a sheet so  
+ that each side counts as two pages.  
++++

**pagesRequested(130), Integer32(-2..2147483647)**

INTEGER: The number of logical pages requested by the job to be processed.

**pagesCompleted(131), Integer32(-2..2147483647)**

INTEGER: The number of logical pages completed for this job so far.

For implementations where multiple copies are produced by the interpreter with only a single pass over the data, the final value SHALL be equal to the value of the **pagesRequested** object. For implementations where multiple copies are produced by the interpreter by processing the data for each copy, the final value SHALL be a multiple of the value of the **pagesRequested** object.

2047 NOTE - See the **impressionsCompletedCurrentCopy** and  
2048 **pagesCompletedCurrentCopy** attributes for attributes that are reset on each document  
2049 copy.  
2050

2051 NOTE - The **pagesCompleted** object can be used with the **pagesRequested** object to  
2052 provide an indication of the relative progress of the job, provided that the multiplicative  
2053 factor is taken into account for some implementations of multiple copies.  
2054

2055 **pagesCompletedCurrentCopy(132), Integer32(-2..2147483647)**  
2056 INTEGER: The number of logical pages completed for the current copy of the document  
2057 so far. This value SHALL be reset to **0** for each document in the job and for each  
2058 document copy.  
2059

2061 ++++++  
2062 + **Sheet attributes**  
2063 +  
2064 + **The sheet is a single piece of a medium, whether printing**  
2065 + **on one or both sides.**  
2066 ++++++

2067  
2068 **sheetsRequested(150), Integer32(-2..2147483647)**  
2069 INTEGER: The number of medium sheets requested to be processed for this job.  
2070

2071 **sheetsCompleted(151), Integer32(-2..2147483647)**  
2072 INTEGER: The number of medium sheets that have completed marking and stacking for  
2073 the entire job so far whether those sheets have been processed on one side or on both.  
2074

2075 **sheetsCompletedCurrentCopy(152), Integer32(-2..2147483647)**  
2076 INTEGER: The number of medium sheets that have completed marking and stacking for  
2077 the current copy of a document in the job so far whether those sheets have been processed  
2078 on one side or on both.  
2079

2080 The value of this attribute SHALL be reset to **0** as each document in the job starts being  
2081 processed and for each document copy as it starts being processed.  
2082

2083

 2129 +  
 2130 + **This section of attributes are ones that are set by the**  
 2131 + **server or device that accepts jobs. Two forms of time are**  
 2132 + **provided. Each form is represented in a separate attribute.**  
 2133 + **See section 3.1.2 and section 3.1.3 for the**  
 2134 + **conformance requirements for time attribute for agents and**  
 2135 + **monitoring applications, respectively. The two forms are:**  
 2136 +  
 2137 + **'DateAndTime' is an 8 or 11 octet binary encoded year,**  
 2138 + **month, day, hour, minute, second, deci-second with**  
 2139 + **optional offset from UTC. See SNMPv2-TC [SMIv2-TC].**  
 2140 +  
 2141 + **NOTE: 'DateAndTime' is not printable characters; it is**  
 2142 + **binary.**  
 2143 +  
 2144 + **'JmTimeStampTC' is the time of day measured in the number of**

2145 + seconds since the system was booted.  
 2146 ++++++

2147

2148 **jobSubmissionToServerTime(190),** **JmTimeStampTC**  
 2149 AND/OR  
 2150 **DateAndTime**  
 2151 INTEGER: Configuration 3 only: The time  
 2152 AND/OR  
 2153 OCTETS: the date and time that the job was submitted to the server (as distinguished  
 2154 from the device which uses jobSubmissionTime).  
 2155

2156 **jobSubmissionTime(191),** **JmTimeStampTC**  
 2157 AND/OR  
 2158 **DateAndTime**  
 2159 INTEGER: Configurations 1, 2, and 3: The time  
 2160 AND/OR  
 2161 OCTETS: the date and time that the job was submitted to the server or device to which  
 2162 the agent is providing access.  
 2163  
 2164  
 2165

2166 **jobStartedBeingHeldTime(192),** **JmTimeStampTC**  
 2167 AND/OR  
 2168 **DateAndTime**  
 2169 INTEGER: The time  
 2170 AND/OR  
 2171 OCTETS: the date and time that the job last entered the **pendingHeld** state. If the job  
 2172 has never entered the **pendingHeld** state, then the value SHALL be '0' or the attribute  
 2173 SHALL not be present in the table.  
 2174

2175 **jobStartedProcessingTime(193),** **JmTimeStampTC**  
 2176 AND/OR  
 2177 **DateAndTime**  
 2178 INTEGER: The time  
 2179 AND/OR  
 2180 OCTETS: the date and time that the job started processing.  
 2181

