Supported Distributions: (earlier)
Supported Distributions: (current)

- Debian
- OpenSuse
- Fedora
- Ubuntu
- Red Hat
- Suse Enterprise Server
CUPS based Lexmark Print Driver for Linux:

- Create Print Queues over USB, wired and wireless network (IPv4, IPv6), network discovery.
- Responsible for providing custom print and fax driver for Linux that enables customers to print, fax & maintain their single and multi-function printers.
- Options to choose the paper type and the print quality as per the user’s choice.
- Allow various finishing options like staple, hole punch, separator pages etc. for segregating multiple print outputs and handling the printed out documents in better way, user is able collect multiple sets of print jobs from different output bins as well.
- Supported features like “Print & Hold” through which user is able to store, verify, reserve his print jobs in printer's memory and print later after providing certain credentials.
- Job Accounting feature which lets user track print jobs by associating them with a user name or ID, an account code, and a department code. By associating print jobs with specific account information, admin user can enforce quotas on the print jobs that users can send.
Supported UI Features:

- **Quality:**
  - Resolution
  - Halftone
  - Toner Darkness
  - Mirror