2182 **jobCompletion~~ed~~Time(194),** **JmTimeStampTC**  
 2183 AND/OR  
 2184 **DateAndTime**  
 2185 INTEGER: The time  
 2186 AND/OR  
 2187 OCTETS: the date and time that the job entered the **completed, canceled, or aborted**  
 2188 state.  
 2189

2190 **jobProcessingCPUtime(195)** **Integer32(-2..2147483647)**  
 2191 **UNITS 'seconds'**  
 2192 INTEGER: The amount of CPU time in seconds that the job has been in the **processing**  
 2193 state. If the job enters the **processingStopped** state, that elapsed time SHALL not be

2194 included. In other words, the **jobProcessingCPUTime** value SHOULD be relatively  
 2195 repeatable when the same job is processed again on the same device."  
 2196

2197 REFERENCE

2198 "See Section 3.2 entitled 'The Attribute Mechanism' for a description of this textual-convention  
 2199 and its use in the **jmAttributeTable**.

2200 This is a type 2 enumeration. See Section 3.6.1.2."

2285 **JmJobServiceTypesTC ::= TEXTUAL-CONVENTION**

2286     STATUS     current

2287     DESCRIPTION

2288         "Specifies the type(s) of service to which the job has been submitted (print, fax, scan, etc.). The  
2289         service type is represented as an enum that is bit encoded with each job service type so that  
2290         more general and arbitrary services can be created, such as services with more than one

2291 destination type, or ones with only a source or only a destination. For example, a job service  
 2292 might **scan**, **faxOut**, and **print** a single job. In this case, three bits would be set in the  
 2293 **jobServiceTypes** attribute, corresponding to the hexadecimal values: **0x8** + **0x20** + **0x4**,  
 2294 respectively, yielding: **0x2C**.  
 2295

2296 Whether this attribute is set from a job attribute supplied by the job submission client or is set by  
 2297 the recipient job submission server or device depends on the job submission protocol. With  
 2298 either implementation, the agent SHALL return a non-zero value for this attribute indicating the  
 2299 type of the job.  
 2300

2301 One of the purposes of this attribute is to permit a requester to filter out jobs that are not of  
 2302 interest. For example, a printer operator MAY only be interested in jobs that include printing.  
 2303 That is why the attribute is in the job identification category.  
 2304

2305 The following service component types are defined (in hexadecimal) and are assigned a separate  
 2306 bit value for use with the **jobServiceTypes** attribute:  
 2307

2308 **other 0x1**

2309 The job contains some instructions that are not one of the identified types.  
 2310

2311 **unknown 0x2**

2312 The job contains some instructions whose type is unknown to the agent.  
 2313

2314 **print 0x4**

2315 The job contains some instructions that specify printing  
 2316

2317 **scan 0x8**

2318 The job contains some instructions that specify scanning  
 2319

2320 **faxIn 0x10**

2321 The job contains some instructions that specify receive fax  
 2322

2323 **faxOut 0x20**

2324 The job contains some instructions that specify sending fax  
 2325

2326 **getFile 0x40**

2327 The job contains some instructions that specify accessing files or documents  
 2328

2329 **putFile 0x80**

2330 The job contains some instructions that specify storing files or documents  
 2331

2332 **mailList 0x100**

2333 The job contains some instructions that specify distribution of documents using an  
 2334 electronic mail system."  
 2335

2336 REFERENCE

2337 "These bit definitions are the equivalent of a type 2 enum except that combinations of them  
 2338 MAY be used together. See section 3.6.1.2."

SYNTAX INTEGER(0..2147483647) -- 31 bits, all but sign bit

2339

2340

2341

2342

2343 **JmJobStateReasons1TC** ::= TEXTUAL-CONVENTION

2344 STATUS current

2345 DESCRIPTION

2346 "The **JmJobStateReasonsN**TC ( $N=1..4$ ) textual-conventions are used with the  
 2347 **jmJobStateReasons1** object and **jobStateReasonsN** ( $N=2..4$ ), respectively, to provide  
 2348 additional information regarding the current **jmJobState** object value. These values MAY be  
 2349 used with any job state or states for which the reason makes sense.

2350

2351 NOTE - While values cannot be added to the **jmJobState** object without impacting deployed  
 2352 clients that take actions upon receiving **jmJobState** values, it is the intent that additional  
 2353 **JmJobStateReasonsN**TC enums can be defined and registered without impacting such  
 2354 deployed clients. In other words, the **jmJobStateReasons1** object and **jobStateReasonsN**  
 2355 attributes are intended to be extensible.

2356

2357 NOTE - The Job Monitoring MIB contains a superset of the IPP values[ipp-model] for the IPP  
 2358 'job-state-reasons' attribute, since the Job Monitoring MIB is intended to cover other job  
 2359 submission protocols as well. Also some of the names of the reasons have been changed from  
 2360 'printer' to 'device', since the Job Monitoring MIB is intended to cover additional types of  
 2361 devices, including input devices, such as scanners.

2362

2363 The following standard values are defined (in hexadecimal) as *powers of two*, since multiple  
 2364 values MAY be used at the same time. For ease of understanding, the  
 2365 **JmJobStateReasons1TC** reasons are presented in the order in which the reasons are likely to  
 2366 occur (if implemented), starting with the '**jobIncoming**' value and ending with the  
 2367 '**jobCompletedWithErrors**' value.

2368

2369 **other** **0x1**

The job state reason is not one of the standardized or registered reasons.

2370

2371 **unknown** **0x2**

The job state reason is not known to the agent or is indeterminate.

2372

2373 **jobIncoming** **0x4**

The job has been accepted by the server or device, but the server or device is expecting  
 (1) additional operations from the client to finish creating the job and/or (2) is  
 accessing/accepting document data.

2376

2377 **submissionInterrupted** **0x8**

The job was not completely submitted for some unforeseen reason, such as: (1) the server  
 has crashed before the job was closed by the client, (2) the server or the document transfer  
 method has crashed in some non-recoverable way before the document data was entirely

2382

2383

2384		<u>transferred to the server, (3) the client crashed or failed to close the job before the time-</u>
2385		<u>out period.</u>
2386		
2387	<b>jobOutgoing</b>	<b>0x108</b>
2388		Configuration 2 only: The server is transmitting the job to the device.
2389		
2390	<b>jobHoldSpecified</b>	<b>0x2010</b>
2391		The value of the job's jobHold(52) attribute is TRUE. The job SHALL NOT be a
2392		candidate for processing until this reason is removed and there are no other reasons to
2393		hold the job.
2394		
2395	<b>jobHoldUntilSpecified</b>	<b>0x4020</b>
2396		The value of the job's jobHoldUntil(53) attribute specifies a time period that is still in the
2397		future. The job SHALL NOT be a candidate for processing until this reason is removed
2398		and there are no other reasons to hold the job.
2399		
2400	<b>jobProcessAfterSpecified</b>	<b>0x8040</b>
2401		The value of the job's jobProcessAfterDateAndTime(51) attribute specifies a time that is
2402		still in the future. The job SHALL NOT be a candidate for processing until this reason is
2403		removed and there are no other reasons to hold the job.
2404		
2405	<b>resourcesAreNotReady</b>	<b>0x10080</b>
2406		At least one of the resources needed by the job, such as media, fonts, resource objects,
2407		etc., is not ready on any of the physical devices for which the job is a candidate. This
2408		condition MAY be detected when the job is accepted, or subsequently while the job is
2409		<b>pending</b> or <b>processing</b> , depending on implementation.
2410		
2411	<b>deviceStoppedPartly</b>	<b>0x200100</b>
2412		One or more, but not all, of the devices to which the job is assigned are stopped. If all of
2413		the devices are stopped (or the only device is stopped), the <b>deviceStopped</b> reason
2414		SHALL be used.
2415		
2416	<b>deviceStopped</b>	<b>0x400200</b>
2417		The device(s) to which the job is assigned is (are all) stopped.
2418		
2419	<b>jobInterpreting</b>	<b>0x800</b>
2420		<u>The device to which the job is assigned is interpreting the document data.</u>
2421		
2422	<b>jobPrinting</b>	<b>0x1000400</b>
2423		The output device <u>to which the job is assigned</u> is marking media. This attribute is useful
2424		for servers and output devices which spend a great deal of time processing (1) when no
2425		marking is happening and then want to show that marking is now happening or (2) when
2426		the job is in the <u>process of being</u> canceled or aborted <u>while the job remains in the</u>
2427		<u>processing</u> state, but the marking has not yet stopped so that impression or sheet counts
2428		are still increasing for the job.
2429		
2430	<b>jobCanceledByUser</b>	<b>0x2000800</b>
2431		The job was canceled by the <u>owner of the job</u> user, i.e., by <del>an unknown user or by</del> a user

2432	whose name is the same as the value of the job's <b>jmJobOwner</b> object, <u>or by some other</u>	
2433	<u>authorized end-user, such as a member of the job owner's security group.</u>	
2434		
2435	<b>jobCanceledByOperator</b>	<b>0x41000</b>
2436	The job was canceled by the operator, i.e., by a user <u>who has been authenticated as having</u>	
2437	<u>operator privileges (whether local or remote) whose name is different than the value of the</u>	
2438	<u>job's <b>jmJobOwner</b> object.</u>	
2439		
2440	<b>jobCanceledAtDevice</b>	<b>0x8000</b>
2441	<u>The job was canceled by an unidentified local user, i.e., a user at a console at the device.</u>	
2442		
2443	<b>abortedBySystem</b>	<b>0x100002000</b>
2444	The job <u>(1) is in the process of being aborted, (2) has been</u> <del>was</del> <u>aborted by the system and</u>	
2445	<u>placed in the 'aborted' state, or (3) has been aborted by the system and placed -</u>	
2446		
2447	<del>NOTE—When the system puts a job into the 'aborted' job state, this reason is not needed. This reason is</del>	
2448	<del>needed only when the system aborts a job, but, instead of placing the job in the <b>aborted</b> job state, places</del>	
2449	<del>the job in the 'pendingHeld' state, so that a user or operator can manually try the job again.</del>	
2450		
2451	<b>processingToStopPoint</b>	<b>0x200004000</b>
2452	The requester has issued an operation to cancel or interrupt the job or the server/device	
2453	has aborted the job, but the server/device is still performing some actions on the job until a	
2454	specified stop point occurs or job termination/cleanup is completed.	
2455		
2456	This reason is recommended to be used in conjunction with the <u>processing canceled or</u>	
2457	<u><b>aborted</b> job state to indicate that the server/device is still performing some actions on the</u>	
2458	<u>job <del>while</del>after the job <del>remains in</del>leaves the <b>processing</b> state. After all the , so that some of</u>	
2459	<u>the job's resources consumed counters <del>may have stopped still be</del> incrementing, the</u>	
2460	<u>server/device moves the job from the <b>processing</b> state to , while the job is in the <b>canceled</b></u>	
2461	<u>or <b>aborted</b> job states.</u>	
2462		
2463	<b>serviceOffLine</b>	<b>0x40000</b>
2464	<u>The service or document transform is off-line and accepting no jobs. All <b>pending</b> jobs are</u>	
2465	<u>put into the <b>pendingHeld</b> state. This situation could be true if the service's or document</u>	
2466	<u>transform's input is impaired or broken.</u>	
2467		
2468	<b>jobCompletedSuccessfully</b>	<b>0x80000</b>
2469	The job completed successfully.	
2470		
2471	<b>jobCompletedWithWarnings</b>	<b>0x100000</b>
2472	The job completed with warnings.	
2473		
2474	<b>jobCompletedWithErrors</b>	<b>0x200000</b>
2475	The job completed with errors (and possibly warnings too).	
2476		
2477		
2478	The following additional job state reasons have been added to represent job states that are in	
2479	ISO DPA[iso-dpa] and other job submission protocols:	

2480  
 2481 | **jobPaused** **0x40000**  
 2482 | The job has been indefinitely suspended by a client issuing an operation to suspend the job  
 2483 | so that other jobs may proceed using the same devices. The client MAY issue an  
 2484 | operation to resume the paused job at any time, in which case the agent SHALL remove  
 2485 | the **jobPaused** values from the job's **jmJobStateReasons1** object and the job is eventually  
 2486 | resumed at or near the point where the job was paused.  
 2487 |  
 2488 | **jobInterrupted** **0x80000**  
 2489 | The job has been interrupted while processing by a client issuing an operation that  
 2490 | specifies another job to be run instead of the current job. The server or device will  
 2491 | automatically resume the interrupted job when the interrupting job completes.  
 2492 |  
 2493 | **jobRetained** **0x100000**  
 2494 | The job is being retained by the server or device with all of the job's document data (and  
 2495 | submitted resources, such as fonts, logos, and forms, if any). Thus a client could issue an  
 2496 | operation to the server or device to either (1) re-do the job (or a copy of the job) on the  
 2497 | same server or device or (2) resubmit the job to another server or device. When a client  
 2498 | could no longer re-do/resubmit the job, such as after the document data has been  
 2499 | discarded, the agent SHALL remove the **jobRetained** value from the  
 2500 | **jmJobStateReasons1** object."  
 2501 | REFERENCE  
 2502 | "These bit definitions are the equivalent of a type 2 enum except that combinations of bits may  
 2503 | be used together. See section 3.6.1.2. The remaining bits are reserved for future  
 2504 | standardization and/or registration."  
 2505 |  
 2506 | SYNTAX **INTEGER(0..2147483647)** -- 31 bits, all but sign bit  
 2507 |  
 2508 |  
 2509 |  
 2510 |  
 2511 |  
 2512 | **JmJobStateReasons2TC** ::= TEXTUAL-CONVENTION  
 2513 | STATUS current  
 2514 | DESCRIPTION  
 2515 | "This textual-convention is used with the **jobStateReasons2** attribute to provides additional  
 2516 | information regarding the **jmJobState** object. See the description under  
 2517 | **JmJobStateReasons1TC** for additional information that applies to all reasons.  
 2518 |  
 2519 | The following standard values are defined (in hexadecimal) as *powers of two*, since multiple  
 2520 | values may be used at the same time:  
 2521 |  
 2522 | **cascaded** **0x1**  
 2523 | An outbound gateway has transmitted all of the job's job and document attributes and data  
 2524 | to another spooling system.  
 2525 |  
 2526 | **deletedByAdministrator** **0x2**  
 2527 | The administrator has deleted the job.  
 2528 |

2529	<b>discardTimeArrived</b>	<b>0x4</b>
2530	The job has been deleted due to the fact that the time specified by the job's job-discard-time attribute has arrived.	
2531		
2532		
2533	<b>postProcessingFailed</b>	<b>0x8</b>
2534	The post-processing agent failed while trying to log accounting attributes for the job; therefore the job has been placed into the completed state with the <b>jobRetained</b>	
2535	<b>jmJobStateReasons1</b> object value for a system-defined period of time, so the	
2536	administrator can examine it, resubmit it, etc.	
2537		
2538		
2539	<b><u>jobTransforming</u></b>	<b><u>0x10</u></b>
2540	<u>The server/device is interpreting document data and producing another electronic</u>	
2541	<u>representation.</u>	
2542		
2543	<del><b>submissionInterrupted</b></del>	<del><b>0x10</b></del>
2544	<del>Indicates that the job was not completely submitted for some unforeseen reason, such as:</del>	
2545	<del>(1) the server has crashed before the job was closed by the client, (2) the server or the</del>	
2546	<del>document transfer method has crashed in some non-recoverable way before the document</del>	
2547	<del>data was entirely transferred to the server, (3) the client crashed or failed to close the job</del>	
2548	<del>before the time-out period.</del>	
2549		
2550	<b>maxJobFaultCountExceeded</b>	<b>0x20</b>
2551	The job has faulted several times and has exceeded the administratively defined fault count	
2552	limit.	
2553		
2554	<b>devicesNeedAttentionTimeOut</b>	<b>0x40</b>
2555	One or more document transforms that the job is using needs human intervention in order	
2556	for the job to make progress, but the human intervention did not occur within the site-	
2557	settable time-out value.	
2558		
2559	<b>needsKeyOperatorTimeOut</b>	<b>0x80</b>
2560	One or more devices or document transforms that the job is using need a specially trained	
2561	operator (who may need a key to unlock the device and gain access) in order for the job to	
2562	make progress, but the key operator intervention did not occur within the site-settable	
2563	time-out value.	
2564		
2565	<b>jobStartWaitTimeOut</b>	<b>0x100</b>
2566	The server/device has stopped the job at the beginning of processing to await human	
2567	action, such as installing a special cartridge or special non-standard media, but the job was	
2568	not resumed within the site-settable time-out value and the server/device has transitioned	
2569	the job to the <b>pendingHeld</b> state.	
2570		
2571	<b>jobEndWaitTimeOut</b>	<b>0x200</b>
2572	The server/device has stopped the job at the end of processing to await human action,	
2573	such as removing a special cartridge or restoring standard media, but the job was not	
2574	resumed within the site-settable time-out value and the server/device has transitioned the	
2575	job to the completed state.	
2576		

2577	<b>jobPasswordWaitTimeOut</b>	<b>0x400</b>
2578	The server/device has stopped the job at the beginning of processing to await input of the	
2579	job's password, but the password was not received within the site-settable time-out value.	
2580		
2581	<b>deviceTimedOut</b>	<b>0x800</b>
2582	A device that the job was using has not responded in a period specified by the device's	
2583	site-settable attribute.	
2584		
2585	<b>connectingToDeviceTimeOut</b>	<b>0x1000</b>
2586	The server is attempting to connect to one or more devices which may be dial-up, polled,	
2587	or queued, and so may be busy with traffic from other systems, but server was unable to	
2588	connect to the device within the site-settable time-out value.	
2589		
2590	<b>transferring</b>	<b>0x2000</b>
2591	The job is being transferred to a down stream server or <u>downstream</u> device.	
2592		
2593	<b>queuedInDevice</b>	<b>0x4000</b>
2594	The <u>server/device has job has been</u> queued <u>the job</u> in a down stream server or <u>downstream</u>	
2595	device.	
2596		
2597	<b><u>jobQueued</u></b>	<b><u>0x8000</u></b>
2598	<u>The server/device has queued the document data.</u>	
2599		
2600	<b>jobCleanup</b>	<b>0x108000</b>
2601	The server/device is performing cleanup activity as part of ending normal processing.	
2602		
2603	<b>jobPasswordWait</b>	<b>0x20000</b>
2604	The server/device has selected the job to be next to process, but instead of assigning	
2605	resources and starting the job processing, the server/device has transitioned the job to the	
2606	<b>pendingHeld</b> state to await entry of a password (and dispatched another job, if there is	
2607	one).	
2608		
2609	<b>validating</b>	<b>0x40000</b>
2610	The server/device is validating the job <i>after</i> accepting the job.	
2611		
2612	<b>queueHeld</b>	<b>0x80000</b>
2613	The operator has held the entire job set or queue.	
2614		
2615	<b>jobProofWait</b>	<b>0x100000</b>
2616	The job has produced a single proof copy and is in the <b>pendingHeld</b> state waiting for the	
2617	requester to issue an operation to release the job to print normally, obeying any job and	
2618	document copy attributes that were originally submitted.	
2619		
2620	<b>heldForDiagnostics</b>	<b>0x200000</b>
2621	The system is running intrusive diagnostics, so that all jobs are being held.	
2622		
2623	<b><u>serviceOffLine</u></b>	<b><u>0x400000</u></b>
2624	<u>The service/document transform is off-line and accepting no jobs. All pending jobs are put</u>	
2625	<u>into the pendingHeld state. This could be true if its input is impaired or broken.</u>	

2626  
 2627       **noSpaceOnServer**                               **0x800000**  
 2628               There is no room on the server to store all of the job.  
 2629

2630       **pinRequired**                                       **0x1000000**  
 2631               The System Administrator settable device policy is (1) to require PINs, and (2) to hold  
 2632               jobs that do not have a pin supplied as an input parameter when the job was created.  
 2633

2634       **exceededAccountLimit**                               **0x2000000**  
 2635               The account for which this job is drawn has exceeded its limit. This condition SHOULD  
 2636               be detected before the job is scheduled so that the user does not wait until his/her job is  
 2637               scheduled only to find that the account is overdrawn. This condition MAY also occur  
 2638               while the job is processing either as processing begins or part way through processing.  
 2639

2640       **heldForRetry**                                       **0x4000000**  
 2641               The job encountered some errors that the server/device could not recover from with its  
 2642               normal retry procedures, but the error might not be encountered if the job is processed  
 2643               again in the future. Example cases are phone number busy or remote file system in-  
 2644               accessible. For such a situation, the server/device SHALL transition the job from the  
 2645               **processing** to the **pendingHeld**, rather than to the **aborted** state.  
 2646

2647       The following values are from the X/Open PSIS draft standard:  
 2648

2649       **canceledByShutdown**                               **0x8000000**  
 2650               The job was canceled because the server or device was shutdown before completing the  
 2651               job.  
 2652

2653       **deviceUnavailable**                               **0x10000000**  
 2654               This job was aborted by the system because the device is currently unable to accept jobs.  
 2655

2656       **wrongDevice**                                       **0x20000000**  
 2657               This job was aborted by the system because the device is unable to handle this particular  
 2658               job; the spooler SHOULD try another device or the user should submit the job to another  
 2659               device.  
 2660

2661       **badJob**   **0x40000000**  
 2662               This job was aborted by the system because this job has a major problem, such as an ill-  
 2663               formed PDL; the spooler SHOULD not even try another device. "  
 2664       REFERENCE  
 2665               "These bit definitions are the equivalent of a type 2 enum except that combinations of them may  
 2666               be used together. See section 3.6.1.2. See the description under **JmJobStateReasons1TC** and  
 2667               the **jobStateReasons2** attribute."

 2921     SYNTAX     OCTET STRING(SIZE(48))  
 2922     MAX-ACCESS not-accessible  
 2923     STATUS     current  
 2924     DESCRIPTION  
 2925         "A quasi-unique 48-octet fixed-length string ID which identifies the job within a particular  
 2926         client-server environment. There are multiple formats for the **jmJobSubmissionID**. Each  
 2927         format SHALL be uniquely identified. See the JmJobSubmissionIDTypeTC textual convention.  
 2928         Each format SHALL be registered using the procedures of a type 2 enum. See section 3.6.3  
 2929         entitled: 'IANA Registration of Job Submission Id Formats'.  
 2930  
 2931         If the requester (client or server) does not supply a job submission ID in the job submission  
 2932         protocol, then the recipient (server or device) SHALL assign a job submission ID using any of  
 2933         the standard formats that have been reserved ~~forte~~ agents and adding the final 8 octets to  
 2934         distinguish the ID from others submitted from the same requester.  
 2935  
 2936         The monitoring application, whether in the client or running separately, MAY use the job  
 2937         submission ID to help identify which **jmJobIndex** was assigned by the agent, i.e., in which row  
 2938         the job information is in the other tables.  
 2939  
 2940         NOTE - fixed-length is used so that a management application can use a shortened GetNext  
 2941         varbind (in SNMPv1 and SNMPv2) in order to get the next submission ID, disregarding the  
 2942         remainder of the ID in order to access jobs independent of the trailing identifier part, e.g., to get  
 2943         all jobs submitted by a particular **jmJobOwner** or submitted from a particular MAC address."  
 2944     REFERENCE

3228                and/or both, as specified in the **JmAttributeTypeTC** textual-convention.  
3229  
3230                The agent SHALL create rows in the **jmAttributeTable** as the server or device is able to  
3231                discover the attributes either from the job submission protocol itself or from the document PDL.  
3232                As the documents are interpreted, the interpreter MAY discover additional attributes and so the  
3233                agent adds additional rows to this table. As the attributes that represent resources are actually  
3234                consumed, the usage counter contained in the **jmAttributeValueAsInteger** object is  
3235                incremented according to the units indicated in the description of the **JmAttributeTypeTC**  
3236                enum.  
3237  
3238                The agent SHALL maintain each row in the **jmJobTable** for at least the minimum time after a  
3239                job completes as specified by the **jmGeneralAttributePersistence** object.  
3240  
3241                Zero or more entries SHALL exist in this table for each job in a job set."  
3242       REFERENCE  
3243            "See Section 3.3 entitled 'The Attribute Mechanism' for a description of the **jmAttributeTable**."

3282 STATUS current  
3283 DESCRIPTION  
3284 "A running 16-bit index of the attributes of the same type for each job. For those attributes with  
3285 only a single instance per job, this index value SHALL be **1**. For those attributes that are a  
3286 single value per document, the index value SHALL be the document number, starting with **1** for  
3287 the first document in the job. Jobs with only a single document SHALL use the index value of  
3288 **1**. For those attributes that can have multiple values per job or per document, such as  
3289 **documentFormatIndex(37)** or **documentFormat(38)**, the index SHALL be a running index  
3290 for the job as a whole, starting at **1**."  
3291 ::= { jmAttributeEntry 2 }  
3292  
3293 **jmAttributeValueAsInteger** OBJECT-TYPE  
3294 SYNTAX **Integer32(-2..2147483647)**  
3295 MAX-ACCESS read-only  
3296 STATUS current  
3297 DESCRIPTION  
3298 "The integer value of the attribute. The value of the attribute SHALL be represented as an  
3299 integer if the enum description in the **JmAttributeTypeTC** textual-convention definition has the  
3300 tag: 'INTEGER:'.  
3301

3302 Depending on the enum definition, this object value MAY be an integer, a counter, an index, or  
 3303 an enum, depending on the **jmAttributeTypeIndex** value. The units of this value are specified  
 3304 in the enum description.  
 3305

3306 For those attributes that are accumulating job consumption as the job is processed as specified in  
 3307 the **JmAttributeTypeTC** textual-convention, SHALL contain the final value after the job  
 3308 completes processing, i.e., this value SHALL indicate the total usage of this resource made by  
 3309 the job.  
 3310

3311 A monitoring application is able to copy this value to a suitable longer term storage for later  
 3312 processing as part of an accounting system.  
 3313

3314 Since the agent MAY add attributes representing resources to this table while the job is waiting  
 3315 to be processed or being processed, which can be a long time before any of the resources are  
 3316 actually used, the agent SHALL set the value of the **jmAttributeValueAsInteger** object to **0**  
 3317 for resources that the job has not yet consumed.  
 3318

3319 Attributes for which the concept of an integer value is meaningless, such as **fileName(34)**,  
 3320 **jobName**, and **processingMessage**, do *not* have the 'INTEGER:' tag in the  
 3321 **JmAttributeTypeTC** definition and so an agent SHALL always return a value of '-1' to indicate  
 3322 'other' for the value of the **jmAttributeValueAsInteger** object for these attributes.  
 3323

3324 For attributes which do have the 'INTEGER:' tag in the **JmAttributeTypeTC** definition, if the  
 3325 integer value is not (yet) known, the agent either (1) SHALL not materialize the row in the  
 3326 **jmAttributeTable** until the value is known or (2) SHALL return a '-2' to represent an  
 3327 'unknown' counting integer value, a '0' to represent an 'unknown' index value, and a '2' to  
 3328 represent an 'unknown(2)' enum value."  
 3329 ::= { jmAttributeEntry 3 }  
 3330

3331 **jmAttributeValueAsOctets** OBJECT-TYPE  
 3332 SYNTAX OCTET STRING(SIZE(0..63))  
 3333 MAX-ACCESS read-only  
 3334 STATUS current  
 3335 DESCRIPTION  
 3336 "The octet string value of the attribute. The value of the attribute SHALL be represented as an  
 3337 OCTET STRING if the enum description in the **JmAttributeTypeTC** textual-convention  
 3338 definition has the tag: 'OCTETS:'.  
 3339

3340 Depending on the enum definition, this object value MAY be a coded character set string (text),  
 3341 such as '**JmUTF8StringTC**', or a binary octet string, such as '**DateAndTime**'.  
 3342

3343 Attributes for which the concept of an octet string value is meaningless, such as  
 3344 **pagesCompleted**, do *not* have the tag 'OCTETS:' in the **JmAttributeTypeTC** definition and so  
 3345 the agent SHALL always return a zero length string for the value of the  
 3346 **jmAttributeValueAsOctets** object.  
 3347

3348 For attributes which do have the 'OCTETS:' tag in the **JmAttributeTypeTC** definition, if the  
 3349 OCTET STRING value is not (yet) known, the agent either SHALL not materialize the row in  
 3350 the **jmAttributeTable** until the value is known or SHALL return a zero-length string."

## 3428 5. Appendix A - Implementing the Job Life Cycle

3429 The job object has well-defined states and client operations that affect the transition between the  
3430 job states. Internal server and device actions also affect the transitions of the job between the job  
3431 states. These states and transitions are referred to as the job's *life cycle*.

3432 Not all implementations of job submission protocols have all of the states of the job model  
3433 specified here. The job model specified here is intended to be a superset of most implementations.  
3434 It is the purpose of the agent to map the particular implementation's job life cycle onto the one  
3435 specified here. The agent MAY omit any states not implemented. Only the **processing** and  
3436 **completed** states are required to be implemented by an agent. However, a conforming  
3437 management application SHALL be prepared to accept any of the states in the job life cycle  
3438 specified here, so that the management application can interoperate with any conforming agent.

3439 The job states are intended to be user visible. The agent SHALL make these states visible in the  
3440 MIB, but only for the subset of job states that the implementation has. Some implementations  
3441 MAY need to have sub-states of these user-visible states. The **jmJobStateReasons1** object and  
3442 the **jobStateReasonsN** ( $N=2..4$ ) attributes can be used to represent the sub-states of the jobs.

3443 Job states are intended to last a user-visible length of time in most implementations. However,  
3444 some jobs may pass through some states in zero time in some situations and/or in some  
3445 implementations.

3446 The job model does not specify how accounting and auditing is implemented, except to assume  
3447 that accounting and auditing logs are separate from the job life cycle and last longer than job  
3448 entries in the MIB. Jobs in the **completed**, **aborted**, or **canceled** states are not logs, since jobs in  
3449 these states are accessible via SNMP protocol operations and SHALL be removed from the Job  
3450 Monitoring MIB tables after a site-settable or implementation-defined period of time. An  
3451 accounting application MAY copy accounting information incrementally to an accounting log as a  
3452 job processes, or MAY be copied while the job is in the **canceled**, **aborted**, or **completed** states,  
3453 depending on implementation. The same is true for auditing logs.

3454 **The jmJobState object specifies the standard job states. The normal job state transitions**  
3455 **are shown in the state transition diagram presented in Table 1.**

## 3456 6. APPENDIX B - Support of the Job Submission ID in Job Submission 3457 Protocols

3458 This appendix lists the job submission protocols that support the concept of a job  
3459 submission ID and indicates the attribute used in that job submission protocol.

## 3460 6.1 Hewlett-Packard's Printer Job Language (PJL)

3461 Hewlett-Packard's Printer Job Language provides job-level printer control and printer  
3462 status information to applications. The PJL JOB command is used at the beginning of a  
3463 print job and can include options applying only to that job. A PJL JOB command option  
3464 has been defined to facilitate passing the **JobSubmissionID** with the print job, as required  
3465 by the Job Monitoring MIB. The option is of the form:

```
3466         SUBMISSIONID = "id string"  
3467  
3468
```

3469 Where the "id string" is a string and SHALL be enclosed in double quotes. The format is  
3470 as described for the **jmJobSubmissionID** object.

3471 The entire PJL JOB command with the optional parameter would be of the form:

```
3472         @PJL JOB SUBMISSIONID = "id string"  
3473  
3474
```

3475 See "Printer Job Language Technical Reference Manual", part number 5021-0328, from  
3476 Hewlett-Packard for complete information on the PJL JOB command and the Printer Job  
3477 Language.

3478 NOTE - Some PJL implementations wrap a banner page as a PJL job around a job  
3479 submitted by a client. In this case, there will be two job submission ids. The outer one  
3480 being the one with the banner page and the inner one being the original user's job. The  
3481 agent SHALL use the last received job submission ID for the **jmJobSubmissionID** index,  
3482 so that the original user's job submission ID will be used, not the banner page job ID.

## 3483 6.2 ISO DPA

3484 The ISO 10175 Document Printing Application (DPA) protocol specifies the "**job-client-  
3485 id**" attribute that allows the client to supply a text string ID for each job.

3619 **9. INDEX**

3620 This index includes the textual conventions, the objects, and the attributes. Textual  
 3621 conventions all start with the prefix: "JM" and end with the suffix: "TC". Objects all  
 3622 starts with the prefix: "jm" followed by the group name. Attributes are identified with  
 3623 enums, and so start with any lower case letter and have no special prefix.
